To Comandante Chávez, whose words, orientations, and exemplary dedication to the cause of the poor will serve as a compass for his people and all the people of the world. It will be the best shield to defend ourselves from those who seek to destroy this marvelous work that he began to build.

## *Introduction*

I completed this book one month after the physical disappearance of President Hugo Chávez, without whose intervention in Latin America this book could not have been written. Much of what you will read here is related in one way or another to the Bolivarian leader, to his ideas and actions, within Venezuela and at the regional and global level. Nobody can deny that there is a huge difference between the Latin America that Chávez inherited and the Latin America he left for us today.

By the time Chávez won the 1998 presidential elections, the neoliberal capitalist model was already foundering. The choice then was whether to reestablish the neoliberal capitalist model—undoubtedly with some changes, such as greater concern for social issues, but still motivated by the same logic of profit-seeking—or to go ahead and try to build another model. It was President Chávez who had the courage to call this alternative to capitalism “socialism,” in spite of its negative connotations. He called it “21st century socialism,” adding the adjective “21st century” to differentiate this new socialism from the errors and deviations that occurred in implementing twentieth-century socialism. This new socialism should not “fall into the errors of the past,” and commit the same “Stalinist deviations” whereby the party became bureaucratized and ended up eliminating popular protagonism.

Like Peruvian socialist José Carlos Mariátegui, Chávez believed that 21st century socialism could not be a “carbon copy”; rather, it had to be a “heroic creation,” which is why he spoke of a Bolivarian, Christian, Robinsonian, and Amerindian socialism. He conceived of socialism as a new collective way of life, where equality, freedom, and real and profound democracy reign; where the people play the role of protagonist; where the economic system is centered on human beings, not on profits; and where a pluralistic, anti-consumerist culture exists, in which being takes precedence over owning.

The need for people’s participation was a recurring theme in the Venezuelan president’s speeches and was an element that distinguished his proposals for democratic socialism from others. He was convinced that participation in all spheres is what allows human beings to grow and achieve self-confidence, that is, develop themselves as human beings.

But these would have remained mere words if Chávez had not promoted the creation of suitable spaces for participatory processes to flourish. That is why his initiative to create communal councils (self-managed community spaces), workers’ councils, student councils, and peasant councils was central to the emergence of a truly collective structure; one that ultimately should express itself as a new form of decentralized state, with communes as its fundamental building blocks.

Chávez was not naïve, as some might think. He knew that the forces opposed to this project were tremendously powerful. However, being a realist does not mean one must accept the conservative vision of politics that sees it as simply the art of the possible. For Chávez, the art of politics was to make the impossible possible, not by sheer willpower, but by taking the existing reality as one’s starting point and working to build favorable conditions and a correlation of social forces capable of changing that reality. He knew that to make possible in the future what today appears impossible required changing the correlation of forces at both the national and the international level. While in government, he

worked masterfully to achieve this, understanding that to build political power, agreements among top leaders were not enough—the most important task was building up the correlation of social forces. The Venezuelan leader understood that an alternative society to capitalism simultaneously required an alternative globalization to neoliberal globalization. He never sought to build socialism in one country. Chávez was completely clear that this was not possible, which is why he put such an emphasis on shifting the correlation of forces at both the regional and international level.

He quickly perceived the particularities of the transition process under way in his country, one that served as a precursor for similar processes in other Latin American countries. Among them was the understanding that the transition process did not start from zero; its starting point was the inherited state apparatus, the inherited economic system and the inherited culture. In order to take the institutional road, the first step therefore had to be to change the rules of the institutional game. From there, the immense obstacles on that route, which he knew would arise, had to be overcome. He understood that a strong state is required in order to progress toward a society in which the state is no longer an institution dominating society but is instead an instrument serving society, and controlled by society. Starting with this strong state, it would become possible to create the international conditions to achieve national sovereignty and continental integration. This state drives forward the transition from the inherited institutions toward new ones that can create the conditions for building the new society—a new constitution, a new body of laws, greater development of local powers, etc. And the most important thing is that from this inherited state, now staffed by revolutionary cadres, encouragement can be given to promoting people's organizations and protagonism, essential elements for building a new state from below.

Many of these ideas will be further developed in this book, which updates, expands upon, and delves deeper into topics I addressed in "Latin America and Twenty-First Century Socialism: Inventing to Avoid Mistakes," published in the Summer 2010 issue

of *Monthly Review*. I have incorporated into this new version paragraphs from my most recent articles.<sup>1</sup>

The book consists of three parts. The first part, *Latin America Advances*, is a brief recounting of what has occurred in Our America during these last decades: the modification of the political map, the social mobilizations that explain these changes, the indications that there has been a change in the correlation of forces between the United States and our region, and the attempts being made by the largest imperial power in the world to recolonize and dominate our subcontinent. Part One finishes with a typology of Latin American governments, because I think that rather than framing governments within a certain classification, it is more important to evaluate their performance, always keeping in mind the correlation of forces in which they operate. This requires us to focus less on the pace at which these governments are implementing change and more on the direction in which they are heading, as the pace will largely depend on how they deal with the obstacles they encounter.

Part Two, *Where Are We Going: Tweny-First Century Socialism*, tries to help the reader understand the value of talking about socialism even if the word has such a negative connotation; which parts of the original Marxist thought ought to be rescued; which new ideas have arisen out of the experiences of some of the Latin American governments; the characteristics of the transition we are living in; what these governments can do in spite of the big limitations facing them; and finally, what criteria to take into account in assessing their performance. I believe all these elements can help us find our way.

Part Three, *A New Political Instrument for a New Hegemony*, deals with the topic of how to achieve the necessary correlation of forces for overcoming obstacles in building the new society, and the relationship this has with the topic of the new hegemony. I argue that in many places of the world, the cultural hegemony of the bourgeoisie is breaking down, but this does not necessarily mean that a new popular hegemony has emerged in its place. This

will not occur spontaneously. A political instrument is needed, a political organization that can help us construct this new hegemony. Aware of the existing, widespread rejection of politics and politicians, I explain that here I am not talking about the traditional parties of Old Left, but of a new political form that does not manipulate the social movements but rather puts itself at their service. I outline why the existence of a political instrument is necessary for the construction of 21st century socialism, what its main tasks are, and what kind of activist and political culture we need today. In doing so, I argue that it is fundamental to combat the bureaucratic style that leaders of political organizations and governments usually fall into and defend the need for public criticism to prevent this from happening.

It should be noted that the basic ideas in this book do not come from reading numerous texts—although it is evident that I have incorporated ideas and research from valuable intellectuals. Rather, this work is a result of having been able to study firsthand the diverse struggles and practical experiences of various countries of Our America.

Many anonymous collaborators have contributed to this book. I would like to give a special mention to my compañero Michael Lebowitz, many of whose ideas I have incorporated into this book, and Ximena la Barra who read over the final version of the book and provided me with some invaluable suggestions and contributions. I thank all those who, true to their revolutionary passion, whether in the area of research or activism, have made this book possible. My great hope is that this effort contributes a grain of sand in making possible a future—now not so distant—which a quarter of a century ago seemed impossible.

PART 1

---

# Latin America Advances

## *1. The Pioneer in Rejecting Neoliberalism*

Latin America was the first region in which neoliberal policies were introduced. Chile, my country, was used as a testing ground for neoliberal policies before prime minister Margaret Thatcher's government implemented them in the United Kingdom. But it was also the first region in the world that gradually came to reject those policies which only served to increase poverty, aggravate social inequalities, destroy the environment, and weaken working-class and popular movements in general.

It was in our subcontinent that left and progressive forces first began to rally after the collapse of socialism in Eastern Europe and the Soviet Union. After more than two decades of suffering, new hope was born. At first this took the form of struggles to resist neoliberal policies, but after a few years, people went on the offensive and began conquering spaces of power. Within Europe, itself in crisis and decline, sections of the impoverished masses have begun to see Latin America as a ray of hope.<sup>1</sup>

For the first time in Latin American history—and with the crisis of the neoliberal model as a backdrop—candidates from left and center-left groupings managed to win elections in most of the region's countries.

Let us remember that in 1998, when Chávez won elections in Venezuela, this country was a lonely island in a sea of neoliberalism

that covered the continent, except, of course, for the honorable exception of Cuba. Shortly after, Ricardo Lagos was elected in Chile (2000), Luiz Ignácio Lula da Silva in Brazil (2002), Néstor Kirchner in Argentina (2003), Tabaré Vázquez in Uruguay (2005), Evo Morales in Bolivia (2005 and 2009), Michelle Bachelet in Chile (2006), Rafael Correa in Ecuador (2006, 2009, and 2013), Daniel Ortega in Nicaragua (2006 and 2010), Cristina Fernández in Argentina (2007 and 2012), Álvaro Colom in Guatemala (2007), Fernando Lugo in Paraguay (2008), Mauricio Funes in El Salvador (2009), José Mujica in Uruguay (2009), Dilma Rousseff in Brazil (2010), and Ollanta Humala in Peru (2011)—and Chávez was reelected for the fourth time in 2012.<sup>2</sup>

I agree with Cuban theoretician Roberto Regalado that these leaders are heterogeneous. “In some countries such as Bolivia, Ecuador and Venezuela, the collapse or extreme weakness of neoliberal institutions brought to power leaders who capitalized on the left’s organizational and political capital to win the presidency. Then there were situations like in Honduras and Argentina where, because there were no presidential candidates from the popular sectors, progressive people from traditional parties won elections.”<sup>3</sup>

### POPULAR MOVEMENTS: THE GREAT PROTAGONISTS

We can say that in each and every country, albeit in different ways, popular movements and not political parties were at the forefront of the struggle against neoliberalism. Even in those countries where the role of left political parties was important, they were not in the vanguard of the fight against neoliberalism; the popular movements, however, were. These movements developed in the context of the neoliberal model’s crisis of legitimacy and the crisis its political institutions were facing. In many cases, they grew out of the dynamics of resistance present in their communities or local organizations.

*Overview of Key Mobilizations*

Let us briefly look back at some of the most important social struggles that helped pave the way for what we see today in Latin America. Without a doubt, this new reality stands in stark contrast to the solitary struggle waged by Fidel Castro in 1985 for the non-repayment of foreign debt.<sup>4</sup>

**El Caracazo, Venezuela.** On February 27, 1989, a tremendous social explosion took place in Venezuela in opposition to a package of neoliberal economic measures demanded by the International Monetary Fund and imposed by the government of Carlos Andrés Pérez. According to renowned French intellectual Ignacio Ramonet, the Venezuelan people “were the first in the world to rise up against the tyranny of neoliberalism,” and they did so at a time when the neoliberal model was on the rise globally.<sup>5</sup>

The package included, among other things, cuts to public spending, liberalization of prices and trade, promotion of foreign investment, and the privatization of state companies. But the most immediate cause for the popular rebellion was the increase in transport costs that resulted from the hike in petrol prices.

Residents from the poorest *barrios* (neighborhoods) came out onto the streets in huge numbers and began to burn buses, as well as loot and destroy supermarkets and shops. The military were called out to impose order. The *Caracazo*—as it was referred to because the rebellion had as its epicenter the capital of Venezuela, even though similar protests occurred in various other states—ended in a massacre of epic proportions and was a determining factor in the politicization of many young military officers.<sup>6</sup>

**Ecuador’s indigenous peoples spearhead the struggles of the 1990s.** By 1986, the disintegration of Ecuador’s workers’ movement and the Frente Unitario de los Trabajadores (United Front of Workers, FUT) as a result of neoliberalism was evident. Water, sewerage, and rubbish collection services were all privatized, and

thousands of municipal workers were fired. Yet while the workers' movement was on the decline, the level of conflict in the countryside was on the rise. The early 1990s saw the country become a powder keg, with a wave of land occupations occurring against latifundios and in favor of land reform.

The indigenous movement erupted onto the scene in 1990 with the occupation of the Santo Domingo Church. The occupation, which lasted ten days, gave national prominence to the demands of the indigenous people and forced the Rodrigo Borja government to open up a dialogue with the movement.

Shortly afterward, the indigenous movement began to raise demands of national concern such, as opposition to oil privatization, as well as other privatizations. Non-indigenous sectors, including neighborhood-based social movements and radical youth inspired by the ideas of liberation theology, began to accompany them in their protests. The broad Frente Patriótico (Patriotic Front) was initiated, within which CONAIE, the most important indigenous organization in the country, played a leading role.

In 1995, a broad coalition of social movements—indigenous, urban sectors, youth—formed the Coordinadora por el NO (NO Coalition) and successfully defeated a government-initiated referendum that sought to institutionalize neoliberalism. The proposal was rejected by 75 percent of voters.

Thanks to indigenous resistance against neoliberalism, the government was unable to privatize strategic companies in the areas of oil, electricity, and telecommunications. In 1997, the indigenous movement rose up and deposed President Abdalá Bucaram. The indigenous movement's proposal for a Constituent Assembly was accepted, but the right organized itself and successfully co-opted the process. Even though the June 1998 constitution recognized some rights for indigenous peoples, it also improved the institutional framework for deepening neoliberalism.

At the start of 2000, a peaceful indigenous uprising against privatization led to an occupation of the National Congress and forced the ouster of President Jamil Mahuad. The indigenous

movement gradually transformed itself into one of the central axes of political action and an indispensable factor for any attempt to transform the country.<sup>7</sup>

**Chile's Mapuche movement—in the front line of the struggle against neoliberalism.** The Mapuche, an indigenous people that inhabit the Araucanía region of Chile, were greatly affected by neoliberal agricultural policies imposed by the military dictatorship and successive Concertación—coalition of center-left—governments. Mapuche communities were not only driven off lands granted to them under the land reform program initiated by the Christian Democratic government of Eduardo Frei (1964–70) and continued by the Socialist government of Salvador Allende (1970–73), but were also affected by the process of economic liberalization and foreign direct investment in forestry, tourism, and energy mega-projects carried out in their territories. The immediate result of all this was the forced migration of entire communities, an increase in logging to the detriment of agricultural activities, soil degradation, water contamination, and environmental destruction.

At the beginning of the 1990s, the Consejo de Todas las Tierras (Council of All the Lands), a Mapuche organization, carried out various symbolic occupations of ancestral Mapuche lands that were now in private hands. Up until 1997, the demands of this social sector were confined to individual communities; however, from that year onward, “other forms of demands for territories emerged, where issues of land, natural resources, participation and development were all integrated.” This allowed the Mapuche movement to “develop a new discourse and construct supra-community alliances.” As Chilean investigator Víctor Toledo Llancaqueo said, the situation went from one of “lands in conflict” to “territories in conflict.”<sup>8</sup> “They were no longer simply demanding land, but rather a spatial continuum, a territory with its own water, species and cultivable soils, as well as their right to participate in decisions that affect their territory.”<sup>9</sup>

In order to contain these struggles, Concertación governments and the recent government of Sebastián Piñera made efforts to co-opt the movement through paternalistic welfare policies. Unable to defeat the Mapuche people via this route, they turned to open and systematic repression against Mapuche communities and leaders, a number of whom ended up in prison.<sup>10</sup> From there emerged another form of struggle: hunger strikes. A hunger strike begun in March 2006 by three indigenous leaders and a theologian, Patricia Troncoso, who became a symbol of the Mapuche struggle against the state, had big repercussions across the world. Since then, these types of protests have represented a continuous form of pressuring the government to listen to their demands.

**Referendum against privatization triumphs in Uruguay.** In December 1992, one of the first successful struggles against neoliberalism took place: the little known triumph of the Uruguayan people in a referendum that repealed a law passed the previous year authorizing the privatization of large public companies.<sup>11</sup>

The Frente Amplio (Broad Front) waged a formidable propaganda campaign, including via numerous televised debates, to explain what privatization entailed and the reasons why it was dangerous. This meant that when people voted, they knew what project for the country they were voting for. That is why various commentators dubbed this Uruguay's first modern election.

The referendum united 70 percent of voters, from a truly diverse political background, behind a movement with tremendous political potential. This broad base of support was due to the fact that, following big debates within the leadership, the Frente Amplio decided not to challenge the entire law and its thirty articles, as the more radical currents were proposing, but rather to focus on the five key clauses that referred to strategic companies.

At the same time, this political organization understood that a media campaign was not enough, that it was necessary to meticulously campaign, going neighborhood to neighborhood, and, as much as possible, house to house. Retired workers, who represent

a significantly large part of the Uruguayan population, played a big role in this task

Two years later, in 1994, the government attempted to modify the constitution in order to facilitate the deepening of neoliberalism. Retired workers, a social sector severely affected by the privatization of the social security system, were once again one of the forces to oppose this, carrying out a tremendous grassroots campaign, particularly in the interior of the country. A large number of experienced and excellent trade union leaders helped create the Organización Nacional de Jubilados (National Organization of Retired Workers), which prepared itself for battle and mobilized across the country. As all their members were retired, they had all day to actively campaign.<sup>12</sup> In the end, the government's initiative was rejected.

**EZLN fights against NAFTA in Mexico.** On January 1, 1994, in the indigenous southeastern Mexican town of Chiapas, the Ejército Zapatista de Liberación Nacional (Zapatista National Liberation Army, EZLN) erupted onto the scene, raising the banner of opposition to the North American Free Trade Agreement (NAFTA). Irrespective of how successful their struggle has been, I believe that this movement was critical to shedding light on the oppression and discrimination that Mexico's indigenous peoples have endured. Moreover, everyone recognizes the spectacular initiatives the ELZN has promoted on the international sphere, provoking great sympathy and support for their cause, especially among intellectuals and students. The EZLN has been capable not only of building social force in the areas they operate in, but also of influencing public opinion at the national and international level, something that, on many occasions, the left has not been able to do.<sup>13</sup>

**Brazil's MST—the key national movement in the fight against neoliberalism.** In Brazil, the Movimento dos Trabalhadores Rurais Sem Terra (Movement of Rural Landless Workers, MST) consolidated itself as the key national reference point in the struggle

against neoliberalism, promoting the coming together of all those sectors excluded by the system: the landless, the homeless, the unemployed.<sup>14</sup> Attacked from the right for its radicalism, the MST is nevertheless respected by an increasingly broad cross-section of society that finds in this movement a political coherence and concern with ideological aspects largely lacking in leftist political parties.

Although its struggles date back to the mid-1980s, the movement started to gain national and international prominence following its third congress in 1995, at which it put forward the proposition that there would be no land reform in Brazil unless the neoliberal economic model was changed, and that it was only possible to advance in that direction if all of society began to see the struggle for land as a legitimate and necessary struggle.

The MST understood that to halt the advance of neoliberalism, it was necessary to establish a broad policy of alliances at both national and international levels. Going beyond mere words, the MST transformed itself into one of the most prominent promoters of important mobilizations. Referendums on foreign debt and against the Free Trade of the Americas Agreement (FTAA), and its struggle against genetically modified organisms (GMOs), have allowed the MST to establish alliances with campesino organizations the world over.<sup>15</sup>

**Water War in Bolivia.** In 2000, the so-called Water War exploded in Bolivia, the country that had most faithfully implemented the neoliberal structural adjustment model in our subcontinent, according to one of the model's key architects, Jeffrey Sachs.<sup>16</sup>

Following a series of privatizations of public companies, the city of Cochabamba, the third largest in the country, rose up against water privatization. The revolt ended only when the Bolivian government decided to backtrack and revoke the concession granted to Aguas de Tunari.

According to Mexican investigator Ana Esther Ceceña: "Within a short timeframe, the entire city had organized a revolt

which brought together all social sectors. The multitude took over the city and impeded the entrance of security forces until the government backtracked on the concession and agreed to the city's water being jointly managed with representatives of the mobilized populace.<sup>17</sup>

This rebellion was the first in a wave of broad popular mobilizations: the uprising of the Aymara indigenous peoples in the Altiplano; protests in defense of coca by the *cocaleros* (coca growers) of the Chapare region, led by Evo Morales, who went on to gain national and international prominence; the police rebellion; the gas war; and other uprisings in El Alto and by indigenous campesinos in 2003. All of these mobilizations culminated in Evo Morales's victory in the 2005 presidential elections.

**Referendum against foreign debt and the FTAA in Brazil.** Within the framework of the Jubilee 2000 campaign, six million Brazilians participated in a national referendum against the foreign debt, with more than 90 percent voting for non-payment.<sup>18</sup> A number of the groups that organized the campaign—which included a considerable number of popular movements and some parties and religious entities, such as the Conferência Nacional dos Bispos do Brasil (National Conference of Bishops of Brazil) and the Consejo Nacional de Iglesias Cristianas (National Council of Christian Churches)—went on to lead another initiative that soon took on a continental character: a national referendum against the FTAA. This informal referendum was held in September 2002 and signified both an important mobilization and unquestionable success: around 10 million people voted, of which 98 percent opposed the FTAA. This result can be explained by the huge educational campaign and mobilization prior to the popular referendum, carried out by more than 150,000 volunteer activists who facilitated pre-prepared educational courses and a grassroots campaign, many times going door-to-door to talk about the negative effects of the FTAA.<sup>19</sup>

Similar events, but on a smaller scale, were held in various Latin American countries, all asking the same question: Are you

in favor of the government signing the Free Trade of the Americas Agreement?

Without a doubt, this campaign of popular consciousness-raising and broad-based mobilization weighed heavily on the minds of Latin American leaders when, in 2004, they voted to reject this nefarious economic initiative being promoted by the U.S. government.

**Popular mobilizations in Argentina bring down four presidents.** Between 2001 and 2002, Argentina's popular sectors awoke from their slumber and, led by the *piqueteros*, an unemployed workers' movement that had emerged as a result of the effects of neoliberal measures, rose up against "dubious financial maneuvers, political cynicism and gross levels of governmental corruption, and brought down four presidents, one after another, within the space of a month. The protests extended and became generalized to include opposition to the whole political system, leading to a shared sense of satiety and sentiment that 'all of them must go.'"<sup>20</sup>

**Chilean student revolt against the neoliberal system and its education model.** In April 2006, Chilean high school students, feeling the effects of a deficient public education system, overcame the fear that continued to prevail in Chilean society following the long years of dictatorship and rose up across the country to question the education system. The "Penguin Rebellion," as it was known due to the dark pants and white shirts worn by students, was a watershed moment for Chilean society.

Although the movement was ultimately co-opted by the Bachelet government, these struggles became engraved in the minds of their protagonists. A number of leaders of the 2006 movement reappeared on the political scene during the 2011 university rebellion, with high school students soon jumping aboard. This new student uprising was neither spontaneous nor a creation of then student leader and Communist Party of Chile

member Camila Vallejo, as the international media tried to portray it; rather, it was the result of a “process of accumulation of social struggles,” such as the struggles for democratization in the 1990s, the first student uprisings of 2001, and the aforementioned Penguin Rebellion.<sup>21</sup>

Around 100,000 people came out to the streets in solidarity with the student movement and its struggle for an education system that was not geared toward profit-making, a level of national support not seen in recent times. This issue garnered a great deal of sympathy with the population. “Indebtedness,” said current Federación de Estudiantes de la Universidad de Chile (Federation of Students of the University of Chile, FECH) president Andrés Fielbaum, is not something that only affects students, but all of Chilean society, as this is “the manner in which people are paying for all their basic rights.”<sup>22</sup>

“It is not only the students that are rebelling, but also their family and all the people are definitely behind them.”<sup>23</sup> To use Chilean sociologist Tomás Moulián’s phrase, “Credit Card Man” is beginning to liberate himself from neoliberalism’s extremely well executed process of domestication.<sup>24</sup>

The 2011 mobilizations represented a qualitative leap forward. “Years ago we were only able to mobilize those that were already convinced, leftist activists or agitators, those that go to all the marches. This time around, many of the people that came on board had never in their life been on a march,” said FECH ex-president Gabriel Boric.<sup>25</sup> They also revealed the separation that exists between traditional political leaders and popular sentiment.<sup>26</sup>

The Chilean student movement has rejected the traditional way of doing politics. It no longer tolerates being manipulated by political parties. Decision making is carried out in a very democratic manner. In what has been referred to as an assembly process, ideas are openly discussed and decisions are made collectively. Moreover, leaders must constantly report back to the grassroots on how they have gone about implementing decisions that have been made. The role of *veedor* (overseer) has been created, a kind

of political commissar, but this time a commissar not linked to a political party, but to the popular movement. Their role is to exercise control over the leaders.

Another important achievement has been the movement's capacity to accept differences between various student groups and understand that it is necessary to unite in order to strike together and best advance the needs of the movement.

In the heat of the struggle, the student movement began to radicalize its demands: it not only questioned the nature of the education system and fought for free public education for all, but also began to question the global political system, placing on the political agenda the need for a constituent assembly to transform the rules of the political game (still intact from the dictatorship era). They also demanded the re-nationalization of copper, whose revenue could cover the costs of a free and quality education for all. That is, its basic aim was in the direction of "transforming the essence of the model."<sup>27</sup>

**Mexican state of Oaxaca rebels and establishes its own self-government.** In Mexico, the entire population of the state of Oaxaca rose up in June 2006 in opposition to the repression meted out against protesting teachers and demanded the resignation of the governor. The Asamblea Popular de los Pueblos de Oaxaca (Popular Assembly of the Peoples of Oaxaca, APPO) was formed, and for six months this Mexican territory "was converted into the Oaxaca Commune, with town meetings in the central plaza."<sup>28</sup>

**Mobilization of "los forajidos" in Ecuador.** In 2006 we also witnessed the mobilization of *los forajidos* (the outlaws) in Quito, Ecuador, protesting against Lucio Gutiérrez's betrayal of the anti-neoliberal program he campaigned for when he was first elected president with the support of popular and, in particular, indigenous movements.<sup>29</sup> There were a number of interesting elements in this popular rebellion. First, the main protagonists were not the social sectors that had supported Lucio and subsequently suffered

a big blow as a result of this negative experience; instead it was a mobilization “without a particularly defined reference point, and with a strong youth presence.” Second, it was characterized by “its network mode of organizing, above all between middle-class sectors, and including upper-class sectors motivated by a dose of racism.” Third, radio stations, in particular Radio La Luna, played the key role of collective organizers.<sup>30</sup>

A number of these mobilizations raised the demand for a constituent assembly, conscious of the limitations inherent in the existing institutions.

The constituent processes in Venezuela, Bolivia, and Ecuador, and endorsed by popular referendums, were able to count on a combination of effective leadership by popular and charismatic individuals elected to office and strong pressure from the popular bases capable of uniting, organizing, and mobilizing around their own agenda of justice and sovereignty.<sup>31</sup>

**The main lesson of these mobilizations.** Although many lessons can be drawn from these popular struggles, in my opinion one of the most important is the proven validity of a strategy of a broad coalition of forces that seeks to unite all those who can be united. The concrete objectives for the struggle are to elicit understandings among all these diverse groups, all with their own very different traditions and political practices.

### *Social Movements, Old and New*

What we saw in these resistance struggles was the emergence of new social movements alongside older ones, especially peasant and indigenous movements. These are pluralistic, in which elements of liberation theology, revolutionary nationalism, marxism, indigenism, and anarchism coexist. Having moved beyond focusing on specific, immediate issues that affected them as in the past, these movements took up national issues. This not only enriched their struggles and demands but also allowed

them to unite with diverse sectors, all of which were feeling the effects of the same system.

Missing in much of the Latin American political scene, except on rare occasions, was the traditional workers' movement, hit hard by the implementation of neoliberal economic measures such as precarious labor conditions and subcontracting. And on those occasions when workers did participate, it was not on the front lines of the political scene.

These movements generally started out from a position of rejecting politics and politicians, but as the process of struggle progressed, they gradually shifted from an apolitical stance of simply resisting neoliberalism to an increasingly political one of questioning established power, and in some cases, such as those of Pachakutik and Movimiento Alianza PAIS in Ecuador and the Movimiento al Socialismo (Movement Toward Socialism, MAS) in Bolivia, went as far as to build their own political instruments.

### NEOLIBERALISM LOSES LEGITIMACY IN LATIN AMERICA

Neoliberalism's heyday in our subcontinent has long gone. The "end of history" announced by Francis Fukuyama in 1989 never arrived.<sup>32</sup> The current global economic capitalist crisis is but one of the factors dealing a *coup de grâce* to that statement.

It is interesting to recall that though the fall of the Berlin wall, which occurred only months after Fukuyama made his statement, and the subsequent collapse of Soviet socialism seemed to prove him right, that same year the first social explosion against neoliberalism occurred in Venezuela, and was quickly followed by all the other social explosions mentioned above.

Although most governments in the region still hold to the general tenets of neoliberalism, very few defend this model. It lost legitimacy because it proved incapable of solving the most pressing problems facing our countries.

According to Emir Sader, there is a “hegemonic crisis” in Latin America, in which “the neoliberal model and the power bloc that led it are worn down, weakened, and only manage to survive by implementing the model in a toned-down form—for example in Brazil, Argentina, and Uruguay.”<sup>33</sup>

Given this, there appears to be only two alternatives: either capitalism is given a makeover, or we move towards an alternative economic project focused on satisfying human needs and making possible the kind of economic development in our region that benefits the overwhelming majority of our people, not the elites.

### *Bourgeois Liberal Democracy Loses Prestige*

The inability of the neoliberal economic model to obtain positive economic results for our peoples has also negatively affected the credibility of the political model of bourgeois democracy. People no longer have confidence in this form of government and are increasingly less willing to accept the enormous gap between those who get to elect and those who get elected.

As democratic regimes were losing credibility, traditional political parties began to face a crisis. People became cynical about politics and politicians. You can see this in the polls taken every year in Latin America by Latinobarómetro. In 1998, when Hugo Chávez was elected, only 37 percent of people in Latin America were satisfied with the democratic system; in Venezuela, the percentage was even lower (35 percent). Up until 2007, the average level of satisfaction in Latin America remained at 37 percent, whereas the level in Venezuela rose to 59 percent.

The 2008 Latinobarómetro poll shows satisfaction with democracy has risen to 82 percent in Venezuela.<sup>34</sup> It is somewhat paradoxical that in a country accused of being a dictatorship, such a large percentage of the population expresses its satisfaction with democracy. Moreover, it is interesting to see that the average level of satisfaction in other countries has gone from 37 percent to 57 percent. It doesn't seem out of place to conclude that, when

the policies implemented by left-wing governments begin to show results, people begin to have a different opinion about the democratic system. The 2011 Latinobarómetro report noted that support for democracy diminished somewhat across most Latin American countries, and that one of the causes may have been the economic problems faced by the region. Nevertheless, it is worth noting that although it fell 7 points in Venezuela (84 to 77 percent), this nation continues to have the highest satisfaction rating for democracy in the region, followed by Uruguay (75 percent) and Argentina (70 percent).

Another interesting phenomenon that the report highlights is the contrast between internationally held perceptions of certain governments and how their own people perceive these same governments:

In 2011, we saw how a citizen's demand emerged, leading to hundreds of thousands of Chileans coming onto the streets, firstly for [free] education, and afterward for many other motives including a demand for structural change, all of which has left a question mark hanging over the [government's] declared success and how it defines this. The Chilean case clearly demonstrates that there is no road to development that can ignore the collapse in confidence and unjust redistribution. Chile's good macroeconomic performance has done little to convince the population that things are going in the right direction. At the same time, we have the contrary case of Venezuela, where there is large popular support for the actions taken by the government of President Chávez, while the world views them in a negative light. There is little doubt that a high level of incongruence exists between what people think of their own development and how the world sees the evolution of a country.

In Chile there has been an undeniable growth in the size of the "cake," but each day opposition grows to the unequal way in which it is being shared around.<sup>35</sup>

Despite the media war, we have seen that, in reaction to the injustices caused by neoliberalism, people's consciousness has taken a qualitative leap forward. It has done this very rapidly and manifested itself at election time as support for governments that propose anti-neoliberal programs.

## *2. Correlation of Forces*

Evidently, Latin America's political landscape has been radically altered since Chávez was elected in 1998. A new correlation of forces has been established that makes it more difficult for the United States to achieve its objectives in the region. At the same time, the U.S. empire has attempted to stop this advance by stepping up its attacks on our countries.

The U.S. government no longer has the same freedom it once had to maneuver in our continent. Now it has to deal with rebel governments whose agenda often clashes with the White House's agenda. Valter Pomar, a member of the national directorate of the Brazilian Partido de los Trabajadores (Workers' Party, PT) and executive secretary of the Foro de São Paulo (Sao Paulo Forum), argues that between 1998 and 2013, a new correlation of forces capable of limiting foreign intervention in the region was established.<sup>36</sup>

Let us look at some of the facts that indicate this to be the case.

### **FACTS INDICATING THE ADVANCE OF PROGRESSIVE FORCES**

**The United States suffers its first important defeat: FTAA rejected, ALBA created.** The U.S. government has been unable to impose its FTAA. As an alternative to the FTAA, the Bolivarian

Alternative for the Peoples of Our Americas, better known as ALBA, was created on December 14, 2004, first as an agreement between Cuba and Venezuela.<sup>37</sup> Since then several Latin American countries have joined: Bolivia (2006), Nicaragua (2007), Honduras (2008), Dominica (2008), Antigua and Barbuda (2009), Saint Vincent and the Grenadines (2009), and Ecuador (2009). Honduras withdrew following the coup against Zelaya in 2009, while Uruguay, although not a full member of ALBA, signed up in March 2013 to use the ALBA currency, the sucre.

According to Ximena de la Barra, the FTAA's defeat "was consolidated at the OAS (Organization of American States) Summit in Mar del Plata at the end of 2005, where the United States carried out its last attempt to rescue this trade project aimed at imperial domination. For the first time ever, this country was challenged by an institution of its own creation. For their part, the social movements won at the summit the right to be protagonists in the regional political processes." From then on, "integration stopped being simply an issue for governments that were more or less subservient to foreign capital and the designs of the imperial metropolis, and became an issue for the people."<sup>38</sup> Faced with this situation, the White House has sought to sign bilateral treaties with Latin American countries such as Chile, Uruguay, Peru, Colombia, and with a group of Central American countries via the Dominican Republic–Central America Free Trade Agreement (CAFTA). Moreover, it is promoting the Alianza del Pacífico (Pacific Alliance) among its unconditional supporters as a way of counteracting the counter-hegemonic processes of integration underway.

**Ecuador closes the Manta U.S. military base.** On November 1, 2008, Ecuadorian president Rafael Correa announced he would not renew the contract that allowed the U.S. Southern Command to have a military base in the Ecuadorian city of Manta. The treaty, signed in 1999, was due to expire in 2009. This was a big blow for the Pentagon, as this base was the biggest U.S. center of operations in Latin America.

There were plenty of reasons to make this decision, but there is no doubt that the event that triggered it was the flagrant violation of Ecuador's sovereignty that occurred on March 1, 2008, when a Colombian army squadron crossed the border and launched an attack against a Fuerzas Armadas Revolucionarias de Colombia (Revolutionary Armed Forces of Colombia, FARC) camp in the Sucumbíos region. Twenty-five people were killed in the attack, including the FARC commander Raúl Reyes and several Mexican and Ecuadorian civilians.

Shortly before announcing the non-renewal of the contract, Quito released an official report about CIA infiltration in the Ecuadorian armed forces that indicated the Colombian attack on Ecuadorian territory relied on support from a U.S. plane stationed at the Manta base.

Two other examples of the Ecuadorian government taking an independent and sovereign stance preceded the closure of the base: the February 7 expulsion of Armando Astorga, a customs attaché at the U.S. embassy, following a government decision to no longer allow the U.S. embassy to have the final say when selecting the top brass of the police intelligence unit, including the commanding officer; and the expulsion ten days later of Max Sullivan, the first secretary of the U.S. embassy, over unacceptable interference in internal affairs.<sup>39</sup>

In response to the closure of the Manta base, the Pentagon transferred its ships, weapons, and high-tech spying devices to Colombian bases.

**Cuba joins the Rio Group.** Cuba's official entry into the Rio Group was announced on December 16, 2008, during the Latin America and Caribbean Summit held in Salvador Bahía, Brazil, with thirty-three heads of state in attendance. Cuba's presence in the region was thus strengthened.

**OAS reaches consensus on lifting sanctions against Cuba.** On June 3, 2009, the foreign ministers at an OAS meeting in Honduras

agreed to repeal the 1962 decision to expel Cuba from the organization. Ecuadorian foreign minister Fander Falconí said the decision “had been approved by all the representatives,” and added that this agreement “reflects the change of epoch that Latin America is experiencing.”<sup>40</sup> For its part, Cuba graciously declined the proposal to rejoin.

**Brazil buys French, rather than U.S., military equipment.** On September 7, 2009, Lula signed an agreement with Nicolas Sarkozy that enabled Brazil to obtain strategically important military equipment (five submarines and fifty military transport helicopters) totaling \$12 million in value. This was on top of the thirty-six fighter planes Brazil had previously purchased.

Uruguayan journalist Aram Aharonian wrote that this agreement appeared “to complete the strategic shift brought about by the decline of U.S. hegemony and the rise of Brazil as a world power,” adding that “an autonomous military-industrial complex had emerged in what was once the empire’s backyard.” The aim is to build a protective shield around the Amazon region and the oil and gas reserves (approximately 50 million barrels’ worth) that were discovered just off the Brazilian coastline in 2008. This measure was passed by the Brazilian parliament with the support of the opposition in a record time of less than 48 hours. Aharonian said this was not a measure taken by a government, but rather the decision of a state. The sector with most at stake in this agreement is the military sector, which was very worried about its technological weaknesses if Western powers decided to intervene. Foreign powers have been trying to impose “shared sovereignty” in the Amazon region since 1990. There is also additional information that Brazil is able to manufacture atomic weapons.<sup>41</sup>

**Paraguayan president refuses Southern Command’s presence in his country.** In another gesture of sovereignty, and in the context of growing rejection of U.S. military presence in the subcontinent, Paraguayan president Fernando Lugo decided, on September 17,

2009, to refuse U.S. troops entry to his country, even if they were accompanied by professionals engaged in humanitarian activities. The U.S. Southern Command's proposed program would have seen 500 U.S. civilian and military personnel stationed in Paraguay.

**Growing number of meetings without U.S. participation.** Latin American and Caribbean leaders have begun meeting without the United States. The first South American Summit took place in Brazil in 2000. Two years later there was another meeting in Ecuador, and in 2004 the summit was held in Peru. The following year, Brazil hosted the first summit of the South American Community of Nations. Then, in 2006, a second summit was held in Bolivia, during which the foundation stone was laid for what became the Union of South American Nations (UNASUR). It adopted this name at the energy summit held in Venezuela in 2007. The founding treaty for this organization was approved in Brazil the following year.

**Second Africa–South America Summit.** Latin American countries are not only coordinating more and more between themselves (and without the presence of U.S. representatives), they are also increasing coordination with Africa. The Second Africa–South America Summit was held on Margarita Island on September 26–27, 2009. Twenty-seven heads of states attended. The summit issued a call for a return to democracy and the restoration of the constitutional government in Honduras, and a proposal was made to draw up a 2010–2020 Strategic Plan as part of setting up a framework for collaboration between the two regions.

**Bank of the South gets off the ground.** On September 28, 2009, Chávez's 2006 proposal to set up the Banco del Sur (Bank of the South) linked to UNASUR came to fruition.

This historic event took place during the Second Africa–South America Summit. Seven South American leaders from Venezuela, Brazil, Ecuador, Paraguay, Bolivia, Argentina, and Uruguay signed

the Banco del Sur's founding statutes and launched it with seven billion dollars in start-up capital.

The original plan was to create a multilateral financial entity in South America that could act as an alternative to the IMF and other credit-granting institutions controlled by industrialized countries. The bank was set up with some specific projects in mind, but the idea has evolved over the course of several meetings that have been held to get it up and running. Peruvian economist Oscar Ugarteche, a supporter of the proposal, believes that insofar as it can capture international reserves from central banks and use them intelligently to promote development in the poorest regions and above all for ecologically and socially sustainable projects, the bank could be a first step toward a new kind of South American integration.<sup>42</sup>

Despite statements of good intentions, the process of setting up the Bank of the South has encountered a number of hurdles, including reticence on the part of Brazil, which has preferred to promote the regional role played by its own Banco de Desarrollo Económico y Social (Economic and Social Development Bank, BNDES). By the start of 2013, the Bank of the South was still not operational.

On the other hand, the ALBA Bank, which was initiated at the Sixth ALBA Summit held in January 2008, has proven to be much more agile. With an initial start-up fund of \$1 billion, it is based on the ALBA principles of complementarity, solidarity, cooperation, and respect for sovereignty. The idea is that member countries contribute according to their capacities and have equal representation in the democratic procedure for decision making within the bank, and that the bank contributes to accelerating the creation of decent jobs, decreasing excessive emigration, and reducing wealth concentration, inequality, poverty, and social exclusion, all the while promoting sustainable human development.<sup>43</sup>

The ALBA Bank also aims to develop internal financial markets, channel resources toward productive projects, revitalize fair trade, develop regional integration infrastructure, promote sovereign

control over the economy and finances, reduce vulnerability to external financial crises, keep resources within the region, and activate a virtuous cycle of cultural, social, economic, and political transformation in the region. This focus on compensating asymmetries is something that the Bank of the South has put a lot less emphasis on, due to resistance from some of its member countries.

**The sucre—an attempt to break the hold of the U.S. dollar.** With the unanimous support of leaders and representatives of countries that make up ALBA, the Sistema Único de Compensación Regional de Pagos (Unified System for Regional Compensation, SUCRE) was created in April 2009. It was initially established as a virtual currency that could act as an accounting mechanism for trade, with the idea that at some later stage it would become a regional hard currency.

A substantial quantitative increase in trade using the sucre has occurred: from 10 million sucres in 2010 to approximately 216 million in 2011, and around 850 million in 2012. The majority of trade in 2011 and 2012 was between Ecuador and Venezuela. There has also been a good deal of trade between the latter and Bolivia.

There has been progress, albeit slow, toward involving small-scale productive structures (cooperatives, communal companies) in order to diversify the variety of agents trading in the sucre.

**Creation of CELAC.** In December 2011, the Comunidad de Estados Latinoamericanos y Caribeños (Community of Latin American and Caribbean States, CELAC) was created in Caracas. Present at the meeting were all the presidents of the region, including Cuba's. Of the thirty-five countries in the continent, only the United States and Canada were excluded, converting CELAC into a direct challenge to the OAS.

The creation of CELAC constituted an event of great historic proportions, and it was the direct result of all the advances mentioned above. President Ortega from Nicaragua believes it

represented a death sentence for the Monroe Doctrine, the policy that said that America was for the Americans, that is, those from the United States. I would add that it signified the beginning of the end for the OAS and the Washington Consensus, which imposed neoliberalism in the region. The hope is that out of CELAC the Latin American and Caribbean Consensus will emerge; that is, our own agenda, one that is not subordinated to U.S. interests.<sup>44</sup>

It is also significant that the second term of the *pro tempore* presidency was designated to Cuba, a previously excluded nation whose re-integration has been consolidated through this new way of inserting a sovereign Latin America into the global chessboard.

**Significant growth in economic relations with China.** Given China's growing need for raw materials and the fact that Latin America has plenty of them, relations between the two regions have become closer. Today, China is one of the main trading partners for Peru, Chile, and Brazil. It has begun to form strategic alliances with several other countries in the region. According to Spanish expert in international relations Tito Drago, "Within a few years, [China] has become the third-largest trading partner with the region and the first when it comes to Brazil, Chile and Peru. These three countries have also led the way in terms of economic growth over the last few years, while big countries such as Mexico, that are still closely tied to the U.S., did not grow as much."<sup>45</sup>

Drago adds that the Economic Commission for Latin America and the Caribbean (ECLAC) foresees trade with China continuing to grow and that the country will become the second-largest destination for exports from the region by 2014 and the second most important source of imports by 2015, in both cases overtaking the European Union.

It is worth noting that trade agreements with China do not impose conditions like those enforced by the United States or the European Union.

Since the end of 2009, trade and economic relations between China and Venezuela have been tightening. Agreements have been

signed in agriculture, energy, and industry, and a deal has been struck to increase the amount of capital in the China-Venezuela Development Fund, doubling it to \$12 billion. This is the biggest loan given by China to any country since 1949.

Diego Sánchez Ancochea, an economics professor at Saint Anthony's College, Oxford, says that the fund has generated new resources and opportunities for Brazil, Argentina, Venezuela, and other Latin American countries. However, it also creates serious risks and threats, including a steep rise in the trade deficit with China, a reinforcement of "the traditional way Latin America, especially the Andean countries and those of the Southern Cone, participate in the world economy," and a heavy blow to labor intensive sectors such as textiles, with small and medium-size companies at risk of being edged out by competitors who benefit from China's high productivity and low real wages.<sup>46</sup>

After running through this long list of events, I believe we can say, without equivocation, that U.S. influence in the region has declined.

### THE U.S. EMPIRE'S POWER AND ITS PLAN FOR RECOLONIZATION AND "DISCIPLINING"

Although there has been a marked change in the correlation of forces to the benefit of left and progressive governments in the region, we should not exaggerate this. The U.S. loss of ideological and political influence, plus a reduction in its regional economic power, has been partially compensated by its increased influence on the media and growing military power.

Today there are twenty-three U.S. military bases across our subcontinent, and multilateral joint-military exercises are still held every year for the purpose of training troops in the region. The Fourth Fleet has been reactivated and U.S. intelligence networks have been extended in an effort to keep a watch over and control the dynamics of popular movements in the region. The

U.S. empire is trying to prevent the emergence of national forces capable of confronting U.S. policies of domination and vassalage.

There has been a huge increase in U.S. military aid to Colombia, its faithful ally and beachhead in the region.

To weaken any government it does not control, the United States has supported separatist movements such as in Bolivia (the eastern states of Santa Cruz, Beni, Pando, and Tarija), Ecuador (the city and province of Guayaquil), and Venezuela (the oil-rich state of Zulia).<sup>47</sup>

### *The Pentagon Kicks Off a New Strategy in 2008*

Faced with the unstoppable advance of left forces in Latin America, especially over the last two years, the Pentagon, according to Mexican researcher Ana Esther Ceceña, has begun implementing “a plan to recolonize and discipline the whole continent,” with the aim of trying to stop and, as much as possible, reverse the process of building a free and sovereign Latin America set in motion by President Chávez.<sup>48</sup>

The empire cannot accept the fact that, despite the enormous economic, political, military, and media power it has deployed in the region, Latin American countries are designing their own independent agenda that run counter to those of the empire.

**The U.S. attack on Ecuador.** The March 2008 attack on the Sucumbíos province in Ecuador was, according to Ana Esther Ceceña, the start of a “new phase in U.S. strategy to control its living space: the American continent.” It represented the first stages of a state policy that did not change with Obama taking office, although it has adapted itself to the new continental situation.

The military action—which had the support of the Pentagon but was denounced by the OAS as a violation of Ecuadorian sovereignty—triggered a breakdown in Bogotá-Quito diplomatic relations.

**Attempted civilian-prefectural coup in Bolivia.** In response to Morales's overwhelming victory in the July 2008 recall referendum, the oligarchic right entrenched in the eastern departments that make up the Media Luna (Half Moon) attempted to mount what the Bolivian government denounced as a civilian-prefectural coup. Using their control over the prefectures of Santa Cruz, Beni, Pando, and Tarija, and with support from the elite-dominated civic committees in the region, they violently took over state institutions. Paramilitaries soon appeared on the street as part of a plan to create a situation of ungovernability and force the government to resign or bring the military out onto the streets, thereby contributing to further deaths and chaos and potentially providing a pretext for foreign military intervention.

As there was plenty of evidence that the plot had been prepared with the direct support of the U.S. embassy in La Paz, the Bolivian government decided to expel the U.S. ambassador on September 9. Chávez also decided to expel the U.S. ambassador to Venezuela that same day. Bolivian social movements responded by setting off on a march to Santa Cruz to confront the coup plotters.

This was followed by the massacre in Pando, where dozens of peasants were murdered. This event was so strongly condemned throughout Bolivia that the government, together with the social movements, decided to declare a state of emergency in Pando and sent the armed forces to restore order. The plot was finally defeated thanks to Santa Cruz being encircled by the social movements and the unequivocal statements issued by UNASUR that member countries would only recognize the legitimate government of Morales. For the right, this represented a new political-military defeat to add to its political defeat in the June referendum.

**Institutional coup against Zelaya in Honduras.** Fifteen months after the attack on Ecuador and six months into the Obama presidency, the Honduran president, Manuel Zelaya, was kidnapped and thrown out of the country in the early hours of June 28, 2009. Zelaya was a liberal political leader who, during his time in office,

had become radicalized, joined ALBA, and proposed a constituent assembly. The National Assembly ordered the military operation that ousted him.

This institutional coup was almost unanimously denounced. Brazilian researcher Theotonio dos Santos reported that this was the first time the United States condemned a coup d'état in Latin America.<sup>49</sup> But what did this condemnation entail? Did it signify a change in U.S. imperial policy toward our subcontinent? Unfortunately, the answer is no. Nothing has fundamentally changed.

In spite of Obama's formal condemnation, there is clear evidence of the Pentagon's hand in the preparations for this coup. This comes as no surprise, as throughout the 1980s Honduras was the U.S. regional operations center for its fight against Nicaragua's Sandinista government and the Salvadoran guerrillas. Moreover, the Soto Cano military base was of strategic importance for military and intelligence operations in the region.

According to Costa Rican analyst Álvaro Montero, the Honduran army was used by Reagan and Bush to support the Contra military bases in Honduras and in the north of Nicaragua. The army collaborated with the CIA to transport and sell drugs as part of financing the dirty war against the Sandinistas. It was said that if a sheet of paper rustled in the barracks of the Honduran army, U.S. intelligence officers would hear it.<sup>50</sup>

The big question is how committed President Obama was to this coup. Opinions are divided on this matter. There are those who wonder if this was also a coup against Obama.<sup>51</sup> Others believe that it was a move aimed at reinforcing the militarist position of Hilary Clinton within the overall context of government policy toward the region. Venezuelan journalist and former deputy president José Vicente Rangel observed that two levels of U.S. government policy operated in Honduras; one was the White House's and the other was that of the machinery left in place by the Bush administration, operating from the U.S. military base in Palmerola.<sup>52</sup>

Clearly, the U.S. empire placed vital importance on stopping the advances being made toward integration, in particular the ALBA project initiated by Chávez, which had been gaining more and more supporters. So the Pentagon decided to attack the integration process at the weakest link, Honduras, by promoting a military coup with a “legal” face that was more in tune with the new era.

Ana Esther Ceceña writes that this was “the first operation carried out as part of re-launching an escalation” of the process of recolonization, which was then followed by the decision to install new military bases in Colombia with the concomitant immunity given to U.S. troops on Colombian soil.<sup>53</sup>

Space does not allow for a deeper analysis of events in Honduras. However, I want to state that in the short term, the big winner out of all this has been the Pentagon. At the same time, the abrupt interruption of Honduras’s popular democratic process has sown the seeds for a resistance movement that sooner or later will see the Honduran people reconquer democracy and take steps toward building a fairer and more solidarity-based society. Honduras today is not the same as it was yesterday. Never before in its history have the popular sectors been so united. The struggle to hold a constituent assembly, instead of tapering off, is stronger than ever. One day the Honduran people will give thanks for this momentary setback.

**New military bases in Colombia.** The U.S. response to the closure of its Manta base was to transfer ships, arms, and high-tech spying equipment to Colombian bases as per the agreements signed in early March 2009 between the Colombian Ministry of Defense, the head of the Pentagon, and the CIA. This expanded U.S. military presence sought to turn Colombia into a virtual land-based U.S. aircraft carrier located in the heart of the region.<sup>54</sup>

It is no coincidence that the bases that will receive most of this military equipment are located very close to Colombia’s borders with Ecuador and Venezuela.

Colombia's decision to allow U.S. soldiers and civilian personnel to be stationed in five bases within its territory created a domestic uproar that extended to the country's neighbors, especially Venezuela and Ecuador, and unleashed widespread criticism at the international level.

Negotiations surrounding the agreement were secretly held in the United States. The agreement was signed on October 30, 2009, by Colombian foreign minister Jaime Bermudez and U.S. ambassador to Colombia William Brownfield. The agreement is known as the "Complementary Agreement for Defense and Security Cooperation and Technical Assistance." According to a State Department internal document dated August 18, 2009, the Defense Cooperation Agreement is designed to facilitate bilateral cooperation in matters concerning Colombian security.

Instead of creating new military bases, the agreement grants U.S. personnel access to seven Colombian military installations: two naval bases, two military installations, and three air force bases located in Palanquero, Apia, and Malambo.

Colombia, South America's black sheep, is an occupied country. Like Mexico, it suffers from a "comprehensive occupation," to use Pablo González Casanova's term, involving the "occupation of social, economic, administrative, cultural, media, territorial and strategic spheres." Pentagon strategists call this phenomenon "full spectrum dominance."

**Attempted coup against Rafael Correa.** On September 30, 2010, a National Police strike was called in Ecuador in opposition to the Public Service Law approved the day before that sought to introduce labor reforms in the public service deemed to be detrimental to police officers.

Elements within the ranks of the National Police began a protest inside their barracks, went on strike, blockaded roadways, and impeded entry into parliament. Elements within the Ecuadorian Air Force also joined in, using their bodies to blockade the runway at the Mariscal Sucre International Airport.

Correa has said the police rebellion was an “attempted coup” orchestrated by the opposition and certain groups embedded in the armed forces and police with links to Sociedad Patriótica (Patriotic Society, PSP). While the president was detained in the Police Hospital in Quito, most of the countries across the world came out to condemn the attempted coup.

There are no indications that the United States was behind this coup, but it is well known that Lucio Gutiérrez maintains a close relationship with the U.S. government.

**Institutional coup brings down Lugo in Paraguay.** With thirty-nine votes in favor and only four against, the Paraguayan Senate voted in June 2012 to impeach Fernando Lugo for poor performance of his duties. He was accused of being responsible for the massacre carried out by Paraguayan security forces when attempting to evict some 100 campesinos occupying lands belonging to a member of the Partido Colorado (Colorado Party) during the Stroessner dictatorship. Eleven campesinos and six police officers were killed, and dozens more injured and detained. Vice President Federico Franco was sworn in as Lugo’s successor.

As was to be expected, the United States accepted Lugo’s sacking, while UNASUR and MERCOSUR condemned it.

A U.S. embassy cable made public by WikiLeaks revealed that the U.S. State Department knew the opposition was planning a coup in Paraguay. A confidential diplomatic cable dated March 28, 2009, and sent from the U.S. embassy in Asuncion to the State Department, noted: “Rumors persist that discredited General and UNACE party leader Lino Oviedo and ex-president Nicanor Duarte Frutos are now working together to assume power via (mostly) legal means should President Lugo stumble in coming months.”<sup>55</sup> The cable points out the plan included Federico Franco taking over as president. According to the cable, the Paraguayan opposition was waiting for any kind of mistake by the ex-bishop in order to carry out a political trial against him.

*Obama Government: More of the Same*

The coup in Honduras and subsequent developments in that country, the increased number of military bases in Colombia, the continuing economic blockade of Cuba, keeping the base in Guantanamo open, and the other aforementioned events have been a particular disappointment for those who, like me, hoped for greater consistency between Obama's discourse and his actions. There is no longer even the slightest doubt that the aims pursued by the imperial apparatus remain the same, with the added factor that the Pentagon has begun to pay more attention to Latin America. Previously, its gaze was fixed on wars in Iraq and Afghanistan.

### *3. Typology of Latin American Governments*

Previously I discussed how during the past ten years, progressive and left sectors have been winning governments in more and more countries across the region. Various analysts have made an effort to classify governments by drawing up different typologies. We can initially distinguish two large blocs: right or conservative governments that seek to give neoliberalism a makeover and governments that define themselves as “on the left” or “center left” and are looking for alternatives to the existing state of affairs.

#### **GOVERNMENTS THAT WANT TO GIVE NEOLIBERALISM A MAKEOVER**

Some Latin American countries want to give neoliberalism a makeover by implementing a series of reforms that “make it possible to further deepen the transnationalization and denationalization of their economies, by increasing incentives for big capital and continuing to regressively redistribute income.”<sup>56</sup> These governments implement what Roberto Regalado has called “neoliberal reforms.”<sup>57</sup>

The governments of Colombia, Mexico, Chile, and most Central American countries fall into this first group.

**GOVERNMENTS LOOKING FOR SOLUTIONS THAT OFFER AN ALTERNATIVE TO NEOLIBERALISM**

Left or center-left governments in the region include those who were elected on platforms offering an alternative to neoliberalism. These governments, even though very different from each other, have at least four identical planks in their platforms: the struggles for social equality, for political democratization, for national sovereignty, and for regional integration. They can be further classified into two subgroups:

**Governments that, without breaking with neoliberal policies, emphasize social issues.** These governments seek to balance liberalism with progressive social policies such as subsidies, rather than structural changes. This includes the governments of Brazil, Uruguay, and Argentina. Former Mexican Foreign Minister Jorge Castañeda refers to them as the “good left.” Aram Aharonian characterizes them as governments “with post-neoliberal, developmentalist policies, which without breaking with neoliberal economic policies place a fresh emphasis both on the social sphere and on policies that promote productive domestic capitalism.” Roberto Regalado says these governments implement reforms that “try to alleviate the economic, political and social contradictions of today’s capitalism without breaking with the systems.”<sup>58</sup>

**Governments that want to break with neoliberal policies using the support of popular mobilization.** Some analysts have classified these governments as anti-imperialist, because they have adopted social and economic protectionist measures against the United States. They include the governments of Bolivia, Ecuador, Nicaragua, and Venezuela, governments that Jorge Castañeda calls the “bad left” and which Aram Aharonian describes as “governments based on social and popular mobilization that have an expressed desire for change, are in favor of a break with neoliberal policies and have a new understanding of the economy, of regional

integration and of integration of the peoples.”<sup>59</sup> According to Roberto Regalado, these governments implement “reforms whose strategic direction and intent are anti-capitalist” and therefore are reforms that might lead to revolution.<sup>60</sup>

U.S. intellectual James Petras, renowned for his radical views, considers these governments to represent a pragmatic left, in contrast to those he labels “the radical left,” which includes the FARC.<sup>61</sup>

#### 4. *“Left” Governments Facing More Objective Limitations*

Henceforth I shall speak of “left” (in quotation marks) governments to refer to the group of governments that won elections by raising anti-neoliberal banners, and leave it to the reader to classify them according to the criteria listed below.

However, before continuing I shall specify what I mean by left. In the 1960s, there was a tendency to define the left not so much by the goal it was pursuing but by the means it used to reach that goal. The implicit goal was socialism, the means were either armed struggle or institutional struggle, and the left was branded revolutionary or reformist according to which method it pursued.

In the 1990s, the term “New Left” was sometimes used to refer to those on the left that abandoned the armed struggle and joined the institutional struggle. At other times, this term was applied to the “social left,” composed of a large number of diverse actors, such as indigenous peoples, women, environmentalists, and human rights defenders.<sup>62</sup>

I would like to suggest a stricter definition that is derived from the goal pursued. Such a definition requires us to ask ourselves if the objective is to give capitalism a makeover, so that it is more humane, or if the goal is to build a society that can replace capitalism.

Therefore, I use the label “left” to refer to the set of forces that struggle to build an alternative to the exploitative and oppressive capitalist system and its logic of profit. That is, a society of workers organized around a humanist and solidarity-based logic, with the aim of satisfying human needs. A society free from the material and spiritual poverty that capitalism engenders. A society that does not issue decrees from above but rather builds from below, with the people as protagonists. In other words, a socialist society.

These forces are therefore not motivated solely by a struggle for equality that manifests itself as a war on poverty—although this may be one of their most distinctive features—but also by the rejection of an aberrant societal model based on exploitation and the logic of profit: the capitalist model.

I should add, nevertheless, that I fully agree with the Uruguayan researcher Beatriz Stolowicz, who maintains, “One is not left just because one says one is; rather one is left because of what one does to achieve these necessary transformations and constructions. That is how one comes to be left.”<sup>63</sup>

But why is it so necessary to use the criterion of practice to decide who is on the left? Because—as I wrote in 1999 in *The Left on the Threshold of the Twenty-First Century: Making the Impossible Possible*—the right has unscrupulously appropriated the left’s language, which is particularly obvious in the way it formulates its programs.<sup>64</sup> Words like “reforms,” “structural changes,” “concern over poverty,” and “transition” are today part of an anti-people, oppressive language. As Franz Hinkelammert says: “The key words of the oppositional popular movements of the 1950s and 1960s have been transformed into the key words of those who ruthlessly destroyed them.”<sup>65</sup> He goes on to say a little later: “The night, when all cats are gray, falls. Everyone is against privilege; all want reforms and a structural change. Everyone is in favor of a preferential option for the poor.”<sup>66</sup>

Today—in the midst of the crisis of neoliberalism—this appropriation of the left’s language has reached the point where even capitalists have adopted the left’s criticism of neoliberalism. The

role of the market has begun to be challenged; there is talk of the need for the regulatory power of the state.

We have to acknowledge, as Beatriz Stolowicz says, that “in the sphere of discourse, capitalist strategies are not dogmatic, they change their arguments, they criticize what they previously proposed when the negative effects can no longer be hidden and are generating political problems.” To win people over, “they show solidarity with *the discontent over globalization* (Stiglitz dixit) and join in the anti-globalization zeal.” Thus, for them, “neoliberalism” is simply speculation, and financial capital is to blame for the irresponsibility of “bad executives,” thus protecting the credibility of capital. Some have raised the suggestion that neoliberalism must be overcome by counteracting financial speculation with more productive investment. Capitalism thus presents itself as neo-developmentalism and against both *laissez-faire* and populism.<sup>67</sup>

### *Electoral Victories, but Less Room to Move*

Returning to the subject of our governments, it is important to briefly examine the situation that existed when the government was elected, that is to say, the reality it had to deal with, so we can evaluate their performance as objectively as possible. When analyzing the correlation of forces in the subcontinent, I mentioned the efforts made by the Pentagon to retain military control over the region and reverse the process of integration taking place. Three other elements are important for a better understanding of the context in which these governments have had to operate:

#### **1. Key decisions made outside of government and parliament.**

It is obvious that the new heads of government have had less room to maneuver in recent decades than in earlier periods, because today the important decisions are not made by parliaments or executive branches.

Although the eligible voter population has increased enormously in recent decades and electoral fraud has become more

and more difficult, making it possible for left candidates to be elected, this has, paradoxically, not led to an expansion of the democratic system. This is because most important decisions are not made by parliaments, nor by elected presidents, but by bodies they cannot control: large international financial institutions, (IMF, World Bank), autonomous central banks, big transnational corporations, national security bodies, etc.<sup>68</sup>

2. **Opposition-controlled media.** Then there is the role played by the media, which is concentrated in the hands of large economic groups.<sup>69</sup>

Noam Chomsky said the media are instruments for “manufacturing consent” and make it possible to “shepherd the bewildered herd.” According to Chomsky, propaganda is as necessary to bourgeois democracy as repression was to the totalitarian state.<sup>70</sup> As such, bourgeois political parties can accept a defeat at the polls as long as they continue to control most of the mass media. It is the media that, from the moment of defeat, and even before, carries out the role of winning back the hearts and minds of those who made the “mistake” of electing a leftist head of state.

This is the reason for the visceral reactions we have seen in a number of our countries to measures taken by left governments to punish media disinformation campaigns or campaigns to incite violence, or to create legal instruments that protect the people’s right to receive accurate information. The powerful international media echo these reactions. They know that today’s political battles are not won with atomic bombs but with “media bombs.”

An example of these “media bombs” is the campaign carried out to make people think Venezuela is engaged in an arms race that threatens the region. The media supports its argument by alluding to Venezuela’s weapons purchase from Russia. However, if CIA data are consulted, it is clear the situation is the complete opposite. Using this data, Belgian economist Eric Toussaint reports in October 2009 that “Venezuelan military

spending is the sixth highest in the region behind that of Brazil, Argentina, Chile (a country with a much smaller population than Venezuela and considered to be a 'model country'), Colombia, and Mexico. In relative terms, comparing military spending to GDP, the Venezuelan military budget is the ninth largest in Latin America." Have people been able to read this in the most important international papers? Not at all. Instead, the media reported in August 2009 that Sweden was asking Venezuela to respond to Colombian allegations that it was supplying arms to the FARC guerrillas. Sweden had in effect told Colombia that the SAAB missiles found in a FARC camp had been supplied by Sweden to Venezuela. However, was anyone able to find an article reporting the detailed and concise reply given by Hugo Chávez stating that the missiles in question had been stolen from a Venezuelan port in 1995, four years before he took over the presidency?<sup>71</sup> Who had the chance to read his reply?

- 3. Inherited baggage.** These governments have also inherited a lot of cultural baggage: an individualist culture based on the idea of survival of the fittest; a paternalist culture that prefers to wait for the state to solve our problems instead of organizing and fighting to resolve them ourselves; a consumerist culture based on the belief that the more we have, the better we are, rather than feeling bad for owning unnecessary stuff when there are people around us who lack enough for a dignified life.

In sum, it seems today that the election of left candidates is better tolerated by conservative forces, so long as they remain within the established institutional framework, because ultimately they have fewer real possibilities of changing the existing situation.

### BEING AWARE OF THE CORRELATION OF FORCES

Given everything I have said up until now, we must be careful when the time comes to judge "left" governments in the region. If

we are to judge them by what they do, we must be very clear about what they cannot do, not because of lack of will but rather because of objective limitations. We have to begin with a correct analysis of the inherited economic structure, of the cultural baggage they inherit and within which they must operate, and of the correlation of forces, national and international, they face. These are things that more radical left sectors, which demand that their governments take more drastic measures, often fail to take into account. They point to Venezuela as an example of a government that should take more drastic measures because of its great economic potential due to natural resources, particularly oil, something that probably no revolutionary process has had in its favor before.

I share Valter Pomar's opinion when he states that the existing situation may oblige a revolutionary government to adopt capitalist measures, but that these measures take on a different strategic meaning depending on whether a capitalist or socialist government adopts them.<sup>72</sup> I would add that these capitalist measures must also create conditions for advancing afterward toward socialist relations of production.

Therefore, by looking first at the existing situation in each country and analyzing the correlation of forces, we can better understand what these governments can and cannot do.

### *Correlation of Forces: Chávez and Lula*

Let us consider for a moment Lula's government in Brazil. Although he won the presidential elections in 2002 with a bigger vote than Chávez obtained in 1998, we should not forget that this result came about because of a policy of broad alliances that were necessary for winning at the polls, and even more so for governing the country. We have to remember that the PT is not "the hegemonic force within Brazilian society," having only a minority in both houses of the legislature and, although it controlled, and still controls, a significant number of capital cities and important state governorships, it is in the minority at the provincial, municipal,

and national level. To all this must be added the fact that Brazil depends to a much greater degree on international finance capital than Venezuela does, with its huge oil revenues. Moreover, Lula doesn't have the same level of support within the armed forces as did Chávez. The latter defined his revolutionary process as peaceful but armed. As Pomar said in a recent interview, we are dealing with "a country marked by the effects of neoliberalism, [and] hegemonized by big capital and center-right forces, but this does not mean we cannot or should not criticize [the Lula government], particularly in regard to the way it has sought to overcome the legacy of neoliberalism and the hegemony of the center-right and big capital."<sup>73</sup>

Taking as our starting point the objective conditions in Brazil, I agree with Pomar when he says that the correlation of forces, institutional mechanisms, or economic situations that could allow the Brazilian government to operate similarly to the Venezuelan government do not exist.<sup>74</sup> He does, however, acknowledge that Lula's government could have done more than it has done to date.

### **IT'S NOT THE PACE, IT'S THE DIRECTION THAT MATTERS**

If we keep in mind all the factors mentioned above, rather than classifying Latin American governments according to some kind of typology as many analysts have done, we should try to evaluate their performance, always keeping in mind the correlation of forces within which they operate. We should pay less attention to the pace with which they are advancing, and more attention to the direction in which they are going, since the pace will, to large extent, depend on how these governments deal with obstacles in their path.<sup>75</sup>

PART 2

---

Where Are We Going?  
Twenty-First Century Socialism

## 5. *Why Talk about Socialism?*

You might be asking: why refer to *socialism* if this word has such negative connotations? Following socialism's collapse in the Soviet Union and Eastern Europe, leftist intellectuals the world over fell into a state of confusion. We seemed to know more about what we did not want socialism to be rather than what we wanted it to be. We rejected any lack of democracy, totalitarianism, state capitalist methods, and bureaucratic central planning. We opposed collectivism that sought to standardize without respect for differences, and productivism that emphasized the expansion of productive forces without taking into consideration the need to preserve nature. We also wanted nothing to do with dogmatism, intolerance toward legitimate opposition, attempts to impose atheism by persecuting believers, and the belief that a sole party was needed to lead the process of transition.

Today, the situation in Latin America has changed. We have a rough idea of what we want. Yet, why is the region clearer today on what kind of future society we want to construct? I believe this is largely due to:

1. The practical experience of what we have referred to as "local governments of popular participation." Profoundly democratic governments have opened up spaces for people's empowerment

- and, thanks to their transparency, contribute to the fight against corruption.
2. The rediscovery of communitarian indigenous practices, from which we have much to learn.
  3. The lessons we can learn from those Latin American governments that have proposed moving toward an anti-capitalist society, even if each government has given this society a different name.

These beacons that radiate throughout our continent were strengthened by the resounding failure of neoliberalism, increased resistance and struggle by social movements, and, more recently, by the global crisis of capitalism. An alternative to capitalism is more necessary than ever. What should we call it?

President Chávez was the first to have the courage to call this alternative society socialism. He called it “21st century socialism,” reclaiming the values associated with the word *socialism*: “love, solidarity, equality between men and women and equity among all,” but adding the adjective “21st century” to differentiate this new socialism from the errors and deviations of the socialist model that was implemented during the twentieth century in the Soviet Union and Eastern European countries.<sup>1</sup>

We should recall that the world’s first experiment with a socialism that differed from the Soviet model began in Chile, with the triumph of President Salvador Allende and the leftist Unidad Popular (Popular Unity, UP) coalition in 1970. Allende and the UP proposed a peaceful transition via the institutional road but were defeated by a military coup three years later. If our generation learned anything from this defeat, it was that to travel peacefully toward our goal required rethinking the socialist project that had been implemented until then in the world, and that it was necessary to develop a new project suited to the Chilean reality and find a peaceful way to build it. That’s what Allende seemed to sense when he coined his folkloric metaphor of “socialism with red wine and empanadas,” alluding to the

idea of building a democratic socialist society rooted in popular national traditions.<sup>2</sup>

### CHÁVEZ COINS THE PHRASE “21ST CENTURY SOCIALISM”

On December 5, 2004, at the closing ceremony of the World Meeting of Intellectuals and Artists in Defense of Humanity held in Caracas, Chávez surprised the audience by declaring for the first time, “It is necessary to review the history of socialism and rescue the concept of socialism.”<sup>3</sup>

Why was this a surprise? Because when he began his term in office, he thought he could carry out social transformations while leaving capitalism untouched, via a “Third Way.” But he soon realized this was not possible. The Venezuelan oligarchy was unwilling to give ground on anything. They only had to sense that the package of laws decreed at the end of 2001 might affect their interests a little bit to decide to organize a coup to overthrow Chávez. Once this plan failed, they tried to paralyze the country’s economy by sabotaging the oil industry. This experience, and two other factors, convinced the president that he had to find another way. Two other factors—coming to an understanding that the heartrending problems of the Venezuelan people could not be solved quickly enough using the bourgeois state apparatus he had inherited, and an awareness that within the framework of the capitalist model it is impossible to solve the tragedy of poverty and inequality—convinced him he had to move toward a different kind of society, toward what he subsequently called “21st century socialism.”<sup>4</sup>

A few weeks later, when he spoke at the World Social Forum on January 30, 2005, in Porto Alegre, Brazil, he reiterated the need to overcome capitalism and build socialism, but warned, “We have to reinvent socialism. It can’t be the kind of socialism we saw in the Soviet Union.” It is not a case of “resorting to state capitalism,” because if we do that, we will fall “into the same distortion as the Soviet Union did.”

Then, at the Fourth Social Debt Summit on February 25 that same year, he said there was no other alternative to capitalism besides socialism. However, he warned it would have to be different from previous socialisms, that we would have to “invent 21st century socialism.” This was the first time the phrase “21st century socialism” was used in public.

We can say, without a doubt, that Chávez was the person who coined the phrase. I say he “coined” it in the sense that he was responsible for popularizing the name, because some authors had already used it; for example, the Chilean sociologist Tomás Moulian in his book *21st Century Socialism: The Fifth Way*, which was published in 2000.<sup>5</sup>

Conscious of the negative baggage that came with the term, the Bolivarian leader decided to explain to his people, via numerous public interventions, all the benefits that this new society would bring for them, contrasting this with the situation created by capitalism. His pedagogical efforts were so successful that, according to polls, more than half of the Venezuelan population currently prefers socialism to capitalism.

### **A SOCIALISM THAT IS NEITHER AN IMITATION NOR COPY, BUT ROOTED IN OUR HISTORY**

However, it's not a matter of copying foreign models or exporting our own; it is necessary to build a model of socialism tailored to each country. Naturally, all models will share some common features that give it a socialist character.

The three basic features Chávez pointed to were: economic transformation, participative and protagonistic democracy in the political sphere, and socialist ethics “based on love, solidarity and equality between women and men, everybody.”<sup>6</sup>

These socialist ideas and values are very old. According to President Chávez, they can be found in biblical texts, in the Gospel, and in the practices of our indigenous peoples.<sup>7</sup>

Chávez believed, as Mariátegui did, that 21st century socialism could not be a carbon copy of other models; it had to be a “heroic creation.” That is why he talked of a “Bolivarian, Christian, Robinsonian, Indoamerican socialism . . . a new collective existence, equality, liberty and real, complete democracy.”<sup>8</sup>

Other leaders refer to communitarian socialism, a society based on the logic of *buen vivir*, a society of complete life. I agree with Bolivia’s Vice President Álvaro García Linera, who says the name is not what matters, what matters is the content.

Chávez concurred with Mariátegui that one of the principle roots of our project can be found in the socialism of our indigenous peoples. He therefore suggested that those indigenous practices imbued with a socialist spirit must be rescued and empowered.

Moreover, when people in Bolivia speak of “communitarian socialism,” they are proposing that we rescue what García Linera has called “communal civilization, with its technological procedures based on the power of the masses, on managing family and communal land and on the way economic and political activity meld, a civilization which has its own authorities and political institutions which give more importance to normative action than to electing, and in which individuality is a product of the collectivity and its past history.”<sup>9</sup>

All this should lead us to renounce any Western paternalist culture that believes indigenous communities need our help. Chávez maintained we should instead “ask them for help . . . so that they cooperate with us in building the socialist project of the 21st century.”<sup>10</sup>

## 6. *Recovering the Original Socialist Thinking*

This socialism of the 21st century, which seeks to guard its distance from the practices of twentieth-century socialism, has recovered some of Marx and Engels' original ideas. These ideas were not only distorted by the actions of the Soviet regime and the Marxist literature disseminated by that country, but were also downplayed or ignored by those who rejected socialism given what was done in its name.

Let us proceed to outlining some of these principle ideas.

**Integral human development.** According to Marx and Engels, future society will facilitate the integral development of all the potentialities of human beings, something that can only be achieved in a “cooperative society.”<sup>11</sup> In place of the fragmented human beings that capitalism produces, there will be integrally developed human beings. This development will be achieved through revolutionary practice (in transforming circumstances, the person transforms themselves), which is why Marx also affirmed that it is through revolutionary struggle that workers begin to throw off the muck of ages and start a process of self-transformation.

Friedrich Engels wrote in his “Draft of a Communist Confession of Faith,” an early draft of what would become *The Communist Manifesto*, that the goal was “to organize society in such a way

that every member of it can develop and use all his capabilities and powers in complete freedom and without thereby infringing the basic conditions of this society.” In Marx’s final version of the *Manifesto*, this new society was presented as an “association in which the free development of each is the condition for the free development of all.”

Canadian Marxist Michael Lebowitz has amply elaborated this idea in a number of his books dedicated to the issue of 21st century socialism.<sup>12</sup> He has been the most consistent in emphasizing integral human development as the goal, and the relationship between human development and revolutionary practice.

**Human beings as social beings.** Another of Marx’s often-ignored ideas has to do with the social character of human nature. Yet this is something he first talked about in the *Third Economic and Philosophical Manuscripts of 1844*. According to Marx, the communist society will allow individuals, who are social beings, to fully realize their social character.<sup>13</sup> When he put forward the proposition that human beings were social beings, he was not proposing the negation of the individual, he was saying that individual human nature is eminently social. There is a complementary, dialectical relationship between the individual being and the social being that makes it impossible to establish a separation between the individual character and social surroundings of a human being.

As the French philosopher Henri Lefebvre noted, there is no such thing as an abstract citizen, who is above everything, who is neither rich nor poor, neither young nor old, neither male nor female, or all of those things at once. Yugoslav writer Miodrag Zecevic said, “What exist are concrete persons who live among and depend on other people, who associate with and organize in various ways with other people in communities and organizations in which and through which they make real their interests, rights and duties.”<sup>14</sup>

This implies the rejection of “collectivism,” which suppresses differences between each member of society in the name of a group.

Collectivism is a flagrant distortion of Marxism. Remember, Marx criticized bourgeois law for trying to make people artificially equal instead of acknowledging their differences. By pretending to be the same for everyone, bourgeois law ends up being an unequal right. He said that any truly fair distribution had to take into account people's differentiated needs. Hence his maxim: "From each according to his ability, to each according to his needs."<sup>15</sup>

From where did Marx get these "scarce" ideas regarding what the alternative society to capitalism (which he calls communism) should look like? I say *scarce* because there are not many references in Marx's works to socialism. The German thinker dedicated himself to scientifically studying the capitalist mode of production, and even here he was unable to fully develop his ideas on the various areas he proposed to study. Moreover, even if he had the time to dedicate himself to studying what an alternative society might look like, he would not have been able to advance much in this direction given that scientific knowledge cannot precede reality.

Marx's ideas about the nature of future society did not fall from the sky, nor are they the result of speculative thought; rather, they arose from an analysis of the internal contradictions of capitalism itself. Marx argues that capitalism creates the material conditions of this new society. One of these is the technical need for the existence of the collective worker; another is an increase in the productive capacity required to respond to people's most pressing needs.

But Marx not only indicated the conditions that favored the emergence of an alternative society. He also studied the contradictions and negative effects of capitalism on workers and the environment, to indicate what must be negated (reversed or transformed into their opposite) if we are to move forward with the task of building socialism.<sup>16</sup>

Thanks to these inversions, Marx could envision the new society that would replace capitalism.

**Social property.** It is necessary to end capitalist private ownership of the means of production, which has come into conflict with

the increasingly social nature of production. This socialization of production reveals the need for property to become collective or common property in order to overcome the economic anarchy of capitalist production. Similarly, the economy should not be orientated toward self-interest but toward the interests of society as a whole.

**Eliminate the division between manual and intellectual labor.**

It is necessary to end the growing division between manual and intellectual labor—the result of capitalist dispossession of workers’ knowledge and skill—and transform labor into a comprehensive, simultaneously manual, and intellectual activity. In order to achieve workers’ maximum productive potential, it is necessary to end the alienated and mandatory character of labor that fragments and transforms workers into one more cog in a machine. These inversions establish the centrality of workers as protagonists in the production process.

**Govern nature in a rational way.** Marx also stated it was essential to end capitalist relationships of production and the antagonism between city and countryside, because they were responsible for an “irreparable rift” in the interdependent process of social metabolism between human beings and nature.<sup>17</sup> He noted that only in a communist society would “the associated producers, govern the human metabolism with nature in a rational way, bringing it under their collective control. . . .”<sup>18</sup>

I want to briefly expand on this topic, given the misrepresentations that have arisen based on a superficial reading of Marx’s and Engels’s texts, generally taken out of context, whereby these authors had a positive appreciation for capitalism’s ability to develop productive forces and the perspective of promoting an even greater development of these forces within the socialist society. I say “taken out of context” because when they speak of the necessity of pursuing industrial development on a grand scale within the new society, they are not proposing unlimited

development but a level of development sufficient to produce “enough goods to arrange distribution in such a way that the needs of all its members will be satisfied.”<sup>19</sup>

We must remember that Marx lived in a time of crisis of land fertility provoked by capitalism’s “blind desire for profits,” a crisis that provoked a desperate search for natural fertilizers such as guano and then saltpeter, and that underpinned the second agricultural revolution associated with the notable advances made in the science of soil. Early on, Marx believed these innovations would contribute to solving the crisis, but he quickly reached the conclusion that the second agricultural revolution would only worsen the problems.<sup>20</sup>

In that context, more than 150 years ago, the author of *Capital* developed, according to Marxist ecologist John Bellamy Foster, “a critique of the environmental degradation that anticipated much of the present day ecological thought.”<sup>21</sup>

In his masterpiece, Marx wrote: “. . . Moreover, all progress in capitalist agriculture is a progress in the art, not only of robbing the worker, but of robbing the soil; all progress in increasing the fertility of the soil for a given time is a progress toward ruining the more long-lasting sources of that fertility. The more country proceeds from large-scale industry as the background of its development, as in the case of the United States, the more rapid is this process of destruction. Capitalist production, therefore, only develops the techniques and the degree of combination of the social process of production by simultaneously undermining the original sources of all wealth—the soil and the worker.”<sup>22</sup>

From all this, we can conclude that only an alternative society to capitalism will be able to reestablish the natural metabolism between humans and nature. This alternative is a socialist society in which people and not a privileged elite decide—through their delegates—what and how to produce to satisfy the population’s true needs, and not artificial ones created by capitalism in its crazy pursuit of greater and greater profits.

**Society, not the state, must take the reins of economic development.** For Marx and Engels, socialism did not entail the simple handing over of the strategic means of production to the state, as this represents little more than a juridical change. The subordination of workers to an external force continues: there may be new socialist managers, but the alienated status of the workers in the production process remains unchanged. Though formally collective property, since the state represents society, real appropriation is still not collective.

Engels argued, “State-ownership of the productive forces is not the solution to the conflict” between the increasingly social character of production and private ownership over the means of production, although he added, “Concealed within it are the technical conditions that form the elements of that solution.” What is the solution? Engels maintained “this solution can only consist in the practical recognition of the social nature of the modern forces of production, and therefore in the harmonizing of the mode of production, appropriation and exchange with the socialized character of the means of production. And this can only come about by society openly and directly taking possession of the productive forces, which have outgrown all controls, except that of society as a whole.”<sup>23</sup>

Yet what does it mean for society to take possession of the means of production? Society is a highly abstract concept: it could mean all of humanity. This question will be answered later on in this book.

## *7. Some Current Reflections on Twenty-First Century Socialism*

Obviously, we have to go beyond simply looking at the ideas of Marx and Engels. More than 150 years have passed, the world has changed, the new electronic-information revolution has brought with it new challenges and opportunities, and we face an alarming rate of environmental destruction. We are confronted with new questions that require new answers. We need to enrich these ideas with new reflections and proposals. Regarding this task, today we are in a better situation than we were a few years ago.

In what follows, I shall present some of the features that must be key characteristics of 21st century socialism.

### **PARTICIPATORY AND PROTAGONISTIC DEMOCRACY**

#### *Political Democracy and Social Democracy*

As mentioned earlier, socialism came to be associated with a lack of democracy and freedom due to the actions of the Soviet regime. Factions of the left responded to this criticism by saying revolutionaries were only interested in real social democracy, not bourgeois pseudo-democracy. It was pointless to speak of democracy while

people continued to die of hunger, while people were homeless, while people were unable to study, while people continued to die at a young age due to a lack of medical attention.

Today, the experience of these dictatorships has modified people's perceptions and forced many to start valuing political democracy. Some believed it was necessary to fill bourgeois political democracy with a social content.

Alfredo Maneiro, a Venezuelan intellectual and political leader, criticized this thesis, arguing it was not a question of adding a social thing to a political thing; rather, it was necessary to transform the very form of democracy by creating spaces that allowed for people's protagonism.<sup>24</sup>

Maneiro said it was not the same if a community managed to get a pedestrian bridge it had organized and fought for than if the bridge was given to them by the state as a gift. State paternalism is incompatible with popular protagonism.

I believe state paternalism tends to turn people into beggars. We must move from a culture in which citizens beg the state to solve their problems to a culture where citizens make decisions, and through struggle get results; where citizens implement, control, and manage things themselves, where citizens govern themselves. We have to go, as Aristóbulo Istúriz says, from a government for the people to people's self-government, that is to a situation where the people take power.

This participatory and protagonistic democracy is not a democracy solely for the elites, as bourgeois representative democracy is; it is a democracy for the great majority of the people. Within it, the common citizen can participate in a variety of matters, not only in formulating demands and supervision, but more fundamentally in making decisions and ensuring they are carried out.

As Uruguayan political leader Pablo Anzalone said, it is about constructing democratic processes in which the great popular majorities are incorporated into the political arena, both within institutions as well as in practice.<sup>25</sup> This requires a reformulation of the idea of politics, recuperating and emphasizing participatory mechanisms from the local to the national level.

*Human Development through Popular Participation*

Participation, protagonism in all spaces, is what will allow human beings to grow and increase their self-confidence, that is, facilitate human development.

I am almost certain that the Bolivarian constitution is the only one of its kind in terms of drawing a direct relationship between protagonism and integral human development, both individual and collective.

Although there are several articles in the constitution that refer to this subject, probably the most specific one is Article 62, which indicates how to bring about this development. It says, "People's participation in creating, implementing and controlling public policy is the necessary way to achieve the protagonism that ensures its full development, both individual and collective." It then goes on to say that it is "the state's obligation and society's duty to create the conditions most favorable to this participation." Article 70 points to other ways that allow people to develop "their capacities and abilities," such as "self-management, cooperatives of all kinds . . . and other forms of association that are guided by the values of mutual cooperation and solidarity."

As for participation at the local, territorial level, emphasis has been placed on participative diagnoses, participative budgets, and social auditing. Initially, local public planning councils were set up at the municipal level, composed of representatives from already existing institutions (mayors, councilors, members of the parish boards) and community representatives, who together carried out public planning.<sup>26</sup> It is important to note there was a greater percentage of community representatives, as opposed to institutional representatives, on these councils (51 to 49 percent), reflecting the clear political will that existed to encourage community protagonism.

Michael Lebowitz writes, "Only a revolutionary democracy can create the conditions in which we can invent ourselves daily" as fully developed human beings. He adds that the "concept . . .

of democracy in *practice*, democracy *as practice*, *democracy as protagonism*: protagonistic democracy in the workplace, protagonistic democracy in neighborhoods, communities, communes—is the democracy of people who are transforming themselves into revolutionary subjects.<sup>27</sup>

*Protagonism and the Organization of Forces from Below*

The need for popular protagonism is a recurring theme in the speeches of the late Venezuelan president Hugo Chávez and is an element that differentiates him from many other advocates of democratic socialism.

In the first program of “Theoretical Aló Presidente,” broadcast on television and radio on June 11, 2009, he quoted at length from a letter that Peter Kropotkin wrote to Lenin on March 4, 1920. I think it is important to cite the most important ideas read out by Chávez, because they reveal his concerns.

Without the participation of local forces, without an organization from below of the peasants and workers themselves, it is impossible to build a new life.

It seemed that the Soviets were going to fulfill precisely this function of creating an organization from below. But Russia has already become a Soviet Republic in name only. The party’s influence over people . . . has already destroyed the influence and constructive energy of this promising institution—the Soviets.<sup>28</sup>

President Chávez was convinced, and on innumerable occasions stated, that the problem of poverty cannot be solved without giving power to the people.

### *Creating Appropriate Spaces for Participation*

Chávez's ideas would have never gone beyond mere talk if appropriate spaces had not been created where participatory processes could fully and freely take place. For this reason, his initiatives to create communal councils, followed some time later by his proposal for workers' councils, student councils, and peasant councils, were important steps toward forming real popular power. Today this power is also being expressed in the communes.

Only when a society based on worker self-management in workplaces and self-management by residents of their communities is created will the state cease to be an instrument that, standing over and above the people, serves the elites, and instead become a state whose cadres are composed of the best elements of the working people.

One of the most revolutionary ideas of the Bolivarian government was promoting the creation of communal councils, a form of autonomous community-based organization.<sup>29</sup> They are territorial organizations, unprecedented in Latin America because of the small number of participants: between 200 to 400 families in densely populated urban areas, 50 to 100 families in rural areas, and even smaller numbers of families in isolated, mostly indigenous, areas. The idea was to create small spaces that offered maximum encouragement to citizen involvement and facilitated the protagonism of those attending by making them feel comfortable and encouraging them to speak freely.

The idea for these territorially based organizations was arrived at after much debate and after looking closely at successful experiences of community organization like the Comites de Tierra Urbana (Urban Land Committees, CTU), which involved some 200 families organized around the issue of land ownership, and health committees, composed of some 150 families who formed committees to offer support to doctors in the most disadvantaged communities.

If we take a community to mean a group of families who live in a specific geographical space, who know and easily relate to one

another, who can meet without needing to rely on transport, share a common history, use the same public services, and face similar problems, it is estimated that in Venezuela, which has about 26 million inhabitants, there are about 52,000 communities.

Each of these communities will elect a body that will act as a community government. This body is given the name of community council, and the people elected to carry out that task are called *voceria* (spokespersons), from the Spanish *vocero* or *vocera*, which in turn originate from *voz* (voice).

## A PARTICIPATORY DEMOCRACY NOT COUNTERPOSED TO DELEGATED DEMOCRACY

### *The Limits of Direct Democracy*

We must also understand that direct democracy, that is, a democracy in which people debate and decide in assemblies, is not the only acceptable form of democracy. Direct democracy is one form of democracy, undoubtedly the richest and most protagonistic form, but it has its limits.

For everyone to be able to fully participate, the size of the group cannot be excessively large. It is difficult to imagine direct municipal democracy in a municipality with 200,000 people, much less direct democracy in large capital cities made up of millions of people.

Democratic participation cannot remain limited to experiences on a small scale; it has to transcend the community, the factory, and the classroom in order to go from local levels of power all the way to the national level. The same must occur in a factory: along with workers' councils in each workshop or sector, there must be workers' councils in each factory, and each branch of industry. The same must occur in centers of study, with councils in each classroom, faculty, university, and across all universities.

We have to create a system that allows citizens to participate in all decision-making processes concerning specific and general

issues that affect their lives. This requires establishing some form of delegation of power that does not reproduce the limits and deformation inherent in classic bourgeois representative politics.

In this regard, revolutionary Venezuela has taken transcendental steps that mark a new high point in Latin American political history. They have abolished the classic idea of political representation in order to begin creating a political system that combines direct democracy with delegations, or *voceria*. Those that are elected to take part in the communal council are called *voceros* (spokespeople) because they are the voice of the community, and when they cease to be so, because the community no longer feels they are adequately transmitting the ideas and decisions of the community, these people can and should be recalled.

### *Combination of Direct and Delegated Democracy*

In short, building a new political system of popular power or self-government combines direct democracy on a small scale with a whole system of assemblies of *voceros* or delegates at different levels, which then elect, orientate, and control the different organs of government.

A correct critique of bourgeois representative democracy should not lead us to reject all types of representation. What we reject is a democracy that is limited to five minutes of voting every few years, an elitist democracy that makes invisible important sectors of the population who today are beginning to appear on the political scene in different parts of the world, expressing open or implicit critiques of the current political system.

If we believe that big decisions have to be made by the people, we have to be coherent and point out how millions of people, living hundreds of kilometers away from one another, are going to make these decisions. I see no other alternative than delegating some people to represent the positions of their communities at higher levels. Moreover, we have to be clear that if they (in representation of their base) do not make these decisions, others will do it for them.

Denying the possibility of delegation is denying the possibility to participate in decision making on issues that transcend our local reality, that is, the community, workplace, classroom.

Those who today are made invisible will not become visible unless they themselves make their presence felt. This was the error committed by the Zapatistas, who despite having made themselves visible in 1994 through their armed insurrection have subsequently marginalized themselves from national politics and have to a certain extent become invisible once again.

Given this, it is possible to conclude that we need to create a political system of representation, or delegation, though one that is very different from the bourgeois democratic system. The latter views representatives as professional politicians and therefore expects they should be remunerated for their role. Their mandate is seen exclusively as a personal one, and not one that reflects their voters, who are only reached out to at election time.<sup>30</sup> The alternate system of delegation or *vocería* is the antithesis of this conception and practice: elected representatives, delegates, or *voceros* must remain tied to their base, which in turn must supervise and guide the work of that delegate and prevent his or her bureaucratization.

Delegates are not given a blank check for a certain period of time like bourgeois representatives are; rather, they must be guided by the decisions and orientations of their electors, who evaluate their performance in accordance with the tasks they have been assigned. This is what the Zapatistas mean by their idea of “governing by obeying.”

Here we have to clarify that this is not the same as saying the delegate’s mandate is binding. They are not robots that receive messages and simply transmit them; they are responsible and creative people who, faced with the realities of other communities, must be able to modify the mandate they have received once they have seen, for example, that a neighboring community is in a worse situation than their own and therefore should be supported, rather than simply defending one’s own community. As they must

account for their mandate in their community, the delegates will have to return home and explain their decision. They will have to win over their community to an understanding of why, based on reasons of solidarity that justified the decision made, the delegates chose not to comply with the mandate they were given. If the community is not convinced, it has the right to recall delegates because the delegates no longer represent its wishes. In this case, it could be said that the community has yet to mature and take onboard the value of solidarity, and therefore does not deserve a delegate who reflects those values. Let's recall that old saying, "The people get the government they deserve." The same could be said of this community.

García Linera explains this same thing using other words, and in his case referring to those governing at the national level:

To govern by obeying is to affirm every day that the sovereign is not the state, that the sovereign is the people who do not express themselves only every five years through the vote, but rather they express themselves, they speak, they put forward each day their needs, expectations and collective requirements. What is required of the leader is to synthesize and to unite, because the voices of the people can be discordant. The people are not something homogeneous. No sir! There are social classes, there are identities, there are regions. The people are very diverse. The role of those in government is not to substitute for the people but to harmonize the voices of the people, only to synthesize in a sense their concerns. But that does not mean that they are substitutes for the people. To govern by obeying is that the sovereign is the people and the leader is simply a unifier of ideas, someone who articulates their needs, and nothing else.<sup>31</sup>

In order to comply with their roles as *voceria*, these people should be elected from their workplace or community and, as said above, be recallable if they lose the confidence of their electorate.

Moreover, they should not receive a salary, but instead continue working at their normal job. If it is necessary at certain times to dedicate themselves full-time to community work, it should be the community—via its own resources—that pays them a certain sum of money that allows them to cover their basic living costs. In this way, it is even clearer why the delegate should report back to the community. This also avoids transforming community work into bureaucratic tasks that are carried out simply to obtain a salary.

Finally, some communities have taken a healthy approach toward rotating cadres, to avoid a situation whereby certain people eternalize themselves in certain roles, impeding the ability of others in the community to learn how to carry those tasks.

And, of course, it is very important that delegates are correctly selected. Once again, the Venezuelan experience has provided us with some important insights. There, we have seen just how important it is that the election of delegates is carried out properly, with the people knowing the candidates, having seen them in action and thus not solely reliant on what the candidates say.

How do people know who the candidates are? The general practice within a communal council is that, before voting, candidates who nominate themselves for election collaborate in carrying out a socioeconomic and demographic census of the community. This has been very positive, because through the process they are obliged to contact each family in the community.

The elaboration of a brief history of the community, together with the people, has also been very useful, as it has allowed candidates to become more acquainted with the reality they have to deal with.

Another constructive activity has been the organization of a participatory diagnostic that allows them to get to know the real needs and dreams of the people who live in the community.

It is therefore not enough to be able to deliver beautiful speeches to be elected; the people in the community have seen just how dedicated each candidate is to their community. This helps

avoid electing *voceros* who are simply looking for a launching pad for their own political career.

I believe that all this should lead us to conclude that the democratic system we want to build has to combine direct democracy and indirect or delegated democracy.

### DECENTRALIZATION ALLOWS FOR REAL POPULAR PROTAGONISM

I have said that popular protagonism is central to socialism, but promoting participation can become little more than sloganeering if people do not have the opportunity to offer their opinions and make decisions in the areas where they spend most of their time (communities, workplaces, educational institutions, interest groups, etc). If the central state decides everything, there is no room for local initiatives, and the state becomes an obstacle or, as Marx said, ends up hindering the “free movement” of society.<sup>32</sup>

It is interesting to note that István Mészáros believes the Soviet state’s excessive centralization led to “both the Soviets and the factory councils [being] deprived of all effective power.”<sup>33</sup> We should not be surprised, then, when he argues that one of the aims to be pursued in the transition phase is “accomplishing a genuine autonomy and decentralization of the powers of decision making, in opposition to their existing concentration and centralization which cannot possibly function without ‘bureaucracy.’”

#### *Centralization Produces Bureaucratism*

I agree with Mészáros that decentralization is the best way to combat the bureaucratic deformations of the state. This was not the way Lenin saw it: he always related the phenomenon of bureaucracy to the state inherited from capitalism.

Before his death, Lenin was concerned about the “bureaucratic ulcer” affecting the state apparatus.<sup>34</sup> In one of his last writings, he

said, “Our state apparatus is to a considerable extent a survival of the past and has undergone hardly any serious change.”<sup>35</sup> A few days earlier, he described it as a “bourgeois and tsarist hodgepodge.”<sup>36</sup>

In his last article on the role of the unions, written in January 1922, he went as far as to say that “in no way could the strike struggle be renounced” provided that it was directed against the bureaucratic deviations of the proletarian state. He explained that this struggle was very different from the one waged under the capitalist regime, when the struggle was to destroy the bourgeois state; now the struggle was to fortify the proletarian state by combating “the bureaucratic deformations” of the state, its huge weaknesses, and “all kinds of vestiges of the old capitalist regime in its institutions, etc.”<sup>37</sup>

As we can see, Lenin thought the bureaucratic deformations that characterized the Soviet state were a legacy of the past. I believe he was wrong, and this fact prevented him from prescribing the right medicine for this disease. As I understand it, the underlying causes of bureaucratism lay in the excessive centralization of the Soviet state. We know full well what happens when not only strategic decisions but nearly all decisions are made centrally: red tape, endless running around, slowness in enacting, lack of control, lack of response to local problems, brakes put on local initiatives, etc.

### *Only Social Control Can Prevent Corruption*

One of the most important lessons learned by the Cuban government when it failed to meet its ambitious 1970 sugar harvest target was that it was impossible for the socialist state to administer everything centrally, especially so in an underdeveloped country like Cuba. Spaces were required where people could exercise control over the way the state functioned and ensure it operated more effectively.<sup>38</sup> Fidel Castro admitted this in his July 26 anniversary speech in 1970.

“The revolutionary process itself has shown,” he said two months later, “the problems caused by bureaucratic and administrative methods.”<sup>39</sup>

After pointing out the mistakes made as a result of identifying the party with the state administration and allowing mass organizations to become weak, he stressed the role the people should play in making decisions and solving problems:

Imagine a baker's shop on a street which provides bread to all who live there and an administrative apparatus that controls it from above. How does it control it? How could the people not care how that bakery operates? How could they not care whether an administrator is good or bad? How could they not care if people there had privileges or not, if there was negligence or not, insensitivity or not? How could they not care about how it delivered its services? How could they not care about the hygiene problems there? And how could they not care about the production problems, absenteeism, the quantity and quality of the goods? They couldn't!

Can anyone think up a more effective means for controlling that bakery than the masses themselves? Could there be any other method of inspection? No! The person who runs that micro-unit of production could become corrupt; the person who inspects it could become corrupt, everyone could become corrupt. The only ones who are not going to become corrupt are those affected [by all this], those affected!

These ideas were incorporated into Cuba's new constitution in 1976.

The new political model proposed decentralizing to the municipal level as many of the state's functions as possible. Although these institutions had to be subordinated to those above them, they could act autonomously within the established legal and regulatory framework and "should not be submitted to constant and restricting supervision by the institutions above them."

According to Raúl Castro, this mechanism, "in addition to making the higher level bodies work faster and better and more in tune with the demands made by the where and when of the

decisions that have to be taken, frees them, and especially national institutions, of the heavy, voluminous burden of everyday administrative tasks which in practice they cannot properly carry out . . . and which, moreover, prevents them from attending to the important tasks they are truly competent to undertake in areas related to setting standards, control and inspection of the activities they deal with.”<sup>40</sup>

As time went by, experience demonstrated it was necessary to decentralize government administration even further, leading to the creation of the People’s Council in Havana in 1990. This was a government body that functioned in an area smaller than the municipality and whose objective was improving control and supervision over all administrative bodies and finding ways to involve all members of a community in solving their own problems. Jesús García said the idea was to have “a strong government body at the ‘barrio’ level that could organize community forces for solving problems that people had at that level.”<sup>41</sup>

Unfortunately, the great economic difficulties that have beset Cuba over the past two decades placed huge limitations on the resources available for attending to people’s aspirations. Similarly, the People’s Power cadres began to burn out and grow weary, and people lost faith in the experiment, with participation diminishing and often becoming a mere formality. These, and other issues that we cannot go into here, meant that after a bright and creative start, the People’s Power experiment gradually lost its shine.

### *All That Can Be Decentralized Must Be Decentralized*

I am more and more convinced by historical experience that decentralization is the best weapon for combating bureaucratism; it brings government closer to the people and allows them to exercise social control over the state apparatus. I therefore share Marx’s opinion that it is necessary to decentralize all that can be decentralized, keeping as functions of the central state only those tasks that cannot be carried out at the local level.

It is worth rereading Marx's thoughts on the Paris Commune contained in his book *The Civil War in France*. We know about his ideas on the need to destroy the bourgeois state apparatus, to destroy the army, the need to create a communal police, that all public officials be paid a worker's wage, that all officials be recallable, all these things.

But we have often failed to pay attention to the fact that when Marx talked about the need to destroy "state power" he was referring to "centralized state power." The word *centralized* is key, as this is the fundamental characteristic of the inherited state.

His statement is that "the old centralized governments in the provinces would also have to give way to the self-government of the producers."

And he adds something very important:

The few but important functions which still would remain for a central government were not to be suppressed, as has been intentionally mis-stated. . . . The unity of the nation was not to be broken, but, on the contrary, to be organized by the Communal constitution and to become a reality by the destruction of State power which claimed to be the embodiment of that unity independent of, and superior to, the nation itself, from which it was but a parasitic excrescence.<sup>42</sup>

*A Non-Anarchic Decentralization Impregnated with  
a Spirit of Solidarity*

Of course, we are not talking about an anarchic decentralization. There must be a national strategic plan that coordinates local plans. Each of the decentralized spaces should be part of the national whole and be willing to contribute its own resources to strengthen the development of those spaces with the greatest shortages. This kind of decentralization must be imbued with a spirit of solidarity. One of the most important roles the central state can play is just that—implementing a process of

redistributing national resources to protect the weak and help them develop.

### *A Socialist Conception of Decentralization*

After everything I have said, it should be clear that I am not talking about the kind of decentralization that neoliberalism promoted as a global strategy to weaken national unity and the nation-state. What I am advocating here is a different way of looking at decentralization, a socialist conception of decentralization, enshrined in numerous articles in the Bolivarian constitution.<sup>43</sup> I am envisaging a decentralization that, by strengthening communities and communes as the foundation of the nation-state, helps to deepen democracy and strengthen the central state, the fundamental instrument for defending our sovereignty and leading the country toward the new society we want to build.<sup>44</sup>

### **A NEW ECONOMIC MODEL DIRECTED TOWARD SATISFYING HUMAN NEEDS**

Twenty-first century socialism proposes to replace the neoliberal capitalist model with a new socialist model whose main characteristics are:

1. Human development as the center and focus. Socialism is to be governed by the logic of humanism and solidarity and have as its aim the satisfaction of human needs, not profits.
2. Respect for nature, and opposition to consumerism. Our goal should not be to live “better” but to live “well.”
3. As Michael Lebowitz notes, socialism requires a new dialectic of production/distribution/consumption based on: a) social ownership of the means of production, b) social production organized by workers, and c) the satisfaction of communal needs.<sup>45</sup>

4. A new concept of efficiency that both respects nature and seeks human development.
5. Rational use of available natural and human resources through a decentralized participatory planning process that has nothing to do with the hyper-centralized bureaucratic planning of the Soviet state.<sup>46</sup>

### *Social Ownership of the Means of Production*

As Marxists, we know full well that the distribution of the social product depends on how the means of production are distributed in society. For social wealth to satisfy the needs of everyone in a country, it is essential that the fundamental means of production are not monopolized by a few and used for their own benefit, but are instead put under collective, social ownership.

But state property does not equate to social ownership, even if twentieth-century socialism tended to identify them as one and the same thing. Even Lenin insisted on distinguishing between state property and socialization. In this regard, it is important to make the distinction between formal (legal) and real ownership. The state formally represents the collective, but for the people to actually appropriate the means of production (factories, mines, land, services), it requires much more than just a legal act of expropriation of the capitalists and the placement of these means of production under state control.<sup>47</sup>

What happened in the Soviet Union and the countries that followed its example was not real ownership of the production process by the workers, but merely the nationalization of the means of production. They ceased to be owned by a few to become property of the state, which supposedly represented the workers. However, the production process itself underwent very few changes: a big socialist factory differed little from its capitalist counterpart, with workers continuing to be mere cogs in the machine. They had little or no participation in decision making within the workplace. This mislabeled “state capitalism” retained the hierarchical organization

of production, with the manager having “dictatorial” power and orders being delivered from above. I share Pat Devine’s view that we should not use the term “state capitalism” for such situations where most of the surplus produced goes to the state, not private hands (leaders, managers), and is used largely to boost economic development and to satisfy pressing social needs.<sup>48</sup> I will develop the concept of social ownership more fully later on.

### *Production Organized by Workers*

It is not enough for the state to become the legal owner of the means of production. In order to speak of social property, workers need to take the production process into their own hands (appropriate) and be involved in organizing it. Instead of feeling like just one more cog in the machine, they should be able to contribute with their ideas and knowledge acquired through practice, combining thinking and doing, and thereby fully develop as social human beings.

It is interesting to note that in Allende’s Chile it was said that one objective of workers’ participation in the management of state enterprises was “the integral development of the human personality,” and that, since workers have the same rights as any citizen, “it would be paradoxical if they did not have equal rights within the workplace.”<sup>49</sup>

Twenty-first century socialism cannot afford to leave intact work processes that alienate workers. It cannot continue to maintain the division between manual and intellectual work. Workers must be informed about the production process as a whole; they must be able to control it, to review and decide on production plans, the annual budget, and the distribution of the surplus, including its contribution to the national budget.

But can we say that workers are prepared to participate actively in the management of enterprises? Except in rare circumstances, this is generally not the case, precisely because capitalism has never been interested in providing workers with the necessary technical

knowledge to manage enterprises. Here I am referring not only to production, but also to matters related to marketing and finance. Concentrating knowledge in the hands of management is one of the mechanisms that enables capital to exploit workers.

So one of the first steps for promoting self-management or co-management of enterprises is allowing workers to appropriate this knowledge. To do this, they must begin to engage in practical management, while at the same time acquiring training in business and management techniques.

### *Satisfying Communal Needs*

Finally, if the means of production are to be socially owned, and this means owned by all, what is produced should satisfy the needs of the people. Moreover, the surpluses obtained cannot be monopolized by one specific group of workers, but must be shared with the local, national, and (why not?) the international community.

But who determines these needs? In twentieth-century socialism, the central state decided what social needs existed and what to produce to satisfy them. In 21st century socialism, it must be the people themselves who define and prioritize what is produced through a participatory planning process.

### NEW CONCEPT OF EFFICIENCY

Twenty-first century socialism requires a new concept of efficiency, a concept of “socialist efficiency.”<sup>50</sup> This concept cannot replicate the capitalist vision, in which people are productive only insofar as they produce surplus value, and in which productivity is measured by the quantity of goods produced in a given period, regardless of whether or not these goods satisfy people’s needs or are harmful to nature. The efficiency of Japanese multinationals in southern Chile is measured by the amount of timber obtained from the felling of trees in a given time. This measure does not

consider the depletion of Chilean forests and the negative effects this has on the environment.

As Michael Lebowitz writes, efficiency under socialism must take into account two things.<sup>51</sup> First, an enterprise is efficient only if the production process does not destroy the future of humanity, if it does not destroy nature. The second, which is usually not taken into account, stems from the dual nature of what an enterprise produces. Though it might appear that when you transform raw materials into products you only produce commodities, there is another element that is transformed in the process of production, and that element is the workers themselves. When men and women work, that is, transform materials into products, they are also developing or deforming (crippling) themselves. In this sense, an enterprise will be efficient under socialism only if, in addition to being materially productive, it allows workers to develop themselves as rich human beings by combining their thinking and doing through participation in management. But for this participation to be real and not a mere formality, workers need to understand the production process.

Historical experience has taught us that without this education, it is not workers who tend to end up managing the companies that have become social property but rather technicians, who have more knowledge about the productive process.<sup>52</sup>

### *Investment in Human Development*

Training and education should not be thought of as something separate from the workday. On the contrary, every workday should involve a determined amount of time, considered an integral part of work, that is dedicated to worker training and education. Under socialism, investment in the development of workers should be considered productive investment.

Efficiency in a socialist-oriented steel enterprise cannot be measured in the same way as efficiency in a capitalist steel enterprise. The first must dedicate time to preparing workers by providing

technical and management training, and the second will dedicate the entire workday to producing products. If efficiency is measured purely in terms of production levels, the capitalist enterprise may come out ahead—although this cannot be taken as certain, because it ignores the benefits obtained when workers are aware of the meaning and purpose of their labor activity, something that can lead to greater motivation to work and have a positive impact on productivity. If, however, efficiency is measured not only in terms of labor productivity but also in terms of respect for nature and for workers self-development, there is no doubt that a self-managed or co-managed socialist enterprise will outperform a capitalist one.

#### INCENTIVES AND THE LEVEL OF CONSCIOUSNESS IN THE CONSTRUCTION OF SOCIALISM

Getting workers to produce quality products efficiently is one of the challenges facing 21st century socialism. The Soviet system failed in this regard. Fidel Castro was also aware of this when, in a speech to the National Assembly of People's Power in Cuba made before the collapse of the Soviet Union, he argued that socialism had not yet managed to figure out how to replace the role of capitalist whip in encouraging production.

The solution that some have found for achieving this goal has been to use the dull instruments of capitalism, preferring to rely on individual incentives and private property. But are personal incentives or private property the only levers available for stimulating workers?

A sense of ownership over the means of production seems to be an important element in determining the attitude that workers may have toward their work. Why, then, did the classic Soviet slogans “Factories to the workers!” and “Land to the peasants!” fail to work in the Soviet model?

Cuban researcher Darío Machado provides us with an explanation. According to him, “Workers never felt that they were the

owners of the means of production and services” in the Eastern European socialist countries. Though in legal terms they were owners, this did not come hand in hand with participation. While they worked, others above decided “what to produce and how to produce.”<sup>53</sup>

There is a big difference between the state taking ownership of factories and land in the name of workers, and these factories and lands being subject to self-organization and self-management on the part of their workers.

### *Protagonism in the Workplace, an Important Incentive*

Yugoslav President Tito understood protagonism. He rejected the Stalinist bureaucratic state model and tried to promote an economic model of broad worker participation, handing over the means of production for the workers to run under self-management.

Yugoslav workers in self-managed industries achieved positive economic results because they were able to participate in management, they had their views taken into account, and they knew that the results of their labor would be translated into benefits for themselves. Labor productivity greatly increased.<sup>54</sup>

That sense of belonging and commitment also occurred in Venezuela, among workers in the electricity sector.<sup>55</sup> Conscious that the opposition was targeting the electricity company Cadafe, the electrical workers organized to prevent any attempt to sabotage it. As a result of their long struggle against the privatization and virtual dismantlement of the company promoted by previous administrations, these workers began to raise the issue of co-management (*cogestión*) in their struggle to regain control over the company. This experience produced ideas that corrected some of the deviations that had occurred in Yugoslavia.

Since this company was strategically important for the country as a whole, it was necessary to avoid worker management becoming a vehicle for defending the narrow interests of particular individuals and groups. To avoid this, it was seen as vital that, together with

workers and company managers, spokespersons from organized communities also participate in the process of co-management. The electricity company, after all, does not belong to the electrical workers alone, it belongs to all Venezuelans, and their voices also needed to be heard inside the company. They should have an opportunity to point out shortcomings, suggest solutions, and collaborate in their implementation.

In the Venezuelan state of Merida, this type of co-management was introduced in the regional electricity company and obtained excellent results. Service improved significantly. Electrical workers, who had previously been denounced by the community due to the poor service the company provided, are today greeted with affection. Revenue collection has increased dramatically, and illegal access to electric power by households has decreased. These results can be explained by a combination of factors: a district manager proposed by the workers; a general manager who supported this decision; a union leader who had good relations with both the workers and the manager; and regular meetings between workers and communities to discuss how to improve the service. Of crucial importance is the sense of joint responsibility that exists among all parties. However, for this to be viable, workers must have confidence in those running the company. That is why it is so important that the voice of workers be heard when it comes to designating managerial cadres.

“When workers feel that their views are being taken into account, they are willing to work three to four times harder, because they now work with joy,” one union leader told me. “Before they worked for a wage; now it comes from the heart.”

Being able to participate in decision making is the main way to stimulate workers to give their best. In this context, work ceases to be alienating, and the worker is spiritually transformed as he or she starts to feel useful and part of a much larger family that extends beyond his or her own enterprise. In this way, greater self-development can be achieved.

But this goal cannot be realized overnight. Individualism and consumerism have been inculcated into workers and, in general, their motivation to work is tied to economic stimulus. A process of cultural transformation is clearly required. To the extent that people are building the new society and participating in the management of their workplaces, their work becomes an expression of their potential instead of being a burden. To the extent that they are engaging in solidarity actions that create satisfaction, they begin to understand that it is more important to be than to have. As such, moral incentives can increasingly become a force that moves people into action. But this is a gradual process.

In reflecting on incentives and the motivation to work under socialism, it seems important to consider the experiences of the Chinese and Vietnamese agricultural communes. One can see in these experiences the need for a step-by-step process. Mistakes were made when, in the distribution of surplus, excessive emphasis was initially placed on forms of compensation intended for collective use (to meet the needs of the community, especially the children, the elderly, etc.) rather than remuneration according to the contribution of each peasant. As a consequence, peasants who had contributed more preferred to leave the cooperative while the remaining peasants found it necessary to reduce the share of collective compensation in order to lure them back.

*How to Stimulate Some Workers and Not Be Unjust to Others*

Equally important in regard to incentives and motivation is the experience of the MST in Brazil. Its initial policy was one of equal distribution to all households, regardless of what each contributed. This discouraged people who were making more effort and led to vagrancy, when what was needed most was increased production. So the MST shifted to a process of distribution based on days worked, and finally, according to hours worked. This formula proved to be better than previous ones in stimulating

greater effort. It is, however, considered to be unfair, because the productivity of each cooperative member is not the same: a young man, with more strength, can harvest more corn in one hour than an older cooperative partner can. The MST leadership faces the challenge of finding the most effective way to measure the contribution of each working member.

### *Socialism and the Dull Instruments of Capitalism*

It is important to take into consideration what Engels said in 1890 to Schmidt, in reference to a discussion on how distribution should be organized in the future society, and in particular, whether it should conform to the amount of work performed or otherwise. Engels expressed surprise that this discussion had not addressed the relationship that must exist between modes of distribution, on the one hand, and the quantity of products available for distribution, on the other: “The method of distribution essentially depends on *how much* there is to distribute, and that this must surely change with the progress of production and social organization, so that the method of distribution may also change.”<sup>56</sup>

The great challenge before us, then, is how, considering the legacy of the past, we can build the future. Of course, in the beginning it is essential to find ways to encourage work and reward the greatest effort, because it is not fair if those who make a smaller effort earn the same as those who work with determination and enthusiasm. We must also encourage creativity and innovation. But I think there must be a gradual development of measures combining material and moral incentives that begins to change the culture and values of people, until they feel that the best pay, the best incentive for them, is to see that their work is helping to satisfy the needs of others, making them happy, to realize their work is helping to build a better society for all. We cannot build socialism with the dull instruments of capitalism, but we also cannot eliminate these dull instruments overnight. Instead, their role should be gradually decreased, to the extent that we are capable of creating

conditions for cultural transformation that strengthen the role of motivations other than mere individual self-interest. From a society in which people receive according to what they give, we will move gradually to a society in which people contribute according to their capabilities, and receive according to their needs.

### THE CENTRALITY OF PARTICIPATORY PLANNING IN SOCIALISM

Without participatory planning, there can be no socialism. If I place a lot of emphasis on this it is not only because we must put an end to capitalist anarchy of production, but also because it is only through such a process that society can truly appropriate the fruits of its labor. I will now try to demonstrate this assertion.

#### *Means of Production: a Social Heritage*

I argued previously that one of the essential elements of socialism is social ownership of the means of production and said this issue deserved to be developed further. It is time to do so. To understand this concept it is necessary to consider what gives rise to wealth. Marx argued there were two sources of wealth: nature and human labor, which produces use-values using raw materials derived from nature. We must remember, however, that along with living human labor, there is also what the author of *Capital* called “dead labor,” that is, labor embodied in means of production. This past labor is an important factor of wealth production.<sup>57</sup>

The tools, machines, improvements made to land, and, of course, intellectual and scientific discoveries that substantially increased social productivity are a legacy passed down from generation to generation; they are a social heritage—a wealth of the people.

But who owns this wealth, these social assets? Capitalism, through a process of mystification, has convinced us that the rightful owners of this wealth are the capitalists. This is the basis

for their accepting expropriation only if they are compensated for their loss. This also explains why bourgeois legislation does not hesitate to consider such compensation to be fair and natural. Socialism, by contrast, begins by recognizing that wealth is a social heritage that must be used in the interests of society as a whole rather than serving private interests. These assets, incorporating the labor of generations, do not belong to specific people or specific countries, but to humanity.

The question is: how do we ensure that this happens? The only way is to de-privatize these resources, transforming them into social property. But since the humanity of the early twenty-first century is still not a humanity without borders, these action must begin on a country-by-country basis, and the first step is therefore the handing over of ownership of the strategic means of production to a national state that expresses the interests of society.

### *Clarifying the Concept of Ownership*

Before proceeding, we need to understand the concept of ownership of the means of production. This concept can be related to several issues, including the ability to use, to enjoy, and to dispose of the means of production, and therefore the products obtained in the production process. But it is also important to distinguish between juridical property and the actual power or possibility to use, enjoy, and dispose of property.

We will use “effective possession” to refer to the ability of holders of the means of production to put them into action, that is, to have control of or manage the labor process. We will use “real ownership” to refer to the situation in which the effective possession of the means of production is in the hands of those who also have the power to dispose of them and their products.

Marx tells us that in the manufacturing stage, even if the capitalist is the juridical owner of the means of production, he does not yet have complete control over them: the means of production still need to be adapted to humans, and the expertise of workers

still counts. But with expanded industrial capitalism, the contrary occurs. The machinery makes the organization of production independent of the characteristics of the labor force. The workers lose all control of the work process, they are completely separate from the means of production, and the capitalist becomes not only the juridical owner but also the real owner, finally controlling the entire process of production.

On the other hand, it may happen that real ownership and juridical property are not in the same hands. Agricultural land, for example, can be nationalized—that is, transformed into state property (juridical property)—and the right to operate the process of production and to dispose of that land and its fruits can be delegated to communes or regional centers. The state would then have the juridical property, and real ownership would belong to the commune.<sup>58</sup>

However, there may be other combinations, such as when the right to dispose of the means of production and products are in the hands of people other than the producers. This is the case of servile production, in which the landlord has legal ownership of land and thus gets a share of the product, while the serf working with his own means of production creates the product and is therefore left with another part of that product. Here the direct producer, to whom the lord has granted a piece of land, has effective possession.

### *State Property: A Juridical Change*

Under the initial phase of socialism, the placement of the principal means of production in state hands represents nothing more than a juridical change of property. The subordination of workers to an external force continues; there are new socialist managers, but the alienated status of the workers in the production process remains unchanged. This is formally collective property, because the state represents society, but real appropriation (ownership) is still not collective. That is why Engels argues:

State ownership of the productive forces is not the solution of the conflict, but concealed within it are the technical conditions that form the elements of that solution. This solution can only consist in the practical recognition of the social nature of the modern forces of production, and therefore in the harmonizing of the mode of production, appropriation and exchange with the socialized character of the means of production. And this can only come about by society openly and directly taking possession of the productive forces, which have outgrown all controls, except that of society as a whole.<sup>59</sup>

*Participatory Planning: How Society Can Take the Means of Production into Its Own Hands*

But what does it mean for society to take possession of the means of production? Society is a highly abstract concept: it may be all of humanity. In my understanding, what we need to determine is who should have effective possession of those means of production, that is, who should be entitled to use, enjoy, and dispose of those assets. It is here that Pat Devine's contribution of distinguishing among different levels of social ownership seems important to me. Each level is associated with who is "affected by decisions over the use of the assets involved, in proportion to the extent to which they are affected."<sup>60</sup>

According to this logic, a bakery that produces bread and sweets for a given geographic area (for example, a commune), whose workers live in that area and whose raw material also comes from nearby farmers within the local area, should be owned by that commune. It makes no sense for that bakery to be owned by the nation as a whole.

In contrast, in the case of a strategic sector such as oil, it would be absurd for the oil workforce to claim ownership of a resource that belongs to all inhabitants of the country (or even to humanity as a whole). This doesn't mean, however, that those workers should not play a decisive role in the management of the

enterprise, especially in the production process. Its surplus should be devoted to new investment in the enterprise, to improving the living conditions of its workers and the surrounding community, and should also provide a substantial contribution to the national budget. The legal ownership of this enterprise should be in the hands of the state; the effective possession or control of the production process should be in the hands of the enterprise's employees; but the destination of the product, once investments and labor remuneration have been deducted, should be defined by society as a whole.

How, then, does the commune (in the first case) and society (in the second) define what is to be done with the fruits of productive activity? Here is where the participatory planning process must play an essential role. This is very different from bureaucratic planning.

I share with Pat Devine the idea that the actors in participatory planning will vary according to different levels of social ownership. In the case of the community bakery, decisions on how much to produce, with what raw materials, what quality, what variety, when the product should be ready, how to distribute it, how much to invest in maintaining or expanding the enterprise, etc., should be made not only by those who work in the bakery but also by the people who produce the raw material used and by the consumers of bread and sweets. In the case of the oil enterprise, while its workers must participate in management, decisions concerning reinvestment, new investment, marketing, the destination of the rest of the surplus, etc., must involve the entire society. In both cases, the local society or the national society should be present through its various representatives or spokespersons.

Social ownership is one of the central features of socialism. To ensure that social ownership is not merely formal juridical property, society must "openly and bluntly take possession" of these means of production through the exercise of participatory planning. The manner in which this is done will depend on the level of social property in question.

## 8. *Transition and Its Varieties*

Up till now we have spoken about some of the characteristics of this new society that we want to build, but you may be asking, how long will it take us to reach this goal? History has shown that “heaven” cannot be taken by storm, that a long historical period is needed to make the transition from capitalism to a socialist society. Some talk in terms of decades, others of hundreds of years, and yet others think that socialism is the goal we must pursue but that perhaps we shall never completely reach.

We call this historical period “the transition to socialism.” We should distinguish between three kinds of transition to socialism: transition in advanced countries, transition in backward countries where state power has been conquered, and finally, transition in countries where only the government is in our hands.

### TRANSITION IN ADVANCED COUNTRIES

The most common interpretation of Marxism up until the Russian Revolution maintained that socialism would start with the more advanced countries, where capitalism itself had created the material and cultural conditions for it. Revolutionary access to state power was thought to be the *sine qua non* that would make it

possible to expropriate the expropriators, create producer associations, and convert the state into an expression of society instead of a body above it. A high level of development of productive forces was also considered to be an indispensable condition.

This idea of transition—which never actually took place—has been used as an argument against Marx, but this only reflects that those who raise this issue have not read his later writings, in which he modified his initial vision and began to focus much more on the political, rather than economic, conditions for revolution.

In his September 27, 1877 letter to Friedrich Adolph Sorge, Marx maintained: “This time the revolution will begin in the East.” Why did he say this? Due to the political situation he could see brewing in Russia at the time, everything seemed to indicate that a war between Russia and Turkey would break out, and that the Russian government would be defeated, with grave economic and political consequences flowing out of this defeat. All of this was to occur in a situation of complete economic, moral, and intellectual disintegration in which Russian society found itself.<sup>61</sup> But Marx not only foresaw the possibility of political revolution in a backward country; he also saw the possibilities arising out of the tradition of collective property in the countryside, which could provide the basis for a transition from the commune to socialism that bypassed a period of capitalist agriculture.<sup>62</sup>

### TRANSITION IN BACKWARD COUNTRIES WHERE STATE POWER HAS BEEN WON

History demonstrated that Marx was right. The construction of socialism did not begin in advanced capitalist countries that had a large and experienced industrial working class but in countries where capitalist development was only just beginning, whose population was predominantly peasant, and whose working class was a minority of the population.

Why did it happen like that? Because political conditions outstripped economic conditions.

The outcome of the February 1917 Russian Revolution was that the bourgeoisie gained power, but power was shared between it and the workers and soldiers soviets. This revolution was considered by Lenin to be an unfinished revolution, “the first stage of the first of the proletarian revolutions which are the inevitable result of war.”<sup>63</sup> According to Lenin, it was the horrors of the imperialist war that had led to these proletarian insurrections, and these evils could only be cured if the proletariat took power in Russia and adopted measures that, even if not yet socialist, were steps toward socialism.

Lenin was fully aware that the backwardness of his country would prevent the immediate installation of socialism, but he also saw with total clarity that the only way they were going to be able to get the country out of the critical situation the war had led them into was by taking steps toward that goal.<sup>64</sup> He wrote:

From April 1917 onwards, long before the October Revolution, that is, long before we took power, we declared publicly and explained to the people: the revolution cannot stop at this stage (the bourgeois revolution) since the country had moved forward, capitalism has advanced, misery has reached levels never before seen, which (whether you like it or not) will demand that steps are taken in the direction of socialism since there is no other way of moving forward, of saving the war-weary country, and of alleviating the suffering of the workers and the exploited.<sup>65</sup>

A few weeks before the October Revolution, Lenin gave an exhaustive explanation of the analysis he had often repeated in the preceding months:

It is impossible to stand still in history in general, and in wartime in particular. We must either advance or retreat. It

is *impossible* in twentieth-century Russia, which has won a republic and democracy in a revolutionary way, to go forward without *advancing* toward socialism, without taking steps toward it (steps conditioned and determined by the level of technology and culture: large-scale mechanized production cannot be “introduced” in peasant agriculture nor abolished in the sugar industry). But to fear to advance *means* retreating.<sup>66</sup>

The Russian Revolution thus shattered European Social Democracy’s traditional preconceptions. The proletarian revolution was victorious when the objective premises for socialism did not yet exist in Russia, when the development of the productive forces had not yet reached the level of development that makes socialism possible. The leaders of the Second International drew the conclusion, therefore, that it was a mistake for the proletariat to have taken power and to have embarked on the construction of socialism, that it should have gone down the road of capitalist development and Western European bourgeois democracy.

Lenin, in one of the last things he wrote, in January 1923, railed against those who supported this thesis. He maintained that these people had not reflected on the reasons why the revolution first broke out in Russia and not in the advanced European countries. They did not realize that the war had created a hopeless situation in Russia and, concomitantly, the political conditions for a combination of a peasant war with the workers’ movement, creating a balance of forces such that it made it possible to overthrow tsarism and big imperialist capital. What should they do next? Should they have rejected the road of the socialist revolution because they did not yet have all the material and cultural prerequisites for building socialism?<sup>67</sup>

“You say,” Lenin said, referring to the Social Democrats’ ideas, “that civilization is necessary if we are to build socialism. Very well. But why could we not first create such prerequisites of civilization in our country by the expulsion of the landowners and the Russian capitalists, and then start moving toward socialism?”<sup>68</sup>

Yet even if Lenin thought that Russia had to go down the socialist road because it was the only way to solve the serious problems caused by the war, he was not unaware that it was an extremely difficult task and knew that “the final victory of socialism in a single country is of course impossible.”<sup>69</sup>

It was also the political conditions caused by the Second World War that allowed revolutionaries to take state power in Eastern Europe and then in Africa and Asia and use that power to begin the transformations designed to bring about socialism.

### TRANSITION IN COUNTRIES WHERE ONLY THE GOVERNMENT HAS BEEN CONQUERED

Our situation in the 1980s and 1990s was in some way comparable to that experienced by pre-revolutionary Russia in the beginning of the twentieth century. What the imperialist war and its horrors were for Russia, neoliberalism and its horrors were for Latin America, in the extent of hunger and misery, increasingly unequal distribution of wealth, destruction of nature, and increasing loss of our sovereignty. In these circumstances, our peoples said “Enough!” and embarked on a new path, resisting at first, and then going on the offensive, making possible the victory of left-wing presidential candidates with anti-neoliberal programs.

These Latin American political leaders faced the same dilemma that confronted the Bolsheviks in Russia: either use capitalist measures to try to take our countries forward, which would mean more suffering for our people, or begin to build an alternative to capitalism, heading toward another model that makes our people the main builders of the new society.

In other words, faced with the evident failure of neoliberalism as it was being applied—and which had demonstrated itself as being incapable of resolving the problems of the people—there emerged the following dilemma: either the neoliberal capitalist model is rebuilt, evidently with changes, such as a greater focus

on social issues, but still motivated by the same capitalist logic, or advances are made in constructing an alternative project. However, even if there are similarities between what happened in the USSR and what is happening in Latin America, the situation facing our “left” governments is even more complex than that which faced the Soviet government.

In advancing toward this alternative project, there are great differences between the diverse “left” governments in Latin America. Some have limited themselves to adopting important social policies but have not broken with the neoliberal economic model, even if they have made efforts toward developing a productive national capitalism.

Others have decided to embark on a truly alternative path—a path toward socialism—knowing that the objective economic conditions in which they find themselves oblige them to coexist with capitalist forms of production for a while to come.

#### *How to Advance Having only Conquered Governmental Power*

For this group, the dilemma exists as to how to move toward socialism when only governmental power has been won. This makes the situation much more complex. These countries not only have to confront backward economic conditions but also the fact that they still do not have complete state power.

It is not only that the economic, material, and cultural conditions in our countries are not favorable to building socialism, but also that the most important condition is lacking, one that until now has been considered indispensable: we do not have complete state power; we only have a tiny part of it. Let us remember that the power of the state is not limited to the executive branch but also includes the legislative and judicial branches, the armed forces, local government bodies (municipal and state governments), and other institutions.

*The Difference between Becoming the Government  
and Conquering Power*

Governmental power is not the same thing as conquering state power. This was one of the errors that some sectors of the left made in Chile. People said, ignoring the existing balance of forces, that we had conquered power and thus all we had to do was implement our program.

It cannot be denied that having won the government, we gained a modicum of political power, but equally, it must not be forgotten that, although we had very large left parties and a fairly strong labor movement on our side, we did not have the armed forces, and we had a minority in Parliament. We never won an absolute majority in any election. The Christian Democrats still had a large following, not only in the middle and upper classes but also among workers and peasants. This partly explains why the Popular Unity, the political coalition that supported Allende, never proposed holding a constituent assembly. What it did was to use the existing legislation and look for legal loopholes. Some laws passed in the 1930s by a socialist government that had existed for 100 days were still in effect. Using those laws, we were able to go ahead and nationalize the most strategic sectors of the economy, which was referred to by Popular Unity as the “areas of social property.”<sup>70</sup>

I agree with those that believe achieving state power is a complex process, one of whose most important aspects is to achieve control over the armed forces, or what has been called “the monopoly of violence.” This is why Hugo Chávez insisted that there was a fundamental difference between the process led by Allende in Chile and the Bolivarian revolutionary process: the first was an unarmed peaceful transition, whereas Venezuela’s is an armed peaceful transition, not because the people are armed, but because the great bulk of the armed forces supports the process.

*Using the Inherited State to Promote the Creation of  
a New State Built from Below*

We should recognize that our governments inherit a state apparatus whose characteristics work well in a capitalist system but are not suitable for a journey toward a humanist and solidarity-infused society, a society that not only places human beings at the center of their own development, but also makes them the leading actors in the process of change.

Nevertheless, practice has demonstrated that, contrary to the theoretical dogmatism of some sectors of the radical left, you can use this inherited state and transform it into an instrument that collaborates with building the new society.

The fact that state institutions are run by revolutionary cadres who are aware that they should aim to work with the organized sectors of the people to control what the institutions do and press for transformation of the state apparatus can make it possible, within certain limits, for these institutions to work for the revolutionary project.

But we must be clear that this does not mean we can simply limit ourselves to using the inherited state. It is necessary that the foundations of the new political system are built up by the revolutionary government using the power it is able to employ, creating adequate spaces for popular participation, preparing the people to exercise power at all levels, from the most simple to the most complex. By doing that, they promote the creation of the new state from below, or a non-state that will replace the old state, “the government of persons replaced by the administration of things,” as Engels wrote.<sup>71</sup>

There are people—like Valter Pomar—who think that as long as this condition does not exist, as long as the working class has not taken state power, it is only possible to speak of “the struggle for socialism but not of the transition to socialism.”<sup>72</sup> I do not share this opinion because I think that what baptizes a process with the name *transition* is the aim that it pursues and the measures used to

achieve it. Of course, these measures must be consistent with the aim pursued, as we shall see below.

I agree with Pomar that “conquering state power is a complex process,” but I think this process can be initiated precisely by left forces taking government power.<sup>73</sup>

### TO EACH COUNTRY, ITS OWN TRANSITION

I have previously noted that some of our governments have begun a process of transition toward socialism, but undoubtedly each process is very different from the next.

As Michael Lebowitz says, “Socialism does not fall from the sky.” Every society has its own unique characteristics that differentiate it from other countries, and therefore although there may be a shared goal, the measures that are taken in the transition process must be adapted to the specific conditions of each country. It must necessarily be rooted in a particular society.

#### *History and Traditions*

Every country has a unique history, its unique traditions (including religious and indigenous ones), its mythologies, its heroes who have struggled for a better world, and the individual capacities that people have developed in the process of struggle.<sup>74</sup>

#### *Starting Points*

The starting points of each transition process are different, too. The measures that are adopted will depend on the conditions that exist when the process begins: the specificities of the inherited economic structure, the level of development of the forces of production, the way in which daily life expresses itself, the population’s educational level, etc.<sup>75</sup>

*Correlation of Forces*

What's more, each transition will be shaped by the correlation of forces that exists between those who want to move forward with the construction of a new society and those who want to prevent change, and by the level of class struggle at both the domestic and international levels.

*Historical Actors*

Finally, depending on the class structure of each country and the history of its struggles, the historical actors who work for the transition will be different. In some cases they might be working-class parties, in others, indigenous and peasant movements, in others, a sector of the military, and in others, charismatic leaders.

Implicit in all this is the idea that there cannot be a general theory of transition; rather, each country must design its own particular strategy for the transition. This will depend, among other things, "not only on the economic character of that country but also on the way the class struggle is waged there," and this strategy should guide the way the process advances.<sup>76</sup>

Nevertheless, even with all these variants, in the current situation in Latin America and the Caribbean, all of our transition processes, as we have seen, have one common feature: we are "transitioning" peacefully. This means starting out from what is inherited from the previous regime and, little by little, transforming it, first of all by taking over the government.

*Duration of the Transition*

For some, this process will last decades. For others, such as Samir Amin, it will take centuries, just as capitalism took centuries to consolidate itself. And there are those, such as myself, who see it as a utopian goal that lights the path, that orients the struggle, but one that we will never fully achieve. This is not being pessimistic,

as some might think. On the contrary, a utopian goal that is well defined helps us chart our course and strengthens our resolve to struggle—and each step that brings us closer to the horizon, as small as it may be, is considered positive.

### A PROCESS FULL OF CHALLENGES

This process of transformation, of advancing toward the new society we want to build from the government, is not only a long process but also a process full of challenges and difficulties, as can be seen from what was said above. Nothing ensures that it will be a linear process; there is always the possibility of retreats and failures.

#### *Defeating the Conservative Offensive*

We should always remember that the right only respects the rules of the game as long as it suits their purposes. To date, there has never been a single example anywhere in the world of a ruling group that willingly gave up its privileges. The fact that they agree to withdraw from the political arena when they think a retreat may be in their best interest should not deceive us. They may tolerate and even help bring a left government to power if that government implements the right's policies and limits itself to managing the crisis. What they will always try to prevent, by legal or illegal means—and we should have no illusions about this—is a program of democratic and popular deep transformations that puts into question their economic interests.

It may be deduced from this that the left must be prepared to confront fierce resistance. These sectors will oppose and maneuver to recover their lost power. The left must be capable of defending victories achieved democratically.

*Electoral Agenda Collides with Popular Power*

Another smaller, but no less important challenge has to do with the electoral cycle that left governments have to submit themselves to in order to re-legitimize themselves in the face of constant opposition attacks, while giving continuity to the process of change under way.

On many occasions, this agenda can clash with the agenda of building participatory democracy. The process of construction of popular power tends to be postponed or weakened to make way for electoral campaigning. Campaigns tend to be carried out in a populist manner in which priority is given to solving problems for the people rather than encouraging people to organize and solve their problems themselves.

In this sense, one of the first things that we must do is to avoid using the same techniques used to promote candidates in the bourgeois electoral system when seeking votes, and instead focus on educational, pedagogic campaigns that help raise people's consciousness and organizational capacity.

We also have to factor in that candidates do not always compete on an equal footing: those who have access to the media or use the state apparatus for their campaigns have an important advantage in relation to everyone else.

*Contradiction between Political Conjunctures  
and Democratic Processes*

At the same time, it is not easy to resolve the dilemma posed by the contradiction between political conjunctures that might best be dealt with immediately and democratic processes. On many occasions some have wanted to extend the time to debate laws or new constitutions, which could have helped enrich the democratic discussion but could also have put at risk the future of the democratic process.

This is what occurred with the constituent process in Venezuela and Ecuador. Both processes sought to achieve the greatest possible level of citizen participation in discussions about the new constitution. The popular response was so great that the time-frame set for the process turned out to be too short. As such, the issue of extending the deadline to allow for greater participation came up. However, this brought with it potentially negative political consequences, and in both cases it was decided to sacrifice the democratic process due to the political conjuncture.

In Ecuador the first deadline turned out to be too short, so it was decided to extend it, which was allowed under the regulations governing the Constituent Assembly. However, even this deadline turned out to not be enough, and Alberto Acosta, then president of the Constituent Assembly, tried to convince the political leadership of the socialist party Alianza PAIS to support a further extension. The political bureaucrats decided against this course of action, and Acosta resigned from his post. The argument used to defend this position was that if the discussion and dialogue process continued to drag on, the final product could potentially be at risk, as the opposition was using the deadline extension to wage a campaign against the government, arguing that its real motive was to assume full power and do away with Congress. It must be recalled that when the Constituent Assembly was elected, it was decided that Congress would go into recess until the new constitution was approved or rejected by the people in a referendum. Parliamentarians were sent home. This would ensure that Congress could not interfere with the Constituent Assembly, while stopping short of dissolving it.<sup>77</sup>

I believe that those who most deeply sense the dilemma of political conjunctures and democratic processes are the intellectuals, and that is why I want to recall what Carlos Matus wrote regarding the relationship between politicians and intellectuals: "While the dilemma for some intellectuals is to occupy their time with theorizing without giving up action . . . for some politicians it is about carrying out actions while continuing to theorize. This

dilemma leads each of them to attack the other, and means they are unable to recognize the capacities and contributions that each group makes.”<sup>78</sup>

These are all realities that we will need to face up to in the future. The great challenge we face is how to build alternative institutions. How do we maximize the positive aspects and minimize the negative ones in order to accumulate the forces we need to continue advancing down the path of change and avoid returning to the past?

Moreover, advances come at a slow pace and, confronted with this, many leftists tend to become demoralized. Many of them see the capture of governmental power as a magic bullet that can quickly solve the most pressing needs of the people. When solutions are not rapidly forthcoming, disillusionment sets in.

### *The Need for a Pedagogy of Limitations*

I believe that, just as our revolutionary leaders need to use the state to change the inherited balance of forces, they must also carry out a pedagogical task when they are confronted with limits or brakes along the path—what I call a “pedagogy of limitations.” Many times we believe that talking about difficulties will only demoralize and dishearten the people, when, on the contrary, if our popular sectors are kept informed, and it is explained to them why it is not possible to immediately achieve the desired goals, this can help them better understand the process in which they find themselves and moderate their sometimes politically unrealistic demands. Intellectuals as well should be widely informed so they are able to defend the process and also criticize it if necessary.

But this pedagogy of limitations must be simultaneously accompanied by the fomentation of popular mobilizations and creativity, thereby avoiding the possibility that radical initiatives from the people become domesticated and generate circumstances in which we come to accept unwarranted criticisms of possible faults within the government. Not only should popular pressure

be tolerated, it should be understood that it is necessary to helping those in government combat errors and deviations that can emerge along the way.

## *9. Making Progress When the Government Is in Our Hands*

Thus far, I have given a broad overview of the characteristics we see as essential to 21st century socialism. Now we will go into some of the concrete measures that can be taken in order to move toward that goal, using the state bequeathed to us. This requires a fundamental condition: that revolutionary cadres, instilled with the political will to do so, run the inherited state.

### **MOVE TOWARD A NEW REGIONAL INTEGRATION**

A lot of ground can be covered in the international sphere once in government. Imbued with the ideas of Simón Bolívar regarding the need to unite our countries, certain Latin American governments have begun creating institutions that have allowed them to reassert their sovereignty, depend less on global power blocs, and liberate themselves from the dictates of the Washington Consensus. The creation of ALBA, Petrocaribe, Telesur, Radio del Sur, Banco del Sur, UNASUR and its Defense Council, the sucre (ALBA's trading currency unit), CELAC, and many other initiatives means that we have moved quite a distance in this direction.

## CHANGING THE RULES OF THE INSTITUTIONAL GAME

One of the first tasks of the more advanced governments of the region has been to change the rules of the institutional game by means of a constituent process that has allowed them to develop new constitutions.

On coming to power, the presidents of Venezuela, Bolivia, and Ecuador promoted constituent processes resulting in new constitutions being approved by referendum with majority support. Venezuela's Bolivarian constitution was passed in December 1999; Ecuador's new constitution was approved in September 2008; and the Bolivian constitution in February 2009. Honduran president Manuel Zelaya also wanted to push forward with a constituent process, a move that ultimately ended with his overthrow via a military coup.

One of the most notable elements of the Bolivian and Ecuadorian constitutions was the creation of plurinational states that for the first time recognized the historically excluded indigenous nations.

However, though it is not possible to build socialism via the peaceful road without carrying out a constituent process, this issue cannot be dealt with in a voluntarist manner. It only makes sense to promote a process of this type once revolutionary forces believe they can obtain the required electoral support required to ensure the approval of the necessary changes. It makes no sense to promote a constituent process if the end result is the approval of a new institutional framework that will act as an obstacle to change.

This was precisely why the UP in Chile decided against convoking a constituent assembly: they were unsure they could win. But I have always wondered, what would have happened if we had pushed our forces to the limit and gone door to door promoting this issue? It is important to remember that when the opposition in Venezuela proposed a recall referendum as a means to remove Chávez from power, the polls indicated they had a majority, and there was a real risk that the vote against Chávez would win.

Nevertheless, Chávez decided to accept the challenge and campaigned hard to build a correlation of forces capable of ensuring his victory.

That is why I have asked myself what the possibilities are for converting the generalized discontent that exists among Chileans toward the current institutional framework—something the youth of my country have so brilliantly exposed with their struggles—into a demand for a constituent assembly that no politician could oppose, if we tapped into this discontent by carrying out a consciousness-raising campaign on this issue, going door to door, classroom to classroom, workplace to workplace?

### CONQUERING SPACES THAT USED TO BE CAPITAL'S DOMAIN

It is also possible, using the inherited state, to start a process of recovering spaces that were lost as a result of the privatizations undertaken during the neoliberal period and begin creating new spaces under the control of the people's government.

#### *Advances in Venezuela*

The clearest example of this in Venezuela was the recovery of the oil company PDVSA. Although formally in the hands of the state (it had been nationalized in August 1975 under Carlos Andrés Pérez), it was not run by the government but by neoliberal managers with their own agenda that coincided with the interests of the dominant economic groups. The sabotage of the oil industry in December 2002–February 2003 allowed the Venezuelan government to remove the coup-supporting, anti-national managers and replace them with new managers who supported the Bolivarian process. This meant the government could recover control of the company and use the surplus for social use.

The Venezuelan government has also been able to nationalize or re-nationalize important strategic companies such as the steel

factory SIDOR as well as cement, plastic, and telecommunications companies and food processing installations, such as Conservas Alimenticias La Gaviota (a sardine tinning plant), Lácteos los Andes (Andes dairy products), sugar mills, silos, coffee-roasting plants, and refrigeration storage companies.

The state also took over one of the biggest private banks, the Banco de Venezuela, which belonged to the Spanish-owned Grupo Santander, and more recently took control of the Exito chain of supermarkets.

In 2010, further expropriations aimed at establishing food sovereignty were carried out. Among the companies nationalized were Sociedad Mercantil Molinos Nacionales (Monaca), a food company majority-owned by the Mexican group Gruma; Envases Internacional and Aventuy, which produce aluminum cans and food packaging, respectively; the Spanish-owned Agroislena, which, with its eighty-two outlets and eight silos, is the largest distributor of agricultural products and equipment in the country; and the Venezuelan unit of Owens-Illinois, a world leader in the production of glass packaging for foods, drinks, medicines, and cosmetics.

### *Advances in Bolivia*

Bolivia has also made important advances in terms of nationalizations.<sup>79</sup> These have been a crucial component of the new economic model implemented by the Morales government and have included the return of the hydrocarbon sector to state hands. On May 1, 2006, the government decreed the nationalization of hydrocarbons, including gas, the main source of wealth for the country. The decree completely changed the way in which different players participate and benefit from the process of extraction. Under the new contracts, transnational corporations no longer appropriate 82 percent of the wealth, but instead receive between 10 and 18 percent. In a single year (2011), the Bolivian state received more income from the hydrocarbon sector than it had during the ten

years prior to Morales's election. The state company YPFB was strengthened in order to take on the leading role in the nationalization process, and the Empresa Boliviana de Industrialización de los Hidrocarburos (Bolivian Company for the Industrialization of Hydrocarbons, EBIH) was created.

The government has also taken steps toward industrializing gas, among them the construction of two gas processing plants, the first of which came online in 2013, while the other will begin functioning in 2014.

In terms of the other strategic sector, mining, the Posokini deposit in Huanuni was nationalized in 2006. But there have been a number of difficulties in this sector, largely as a result of neo-liberal policies that saw large mines carved up and handed out to small operators, many of them cooperatives. At the same time, mineworkers in the private sector have opposed nationalization. This explains the conflicts that have arisen between private sector mineworkers and cooperative miners.

In May 2010, the Morales government nationalized four electricity companies: Corani, Guaracachi, Valle Hermoso, and the cooperative distributor Empresa de Luz y Fuerza Eléctrica in Cochabamba. Two years later, it expropriated the shares that Red Eléctrica de España (REE) owned in the company Transportadora de Electricidad (TDE) and expropriated shares in the La Paz and Oruro electricity companies. In doing so, the Bolivian state transformed itself into the key player in this sector.

The same occurred in the telecommunications sector. On May 1, 2007, the government decreed the nationalization of the telephone company Entel, an affiliate of the Italian-owned Euro Telecom International. Within four years (2008–2012), the telecommunications sector has grown by 326 percent.

### *Advances Made in Ecuador*

Thanks to the resistance against privatization by various social and political fronts, the privatization trend in Ecuador did not affect

strategic sectors as much as it did in Bolivia and other countries. Ecuador inherited state or municipal companies in the area of oil and electricity, but they functioned according to a private and privatizing logic. During Correa's government, a total of eleven public companies have had to be restructured, and ten new companies have been created. Ecuador and Venezuela have also joined forces to create the Gran Nacional Minera Mariscal Sucre (Grand National Mining Company Mariscal Sucre).

According to Ecuadorian economist Magdalena León, Ecuador has utilized its state control over strategic sectors to promote the government's vision of economic sovereignty, energy independence, and wealth redistribution.<sup>80</sup> That is why it was necessary to carry out deep changes to the legal framework inherited from neoliberalism that protected the control transnationals and private interests had over strategic resources.

In the oil sector, reforms have led to new contracts with private companies that until then were reaping extraordinary benefits from windfall profits due to high international oil prices. As of April 2013, 100 percent of windfall profits were being captured by the state, with state oil revenue jumping from \$838 million to \$1,639 million. The state is also promoting the construction of a new refinery (Refinería del Pacífico) and has improved the Refinería Estatal de Esmeraldas, thereby beginning to reverse the paradoxical and disadvantageous situation Ecuador finds itself in, exporting crude oil and importing processed derivatives.

The government has also attempted to bring together different institutions, norms, and public policies to deal with strategic sectors in an integral manner, not only in terms of recuperating state control but also promoting a change in the productive and energy model toward a post-extractivist economy. Within this framework, public investment in strategic sectors has already surpassed \$10 billion. This includes funding to conclude the delayed construction of two large hydroelectric projects, which will mean hydropower's contribution to energy generation will rise from 48 percent to 94 percent by 2020.

Telecommunications services have also expanded and been democratized. Between 2007 and 2012, access to the Internet quadrupled, and the number of schools with access to this service went from four to 1,400.

A significant part of the resources obtained through state control over strategic companies has been redirected toward meeting the immediate needs of the peoples of these countries.

### CHANGING THE RELATIONS OF PRODUCTION

These Latin American governments are capable of going about implementing a coherent strategy toward changing the relations of production. However, these changes won't happen overnight. It is a complex process that needs time. As Michael Lebowitz says: "It is not simply a matter of changing property ownership. This is the easiest part of building the new world. Far more difficult is changing productive relations, social relations in general, and attitudes and ideas."<sup>81</sup> It is therefore necessary to design a coherent strategy aimed at transforming the existing relations of production into the new relations that are the hallmark of 21st century socialism. The steps to be taken and the speed with which these can be implemented will depend on the starting point and on the existing balance of forces.

To explain this more clearly, I list below some of the steps that will have to be taken first, when dealing with state-owned companies, second, when dealing with cooperatives, and third, when dealing with capitalist companies.

#### *1. State Companies*

It goes without saying that the easiest transition is the one that can take place in state companies, because these are formally owned by society in general and are explicitly directed toward serving the interests of that society.

In such companies, it would be possible to move from formal ownership to real appropriation by:

- creating workers councils that allow workers to play a part in running the company;
- organizing production to satisfy communal needs;
- opening the books and ensuring complete transparency, thereby allowing workers to exercise a social accounting function and combat waste, corruption, and bureaucratic interest;
- electing managers who share this vision and who have the trust of the workers;
- applying a new type of efficiency in these companies that, as productivity improves, makes it possible for the workers to achieve more and more human development (introducing a workday that includes time for worker education so involvement in management is truly effective and not merely formal), and also respects the environment.

According to Michael Lebowitz, it is possible that specific companies that follow this type of social policy may not initially be profitable, but because these policies can be thought of as social investment, all of society should cover their costs.

## *2. Cooperatives*

Cooperatives must be encouraged to overcome their narrow focus on the interests of the group that makes up the cooperative. How can this be achieved? One way to do it is to develop organic links with the rest of society.

In order to do this, it is important to encourage:

- forging links between cooperatives so they relate to each other in a cooperative and not a competitive way. In some cases it might be possible to integrate their activities directly without them being separated by commercial operations, and;

- forging relations between cooperatives and the communities. This is the best way to begin to move away from the private interests of each cooperative and focus on the interests and needs of people in general.

### 3. *Capitalist Companies*

It might be possible to gradually transform capitalist companies by finding various ways to subordinate their economic activity to the interests of the national economic plan. Michael Lebowitz has called this “socialist conditionality.”

These measures could include:

- demanding transparency and open books, so that communities and workers can inspect them;
- using a system of prices and taxes that obliges companies to transfer a portion of their surpluses to other sectors of the economy, thus making it possible to set up new companies or to improve social services for the population;
- using competition with state companies or subsidized cooperatives to oblige the capitalist companies to lower their prices and reduce their profits;
- using government regulations that require companies to transform the workday so that a given number of hours is set aside for educating workers, and require them to implement specific ways for workers to participate in making decisions about how the company will be run.

But why would capitalist companies accept such impositions if they can move to other parts of the world where these costs do not exist? They might be willing to do so if the owners have a strong patriotic consciousness and if the revolutionary government rewards their collaboration with the national development plan by giving them easy access to loans from state banks and by guaranteeing that state companies or the state itself will purchase

their products at prices acceptable to them. That is, the state can use its power to change the rules of the game under which capitalist companies can survive.

However, if the revolutionary government's aim is to begin to move toward a society without exploiters and exploited, why design a strategy to incorporate capitalist companies into the national plan, if they continue to exploit workers?

The reason is very simple: the state is not capable of running all of these companies overnight. It has neither the economic resources nor the managerial experience needed. Nevertheless, we must never lose sight of the fact that capitalist companies placed in this situation are continually going to try to reduce the burden of the aforementioned "socialist conditionality." At the same time, the revolutionary government, with the cooperation of workers and communities, will try to introduce more and more socialist features into these companies. There will be, therefore, a process of class struggle in which some will try to recover lost ground by returning to the capitalist past and others will try to continue to replace capitalist logic with a humanist, solidarity-based logic that makes it possible for all human beings to develop fully.

In general, we must strive to ensure that ownership of the means of production becomes increasingly social, while also ensuring that small-scale private property is allowed to exist.

### CREATE NEW STATE INSTITUTIONS

We have spoken about the need to work from within the inherited state apparatus, but this does not mean that we should not look for new ways to overcome it.

This was what the Bolivarian revolutionary government in Venezuela did to provide assistance to the most neglected sectors—it decided to create institutions to run programs outside of the old state apparatus. This was the objective of the different social missions created by the government: Misión Barrio Adentro,

to provide health care in poor neighborhoods; Misión Milagro, to attend to those with vision impairments; Misión Mercal, to supply food and essential products at lower prices; educational missions at various levels (literacy, primary, secondary, and higher education); Misión Cultura, to expand culture to the whole country; Misión Guaiacaipuro to attend to indigenous communities; and Misión Negra Hipólita, to provide services to the homeless and those living in extreme poverty. In the past few years, a number of new missions have been created, such as Gran Misión AgroVenezuela, which provides small and medium agricultural producers with the necessary inputs to produce; Gran Misión Vivienda Venezuela, created in April 2011 in response to the housing crisis; Gran Misión En Amor Mayor, to attend to elderly people in situations of poverty; and Gran Misión Hijos e Hijas de Venezuela, to help families in extreme poverty; Gran Misión Saber y Trabajo, which has the goal of generating three million jobs between 2011 and 2018.

Why did they have to create these missions outside of the inherited state apparatus? The example of Misión Barrio Adentro can help us understand why.

The Ministry of Health's bureaucratic apparatus was not able to respond to the health care demands of the very poor who lived in far away places or areas that are hard to get to, such as the *cerros* (poor neighborhoods located on hillsides in Caracas). The doctors working in the inherited health system didn't want to go to these places—they weren't really interested in providing health care; their aim was to make money. Additionally, they were not prepared to provide the type of health care that was needed, since they were basically educated as specialists and not as general practitioners. While a new generation of Venezuelan doctors was being educated to meet this demand, the government decided to create Misión Barrio Adentro, building medical clinics in the *cerros* and *barrios* to provide basic health care to the poorest people. The government sought the collaboration of Cuban doctors to help them in this endeavor. Whereas the poor joyfully welcomed these doctors, the opposition criticized the measure, saying they had come to take

jobs away from Venezuelan doctors and nurses. They also said the Cuban doctors were not trained professionals and made other ridiculous accusations. However, the Misión has had such positive results and an excellent reception from the Venezuelan people that the opposition is now saying in their electoral campaigns that it will keep the missions but will make them much more efficient.

In the case of Ecuador, Misión Manuela Espejo was created to attend to people with disabilities and was placed under the supervision of Vice President Lenín Moreno. The tremendous work of this mission has been recognized at the international level, and various governments have asked Ecuador to provide advice on how to carry out similar projects in their respective countries. The Ecuadorian government recently decided to create a secretariat dedicated to providing attention to people with disabilities.

## TRANSFORMING THE CENTRAL GOVERNMENT'S MANAGEMENT

### *Itinerant Cabinets: Bringing the Government Closer to the People*

On beginning his first term as president, Correa decided to break out of the traditional bureaucratic mold whereby all decisions are made within the confines of four walls, and created the so-called *gabinetes itinerantes* (itinerant cabinets).<sup>82</sup> Every three weeks, meetings are held in different municipalities and parishes, far removed from traditional centers of power, involving the entire cabinet, representatives from national and local government institutions, and local parliamentarians who belong to Alianza PAIS. Small towns are prioritized over large cities. This was part of a proposal for bringing the government to the people.

The cabinet meeting begins on Friday morning, with the starting time dependant on how far away the place is. Regional and national problems are analyzed. In general, there is no break for lunch or to eat, although sometimes a break is allowed so that government functionaries can lunch at a local restaurant and have direct contact

with people from the community. Ministers, secretaries, and directors of state institutions work throughout the day. Speeches given by each one of them are projected on a large screen and on smaller screens in front of the table they all sit around.

On Friday night, around 8:30, and once the cabinet meeting has finished, a cultural activity is held in the local stadium, where the people get a chance to interact directly with the president and his government team. There is generally a big turnout from the local population. The president says a few words and presents his cabinet, an event that allows him to get a sense of how the people feel about some of his closest collaborators. Afterward, some of the ministers play musical instruments and on many occasions end up dancing with the locals. More than a formal event, it is a “moment for communicating with the people.”<sup>83</sup> The event tends to finish up in the early morning.

On Saturday at 8:30 a.m. on the dot, Correa and his government team meet up with local mayors. Each mayor is given three minutes to put forward his or her demands. The name of the mayor, the municipal council he or she is from, and the demands or issues they want to talk about are broadcast on a screen. A digital clock on the screen indicates how much time they have left to speak. Following their speech, there is time for discussion with the president and his ministers. Opposition mayors receive the same treatment as supporters of the government. All agreements are registered in a computerized system. Correa is always careful not to make any promise that cannot be kept.

That same Saturday, after listening to the mayors’ speeches, and while Correa hosts his weekly radio and television program *Enlace Semanal*, ministers and heads of state institutions hold meetings with local citizens in a public school. Working groups are set up and presided over by the coordinating minister for each of the seven areas that ministries and secretariats are grouped into. All citizens can choose to participate in one of the working groups, putting forward their problems or suggestions. The ministers are open to receiving criticisms on how to improve their work.

Agreements reached with the different ministers are registered on a computerized system that the president has access to, with the aim of making sure promises are followed through. If there is anything that Correa strongly rejects, it is broken promises that undermine the credibility of the government.

Foreign minister Ricardo Patiño says these types of activities are enormously important, because if ministers simply stay inside their offices and make decisions from there, they will never be able to carry out what the people really want.<sup>84</sup>

### *Creating Spaces Where Officials Can Be Held to Account*

President Correa insists a lot on the issue of public accountability of government officials. This is something that distinguishes his government from previous ones. It is also why he started up a weekly radio-television program, broadcast every Saturday. *Enlace Semanal* lasts for two or three hours, starting at 10 a.m. He always hosts it at different locations.

The program has three parts. In the first, Correa informs his audience of what he did each day of the week, hour by hour, in a pedagogical manner, explaining different topics. At the same time, he criticizes government institutions for errors or deficiencies that have occurred. According to Foreign Minister Ricardo Patiño, this is why “people respect him so much, because they know he does not pretend, hide or cover things up.”<sup>85</sup> He makes public calls and brings matters of public concern to the attention of his ministers.

Following this, the show moves on to the second part, dealing with important issues that have arisen during the week. Correa usually takes up three or four issues of political interest and comments on international affairs.

The third part is dedicated to critically analyzing the messages sent out by the opposition media. This section, which lasts fifteen to twenty minutes, is called “Freedom of Expression Belongs to Everyone.” Correa will pick out a news item from one of the opposition newspapers and outline, one by one, the lies

contained in the article. He does the same with television news items.

On some occasions, the president will ask one or a few ministers or functionaries present to give details regarding some policy that has been recently implemented by their respective institution. On average, some 200 to 1,000 people, depending on the location and size of the venue, will attend the broadcast of the program, which is open to the public.

### *Carrying Out Pedagogical Work from Government*

Another task that our governments must take on is utilizing the media outlets at their disposal to educate the people and raise their consciousness.

I referred above to Correa's radio program and its educational content. However, it was Hugo Chávez who first had the idea of making direct contact with the people via the media.

Chávez always concerned himself with providing ideological education for the people. On May 23, 1999, just three months after being sworn in as president, he inaugurated his Sunday radio program *Aló Presidente* as a means for direct communication with the people, who were able to call in and ask questions or give their opinions. Shortly after, the program began being broadcast on various television channels across the country.

The program was a vehicle to reach the people every Sunday for several hours. With a simple style and attuned to popular idiosyncrasies, he would patiently explain to the people the negative effects of capitalism and the benefits of socialism, using concrete examples that related to people's everyday life. On numerous occasions he used diagrams or maps to explain things. The increase in people's political consciousness was due, in no small part, to the pedagogical capacities of the president, which he used not only during his Sunday program but also in his long and frequent speeches.

Chávez also used the program to listen to the people, and through this he learned of many things that government authorities

had kept from him. He always asked people from the area where the program was being broadcast from to speak.

### *Changing Course When the People Demand It*

Another thing our governments can and should do if they are serious about building 21st century socialism is make themselves capable of changing course when the people demand it.

This is what occurred in Bolivia at the end of 2010, when Morales backtracked on his government's decision to remove subsidies on gas, a move that had the effect of sending prices skyrocketing (on average by 83 percent).

Although the measure had a rational justification (while the government was spending \$380 million on fuel subsidies, around \$150 million of this money was leaving the country via contraband to neighboring countries such as Brazil, Peru, Argentina, Chile, and Paraguay), it was taken without consultation. The following day, violent protests took place, and threats of further marches and strikes began to be heard. This popular reaction forced the president to rethink the move, and he decided in the end to repeal the decree in line with his attitude of "governing by obeying."

"The people did not come out in opposition to Evo, rather they mobilized to say no to any attempt to govern without consultation, to demand rectification and recognition," argues Isabel Rauber. In an act of humility, revealing both his great wisdom and his roots, Evo Morales changed course by withdrawing the decree and reiterating his decision to "govern by obeying," which, in strict terms, is not a question of either governing or obeying, but rather governing together, working jointly on key measures, and sharing responsibility for decisions made and their implementation.<sup>86</sup>

According to the Argentine investigation, this popular reaction, known as the "gasolinazo," converted itself into a kind of "political earthquake . . . which was capable of reversing the growing tendency within the government to make decisions from on high without taking those below into consideration, adopting the

old political culture of power that believes governing to be the task of those who supposedly ‘know and are right,’ that it is something for those that know better, or that are ‘tough’ enough to put up with it.”<sup>87</sup>

### TRANSFORMING PARLIAMENT AND CREATING FORUMS FOR NATIONAL DEBATE

The government is not only capable of creating new institutions more suited to the new tasks; it is also capable, up to a point, of transforming parts of the inherited state apparatus, such as parliament.

#### *A New Form of Legislating: Social Parliamentarianism of the Streets*

In Venezuela, they have experimented with a new conception of participation with regard to drafting laws. They have called this initiative “social parliamentarianism of the streets.”

To carry out this initiative, it was necessary to redefine the role of parliamentarians, ensuring that they did not see their job as merely confined to the National Assembly and instead went out to make direct contact with the people, calling on voters to debate proposed laws. Pedro Sassone, an advisor to the National Assembly, recognized that this was not easy, as it would require a rupture with the prevailing culture.<sup>88</sup> Rather than discuss laws from a narrow corporatist vision by, for example, speaking to the private sector about economic laws, or discussing a housing law with experts in the field, attempts were made to create spaces where people could come together to discuss proposed laws and have their opinions and suggestions taken into consideration.

Sassone believes this should not be limited to discussing laws that have already been drafted, but should also focus on creating spaces for popular participation where people’s suggestions

on certain issues can be taken as the basis for drafting new laws from scratch. In this regard, he told us about one of the best experiences he witnessed, which occurred in Plaza Altamira, a place that has always been a gathering point in Caracas for the opposition. The meeting was called to discuss the issue of crime, one of the most deeply felt problems for many people. "We met with sections of the opposition, and reached an agreement with the [opposition-controlled] Chacao mayoral office to hold various social parliamentarianism of the streets meetings on this issue. They placed as a prerequisite that they also have the opportunity to participate in the debate, something which we agreed to. The mayor of Chacao came to our center and we went to Altamira to debate a national proposal for fighting crime."<sup>89</sup>

There is no doubt that if this legislative initiative is applied well, it could signify a real revolution in terms of drafting laws.

There is also a need to push forward with a proposal that Jesús Rojas, a Venezuelan sociologist and one of the main promoters of communal councils, was extremely passionate about: the establishment of local parliaments composed of popular spokespeople. The idea is that in the future, municipal councils will be made up of popular spokespeople elected by communal councils and other expressions of popular power, such as workers' councils, councils of shopkeepers, artisans' councils, communes, etc.

In El Salvador, there have not been big advances in this direction, but it should be noted that the parliamentarians from the Frente Farabundo Martí para la Liberación Nacional (Farabundo Martí National Liberation Front, FMLN) have implemented an interesting practice: they meet periodically with their constituents in a public place to report back on their activities and receive suggestions from the people.

### *Networks of Direct National Democracy*

Bolivian political analyst Luis Tapia has an interesting proposal that in various ways coincides with Sassone's ideas, and can

further enhance people's political participation and deepening democracy.

According to Tapia, "Participation in political life has as a first strong connotation, being present in public political spaces to debate issues of general interest, with the aim of discussing the direction that the government should take from the viewpoint of the collective we belong to, be it at the local, regional and national level.... In this sense, our first task is to consider what kind of spaces for participation we need before we start thinking about types of representation."<sup>90</sup>

Historically, in Bolivia, there have existed two main spaces and forms of political participation: "One of these is the communitarian space, that is, communities where certain types of self-government exist, which on many occasions come into conflict with the Bolivian state. The other space is civil society, which is composed of different organizations within society that generally reflect corporative interests."<sup>91</sup>

Luis Tapia has proposed an interesting idea: a "network of local assemblies of national direct democracy."<sup>92</sup> This would entail "creating political spaces for direct participation, not only in regard to local and municipal issues, but also national and plurinational issues." He believes that people who were born or choose to live in places distant from the capital should not be limited to discussing local issues; they should participate in discussions on national issues.

This would require organizing local spaces for direct democracy with the aim of discussing national issues. The national government would create these spaces in every part of the country, allowing people to discuss both local and national issues.

Luis Tapia believes that another complementary idea, one very similar to social parliamentarianism of the streets, could be to "consider making the agenda of parliamentary debates . . . public, so that once it is drawn up, it too can be the object of discussion in each of these assemblies, something which in turn would nourish the discussions both in parliament and those taking place in other assemblies at the national level with suggestions."<sup>93</sup>

“These ‘national democracy local assemblies,’” as Tapia calls them, “would be the space in which citizens could exercise, in a permanent manner, their right to participate in governing the country.”

To make this idea a reality, the government would have to formulate a plan for discussing the key issues on the country’s political agenda and establish a timeline within which local assemblies could participate in the discussion before any policies are implemented.

According to Tapia, this collection of democratic spaces for direct democracy should have direct representation in the multicultural national parliament and the executive branch of the state:

In this regards, a key feature of the proposal is that this network of assemblies for national and multicultural democracy be the principal form of political decentralization, within which citizens participate in local discussions about national issues on a regular basis and via a range of institutions that allow for communication and interchange between both levels. In this sense, the main form political decentralization would take is the organization of political spaces within which national politics can be carried out at the local level.

The size of the assemblies might correspond with that of neighborhoods in the case of cities, or alternatively, to tasks covered by municipal councils, even if it is not a municipal issue. In any case, the possibility would have to be left open for the people themselves to designate the boundaries of these political spaces.

The idea is to avoid this level becoming bureaucratized. It is essential to ensure that the infrastructure and a core group exists to make sure these assemblies function every month, and that the assembly itself elects, on a rotational basis, representatives to take all the decisions made in the assemblies to the national level, that is, directly to the Bolivian parliament.

This implies avoiding the “professionalization” of politics at this local level. While delegates may receive some funds, this would not be in the form of a salary, and would be paid purely to cover costs incurred, for instance when traveling to and from meetings and even the national parliament.<sup>94</sup>

The use of public spaces for debate is becoming common in the global movement against neoliberalism. We have the example of the 15M movement in Madrid and the Chilean student movement, which have used public spaces for debates and have transformed themselves into a mass process of popular self-education.

Finally, alongside the system of collective construction of opinions and policies, where those most committed tend to participate, we should not rule out the use of mechanisms for carrying out popular, nationwide consultations, as have already occurred in some Latin American countries. However, we must be clear that these mechanisms for consultation are based on individual acts and lack the richness of collective discussions, which is why they should be seen as complementary instruments, and not as substitutes for collective discussions.

### **PUSHING FOR THE CONSTRUCTION OF A NEW STATE FROM BELOW**

Previously, we discussed that 21st century socialism required the construction of a new state from below, pointing to the emphasis that Chávez initially placed on the communal councils as the smallest organ of societal self-government. Later, it was decided that the ideal size in which to develop self-government was a geographical space smaller than a municipality but larger than the area of a communal council, a space that to some degree is economically self-sustaining, and to whose government certain functions and services, previously carried out by municipalities, could be transferred. The functions and services to be transferred

included, among other things, the upkeep of electricity service, street and road upkeep, tax collection, rubbish disposal, and upkeep of educational and health installations. Chávez called this space the commune.

Inspired by his numerous public interventions and looking back at historical experiences of communes, I have come to formulate some ideas on this issue that are contained in the book, *De los consejos comunales a las comunas*. Below, I summarize some of these.

### *A Territory That Brings Together Several Communities*

The commune is a populated territory within which exists a number of communities that share common historical-cultural traditions, problems, aspirations, and economic vocations and use the same services; they have the conditions to be self-sustaining and self-governing; and are willing to come together behind a common project that has been elaborated in a participatory manner and is constantly being evaluated and adjusted for new circumstances as they emerge.

These criteria should be contemplated when defining the territorial boundaries of a commune, as this is not something that can be done simply by reference to numbers of residents, which is often the case when it comes to the electoral districts or municipal subdivisions that exist in some countries. Nor can they be determined by whether an affinity exists between certain community leaders or whether good relations exist between certain communities as opposed to others. Much less can they be defined in an arbitrary manner, decreed from above without any consultation.

### *Economic Sustainability with a Socialist Orientation*

The commune should be able to provide the necessary material and spiritual conditions for its productive development and the satisfaction of material, social, and cultural needs, as well as any other collective needs of its inhabitants. To this end, it must work

toward combining efforts behind a communal development plan that has been elaborated in a participatory manner.

The commune should ultimately become self-sustaining, that is, it should strive to generate its own funds, allowing it to depend less and less on external resources. It should carry out productive activities or provide services within its own territory that provide it with the means for obtaining a significant part of the resources it requires to meet its needs and costs.

Each commune should strive to build up a system of production, distribution, and consumption with the participation of its communities, via communitarian organizations, cooperatives, social property companies with a socialist orientation, bartering systems, and many other innovative ideas that point in the direction of this new productive model based on popular power and control over production.

Logically, a key structural axis of the commune will be those units of production or service provision that are communal or communal-state property.

In terms of a rural commune, we could combine agrarian cooperatives involved in the cultivation of certain fruit and vegetables with the purchasing of these products and industrial processing by a communal social property company. Distribution would be in socialist-oriented stores within and outside the commune.

Attempts should be made to establish communal property companies in each commune, which could employ local residents and produce goods and services that are of communal use: bakeries, transport, companies that regulate water distribution and service payment, LPG cylinder refilling plants, gas stations, etc. The commune should financially support initiatives that generate local jobs during their initial phase, until they are financially self-sufficient.

### *A Communal Government*

At the same time, we need to take steps toward communal self-government. The municipal council should gradually transfer an

important part of its governmental functions and management of public affairs to the commune. It should only conserve in its power those functions that are justifiable on the basis that they are of a more general or complex character.

- A communal parliament emerges from the assembly of popular power of the commune.

Within each commune, a communal parliament or communal legislative power should be created. This would be the decision-making body for those people—whom we could call *comuneros*—living in the commune. This parliament would be made up of spokespeople from communal councils, workers' councils, issues-based councils, or interest groups that exist within the commune's boundary and that are willing to participate in the construction of the commune. It would be the commune's assembly of popular power.

To facilitate the work of these spokespeople, I propose the creation of a legal advisory team for this parliament that could be brought together in three collegial bodies: a council of community popular power, a council of workers' popular power, and a council of issues-based or interest group popular power.

Each one of these councils of popular power will work separately on their specific issues and come together in a grand assembly of popular power to discuss common issues and collaborate on those points that require doing so.

The commune's assembly of popular power will be the highest decision-making body within its territory.

- Assemblies of popular power create their respective government organs.

The commune should be capable of taking on a series of activities that until now have been carried out by the municipal council: local taxes, street cleaning, electricity, water, local roads, and maintenance of communal places. Doing so will require an apparatus that allows it to exercise these responsibilities.

In the future, the commune's assembly of popular power should become the communal government, creating for itself the necessary apparatuses and institutions that can allow it to take on the tasks that arise as a result of being transferred greater responsibilities.

This assembly would also be responsible for electing people to occupy posts in the remaining four branches of the state recognized in the Bolivarian constitution: the executive, judicial, moral, and electoral branches. These public servants should report back on their activities and be recallable in case they are considered not to be complying with the mandate they were given.

- Communal planning council.

The commune should have a communal planning council that at the start of each governing term facilitates a participatory planning process for the elaboration of the commune's multi-annual strategic development plan and its annual plans. These plans should fit within the broader strategic national development plan and other local plans, while at the same time nourishing those plans with its own proposals and projects.

### *Communal Bank*

The commune should also have its own financial entity or communal bank in which to deposit the funds it administers. There could also be other financing initiatives, such as rural banks, savings and loan cooperatives, and savings banks.

The national state should establish a fund to help kick-start the creation of communes, based on the principle of equity and solidarity. Those communes with the most needs and historically least attended to by the state should receive more funds than the rest.

While the communal bank is being established, communal councils that belong to a single commune can pool their funds

into a single project, with each council taking on its financial share of the project. Alternatively, one of the already constituted communal council banks could be chosen to receive funds from a state institution willing to support one of the commune's projects. The disposition of communal councils to share their resources with other communal councils in the commune is a good indication as to whether the subjective conditions are being created to move in the direction of communal self-government.

### *Social Control over the Government*

Efficient social control should exist over the functioning of the government, with different means and mechanisms available for citizens to speak out about the quality of services and the power to remove those functionaries whose performance has been questioned by a sufficient number of local residents.

### *Communes Cannot Be Decried from Above*

It is not up to the local governor or mayor to decide, without any prior research, when and where a commune should be created. It is not a question of seeing who has more communes in their region. Communes should not be created in an artificial manner simply to satisfy the desires of those higher up or in order to obtain resources from the state. The process of creating the necessary subjective conditions in these territories cannot be forced. Governorships and mayoralties should be facilitators of this process and not take over responsibility for things the people have to do themselves. They should provide technical assistance to aid the communes in their creation, with their handling and distribution of money, and in other areas in which they may need help.

*Experimenting with a Different Way of Managing  
the State Apparatus*

The experience of the communes should provide an opportunity to experiment with a different way of managing the state apparatus, putting it at the service of the people. Within the commune, state institutions should work in a harmonious manner, with the aim of meeting the needs of the respective commune. This requires, on the one hand, working together among themselves, and on the other, meeting with community spokespeople to ensure they are operating within the framework of the communal plan.

The actions of state institutions should be subject to some kind of communal social control, and if a state functionary is found not to be up to the task in terms of his or her respective responsibilities, there should be a commitment on the part of each local or national institution that such a functionary be removed from their post.

The process of building communes implies laying down the foundation of a new state, one that will no longer stand above the people, but rather be a state composed of the organized people who have taken their destiny into their own hands.

*Coexistence of Two Types of State in the Period of Transition*

It is necessary to understand—as Michael Lebowitz writes—that two states will coexist for a long time in the transition process: the inherited old state whose administrative functions have been taken over by revolutionary cadres that will try to use it to push through the process of changes and a state that begins to emerge from below through the exercise of popular power in various institutions, including the communal councils.<sup>95</sup>

### *Relationship of Complementarity*

The uniqueness of the transition process is that the inherited state fosters the emergence of the state that will replace it, and thus a complementary relationship should be developed rather than one where one of the states negates the other. Of course, the assumption is that the organized movement must control and exert pressure on the inherited state to ensure that it moves forward. This is because it suffers from tremendous inertia and because the cadres that occupy leadership positions are not always imbued with a truly revolutionary spirit and so tend to slip into the same behavior patterns as officials of the past.

### *The Inherited Culture*

It cannot be ignored that the seeds of popular power that spring up from below might be contaminated by the inherited culture and that they might deviate into bureaucratism or other things. As Gramsci says, and President Chávez never tired of repeating, a struggle exists between the old that cannot finish dying and the new that is being born.

### *Local Vision, Global Vision*

One of the characteristics of the state that emerges from below is its tendency to have a “local view” of reality, seeing the trees but not the forest: a kind of local *esprit de corps* exists which, as with trade unions, that tends to focus on making economic demands on the company and loses its vision of the working class as a whole.

The inherited state, however, because of its national character, necessarily tends to have a “global view” of things. It should have a plan for the overall development of the country, designed with as much participation by the people as possible; a plan that allows it to push forward its project for economic, political, educational, and cultural transformation toward the society we want to build,

a society that makes possible the full development of all humans, which is in solidarity with the poorest areas and which will lead to balanced national development.

### TRANSFORMING THE ARMED FORCES TO IDENTIFY WITH THEIR PEOPLE

One of the most important tasks facing our governments is that of transforming the military. However, is it possible for a body that has been part of the repressive, disciplinary apparatus of the bourgeois state, which has been impregnated with bourgeois ideology and whose high commands have been trained by the U.S. School of the Americas and indoctrinated in its national security doctrine, to transform itself into an institution at the service of the people and increasingly identified with the people?

Historical experience in the past few decades in Latin America allows us to think that this can happen. In the years following Hugo Chávez's election, the armed forces played an important role in defending the decisions democratically made by the Venezuelan people. It was the armed forces who were mainly responsible for Chávez's return to power when a group of top officers, most of whom commanded no troops, sadly played the role of pawns of big business interests in a frustrated April 2002 coup attempt.<sup>96</sup>

Transforming the military is no easy task, given that in most of our countries this has been a repressive institution at the service of the established order. What order are we talking about? Well, the order that has allowed capital to reproduce itself and is enshrined in the inherited constitution. Every time the popular movement, through various forms of struggle, has threatened the reproduction of the capitalist system, every time that its interests have been even slightly affected or an attempt has been made to reduce the privileges of the groups that have ruled up to that point, the armed forces have been called upon to impose order, that is to say, to keep bourgeois order, to defend the inherited system of institutions. It is symptomatic that

in Bolivia “the armed forces had—and still do to some extent—concentrated their soldiers around the mines in the rebellious Altiplano and the Chapare, that is to say in the rebellious zones of the city and the country. Their logic was social containment.”<sup>97</sup>

Today, however, an increasingly large number of left governments in our continent have understood the importance of changing this order, of creating new rules for the institutional game that can serve as a framework for making it easier to build the new society. For this reason, they have organized or are organizing constituent assemblies to draft new constitutions that will install a new way of organizing society and establish a social order that will serve the majority of the population and not the elites. These constitutions will ensure that the natural wealth of these countries, which was ceded to transnational companies, returns to state hands and will ensure the construction of independent and sovereign states. The military, by defending this new order, will thus be defending the homeland and the interests of the overwhelming majority of the population, not the interests of the elites.

That is what happened in Venezuela. The first gesture made by the newly elected government was to organize a constituent process to change the rule of the inherited game and to re-found the state by creating a new set of institutions better suited to the changes people wanted to make. The Constituent Assembly led to a new constitution. The new constitution became an important ally of the process, because defending the constitution means nothing if not defending the changes undertaken by the Chávez government. It was this constitution that allowed the majority of high-ranking officers—under pressure from the people—to rebel against the coup-supporting officers and decide to disobey the orders of their superiors. Many young officers and soldiers used this same constitution to organize the resistance from below by putting pressure on their officers to reject the coup.

How can our governments begin the process of transforming the armed forces into an institution willing to defend and implement the new institutional order in a consistent way?

Our governments have been implementing various measures. Let us examine some of them.

*Give the Military Responsibility for Social Projects to Help  
the Most Destitute*

One important means is assigning social projects to the armed forces so that they use their labor power, their technical knowledge, and their organizational abilities to help the most destitute social sectors. The most obvious example of this was the Plan Bolívar 2000, which President Chávez instigated in Venezuela when he began his mandate. It was a program designed to improve the living conditions of the popular sectors. The military cleaned the streets and schools, cleaned the neighborhoods to fight against endemic diseases, and helped restore social infrastructure in urban and rural zones. Venezuelan soldiers accepted this work with a great deal of enthusiasm, and direct contact with the social problems that the poorest sectors of the population were experiencing helped to raise the consciousness and social commitment of the young officers who worked in the program. These young soldiers are today among the most radicalized sectors of the process.

In Bolivia, the military has been given the job of providing the most destitute sectors with economic aid such as the Juancito Pinto bonus, provided to help with the schooling of children from the lowest-income families, and the Juana Azurduy bonus for single pregnant mothers.

*Provide Educational Schools and Courses in the Spirit  
of the Constitution*

It is important that top military officers and those under their command have a vision of the world that is consistent with the new society we want to build.

It is interesting to note that in Hugo Chávez's generation, most officers were not educated in the School of the Americas but in

the Venezuelan Military Academy, which had undergone far-reaching changes in 1971. What was known as the Andrés Bello Plan raised the level to university equivalent. Army cadets began to study political science to learn about democracy theorists and analysts of Venezuelan conditions. For military strategy, they studied Clausewitz, Asian strategists, and Mao Zedong. Many of these soldiers ended up specializing in certain subjects in universities and began to interact with other university students. If any did go off to study in the U.S. academy, they went with their rucksacks filled with progressive ideas.

*Give the Armed Forces Responsibility for Big Infrastructure Projects*

Our armies and our peoples, even though they desperately wish to live in peace, must be prepared to defend our national sovereignty as long as imperial forces want to dominate the world and impose their vision.

It is worthwhile remembering that in the beginning, the Cuban Revolution wanted to turn barracks into schools but needed to change its plans and spend huge sums of money on strengthening its military might to prevent U.S. intervention. Faced with an unreasonable enemy, there is no option but to prepare for war as the best way to avoid it.

However, in countries like ours, which have so many development needs, it makes no sense for our armies to train only for war and then just sit around and wait for an invasion. Some of the soldiers can be used for strategic economic tasks.

It is important for the armed forces to feel they are not simply defenders of order and national security, but that they also consider themselves to be builders of the new society. Much of the knowledge they acquire to defend the homeland can be used to repair infrastructure that has fallen into disrepair for lack of maintenance (hospitals and public schools) or to collaborate in managing new strategic companies or undertake work that, for example, improves communication throughout the country.

By employing members of the military in economic tasks, Cuba has achieved excellent results. Companies run by the army have, on the whole, achieved better results than other state companies.

*Democratize Access to the Top Ranks and Change  
Selection Criteria*

It is also important that all discrimination impeding access to the highest ranks in the military is eliminated. In Venezuela, this was much easier because, unlike in most other countries, no military caste existed. Most high-ranking officers came from low-income families, both rural and urban, and knew firsthand the difficulties Venezuelan people had to deal with in their daily lives.

In Bolivia, as in most of our countries, an officer who trained in the United States used to have more chance of being promoted, but things now operate in the opposite direction: whoever shows the greatest nationalist sentiment, the greatest commitment to institutions, the greatest support for social and productive tasks has the best chance of being promoted in the armed forces.

*Include the People in National Defense Work*

Our nations must be prepared to defend themselves from any foreign interference. It is obvious that because of numerical and technological imbalances, our armies would not be able to resist an imperial invasion, unless our people join on a mass scale with military personnel in the task of defending our sovereignty. As Álvaro García Linera, vice president of Bolivia, says, the only option for surviving or resisting if faced with a possible invasion is if there are “strong links between the military and social structures. In Bolivia they are rediscovering a tradition of struggle from the past: something that was called *las republiquetas* [the little republics]. These arose to fight against Spain during the struggle for independence. In these *republiquetas* the military was merged into the local community structure. That was how they stood firm and developed

during the fifteen years of the battle for independence and were able to build the Bolivian state. This is the logic being used by members of the military themselves to create Bolivian military doctrine.<sup>98</sup>

To defend the sovereignty of Cuba, a country that is only ninety miles from the United States, it was of fundamental importance to have, side-by-side with the standing army, people's militias trained to defend the homeland in the event of an external threat. In Venezuela, progress is being made in this area.

History has shown that, confronted by the elevated combative morale of our peoples rising up in arms, there is no empire that can be victorious.

Moreover, the decision to form the Defense Council of UNASUR has been another important step forward in the defense of our sovereignty as a subcontinent.

### *Recover Patriotic Symbols and Traditions*

Another of the efforts that our governments have made is to restore traditions and values by modifying national symbols to better fit with the characteristics of each national reality. The most recent example of this is the decision by the armed forces of the plurinational Bolivian state to use the indigenous symbol of the Whipala as one of its flags.

### *Build Territorial Sovereignty in Regions Previously Neglected*

There are countries in our continent that have not yet gained complete sovereignty over their territory. This is the case in Bolivia. Until a very short while ago, the state did not control about 30 percent of its national territory. In the eastern strip, from Beni to Santa Cruz, power was in the hands of landowners, drug traffickers, wood smugglers, and illegal raw material and mineral dealers. There was no state there; the strongest ruled—the drug trafficker's thug or the landowner's thug. "Now we are getting this

territory back as never before in our history. The state's presence in this area has multiplied by 2,000," says the Bolivian vice president. "Previously a visit to Pando was a once-a-year visit for the president, now not a week goes by without a minister visiting. We have managed to assert the state's presence in all of these territories in the country. Now there is a permanent state presence with its armed forces, bringing resources, bringing health care, bringing education."<sup>99</sup>

### A MODEL OF DEVELOPMENT THAT RESPECTS NATURE

Another important task our governments face is implementing an economic development model that is not based on the indiscriminate exploitation of natural resources, but instead seeks to gradually reestablish the necessary harmonic metabolism between humans and nature.

There exists a consensus among Latin American progressive governments that the growth rates experienced by advanced countries in the second half of the twentieth century cannot be maintained or imitated by other countries. This would "have irreversible and catastrophic consequences for the natural environment of this planet, including to the human species."<sup>100</sup> No one doubts that putting an end to this situation has become more and more urgent if we want humanity to have a future. Nevertheless, we all know that the solution won't come from advanced, developed countries, which are at the same time the most polluting nations. The 2012 Rio+20 Summit is further proof of that.

This is why the more advanced governments in our region should lead by example, not simply because this is a question of principles—that there will be no socialism if we do not respect nature—but because the survival of humanity demands it.

Venezuela, Bolivia, and Ecuador should implement their respective constitution's mandate and respect the environment. The new constitutions passed in these three countries place

emphasis on this issue. In fact, the Ecuadorian constitution is the first constitution in the world to recognize the rights of nature.<sup>101</sup>

This is a far from easy task. The big dilemma these countries have in front of them is how to raise their people out of poverty and attend to their basic needs, while respecting nature. To aim for some kind of “zero growth,” as some propose, to avoid the consumption of polluting energy and its degrading consequences for the environment, would mean enshrining existing inequalities between rich and poor countries, that is, between developed societies that have reached a high standard of living and the majority of humanity that are a long way from reaching those conditions. It is much easier to ask others to stop growing if one’s own needs are already satisfied.

### *Transform Natural Resources from a Curse into a Blessing*

We have to confront the challenge of finding a strategy that allows us to build the good life (*buen vivir*), taking advantage of nonrenewable natural resources and transforming them into “a blessing,” as Nobel Prize winner Joseph Stiglitz has recommended, but without depending exaggeratedly on them. Only in this way will we be able to leave the trap of poverty and underdevelopment.<sup>102</sup>

As President Correa says, the great challenge we face is to utilize extractivism in order to overcome extractivism. Personally, I believe that the phrase extractivism, like many “isms” in Spanish, has negative connotations and prefer to talk of the need to use resource extraction to overcome extractivism.

Our governments, therefore, need to take steps in the direction of ensuring that the development of our countries depends less and less on extractivism.

The dilemma is not between extracting and not extracting, but rather extracting at rates that maintain a healthy metabolism between humans and nature. This cannot be achieved from one day to the next.

María Fernanda Espinosa, a longtime environmental activist and Ecuador's defense minister, assures us that her government is making an effort to transition from an extractive economy to a service-based economy, but she adds: "This cannot be done by decree, that is, the oil pipelines cannot [be shut off] from one day to the next. . . . So the issue is: how do we, within the realm of the possible, from the government, carry out this transition from a highly oil-dependent extractive economy to a post-oil economy? How can we do this in an organized, planned, and responsible manner?"<sup>103</sup>

Even Alberto Acosta, an Ecuadorian economist who is very critical of extractivism, has made clear that one cannot think of "closing the oil fields currently being exploited, but we must seriously discuss whether it is useful to continue expanding to new oilfields" given the environmentally devastating impacts this would entail.<sup>104</sup>

### *Approaches Toward an Ecologically Sustainable Society*

The environmentalist and American economist Herman E. Daly has established three basic operative criteria that should be applied by an ecologically sustainable society: "1) not to exploit renewable resources at a rate over and above that at which they renovate; 2) do not exploit nonrenewable resources at a rate over and above that at which they can be substituted by renewable resources; 3) do not emit into the air, water and soil an amount or composition of residues over and above the capacity of ecosystems to absorb them."<sup>105</sup> We should add a fourth criterion: respect the biological diversity or biodiversity of different ecosystems.

It is not, then, about saying no to development, but instead "conceiving and making reality genuinely human models of development," or what several authors call "sustainable development" or "ecologically sustainable society." That is, a society that satisfies "in an equal way the necessities of their inhabitants without putting in danger the satisfaction of the necessities of the future generations,"

a society in which it is the organized people who decide what is produced and how it is produced.<sup>106</sup>

### *Steps Being Taken*

Creating such a society is the direction that our governments should be heading towards, and important steps have been taken in this regard, even if in many cases they have remained at the level of discourse for now. This at least demonstrates an intention to move in this direction.

The fact that this issue has received a lot of attention in the new constitutions is a very important step forward. In all cases, the state is tasked with the responsibility of protecting the environment.

To achieve this, it will be necessary to transition (within a certain timeframe) from a primarily exporting economy to an economy based on services and knowledge, something the Ecuadorian government has embarked upon.

According to the Peruvian scholar and politician Manuel Lajo, the Ecuadorian government “has put an enormous effort into cohering a strategy for the construction of a chain of scientific and technological investigation centers, both public and private, national and international,” with the aim of identifying those economic sectors that can, via the intensive use of scientific knowledge and technological innovations, produce for the internal market or for exportation and help achieve this urgently needed change in the productive model.<sup>107</sup>

President Rafael Correa, more than any other Latin American president, has placed emphasis on the role that education must play in training up the future generation of citizens capable of building the future society.

I do not have the space here to detail everything that the government has done in the area of education. Instead, I will simply refer to the government’s flagship project, the City of Knowledge, which Daniel Suárez, advisor to the National Secretariat for Higher Education, Science, Technology, and Innovation, describes as “the

key project being implemented as part of creating the new knowledge-based Ecuador.”<sup>108</sup>

The University of Yachay will be the hub of the city and the first public academic center for higher studies in Ecuador and Latin America. It will focus exclusively on providing courses in science and technology in order to resolve social needs and train creative and innovative professionals.

There will also be eleven public research institutions that will become regional and continental leaders in their respective areas, dedicating their research toward meeting the basic needs of society. Among the areas of research will be development of technologies for increasing production and the generation of safe products for internal consumption and exportation; development of technologies for the industrialization of nonrenewable natural resources (petrochemical and metallurgical); research into alternative materials for low-energy-use housing; research on adapting technologies for efficient, low-energy, and environmentally friendly transport; and research into ways to protect the environment through recycling, waste treatment, and the cleanup of contaminated sites, to name just those that I consider to be the most illustrative of this new research focus.

Another step that our governments can take is to begin the process of restoring ecological systems that have been degraded, damaged, or destroyed. Part of the resources obtained through greater state control over oil extraction in Ecuador has been dedicated to water treatment, for example, which has benefited tens of thousands of families, especially those in the poorest areas.

They are also transforming their energy matrix by reducing dependency on oil and its derivatives. Huge investment is going into hydroelectricity and wind energy.

Steps are also being taken to mitigate the negative environmental consequences of oil extraction through the promotion of prevention and control measures so that the process is no longer as highly contaminating as it was in the 1970s, when Texaco was operating in the country. To achieve this, the government is

using revenue it collects from oil extraction to invest in high-level technology.

Among the various precautionary measures and restrictions that have been placed on activities that could lead to the extinction of certain species, the destruction of ecosystems, or the permanent alteration of natural cycles, the government has worked toward restoring and conserving mangrove regions, whose management has been placed in the hands of local communities.

The most important initiative in this regard has been the government's effort to reduce oil exploitation. In 2007, Correa presented to the world an interesting and challenging project, known as Yasuni-ITT.<sup>109</sup> As part of this project, Ecuador would agree to leave under the ground roughly 20 percent of its proven oil reserves, which is located in three oil fields within the Yasuni National Park, in exchange for the international community donating at least \$3.6 billion to the project, roughly equivalent to 50 percent of the income Ecuador would receive if it opted to exploit the oil fields. Nevertheless, Correa maintained that if the international community were not willing to contribute to the Yasuni-ITT project, Ecuador would have no alternative but to exploit those oil fields.

### *Popular Participation in the Defense of the Environment*

Given that the challenge is huge and temptations abound, I believe the constitutions of Ecuador and Bolivia propose some very interesting points regarding the role popular participation should play in the protection of the environment. The Ecuadorian constitution says: "The state guarantees the active and permanent participation of people, communities, affected nationalities and peoples, in the planning, implementation and control of all activities that generate environmental impacts."

Article 135 of the Bolivian constitution proposes something similar, but adds that the organized people can and should react via what the constitution calls "popular action" to any violation or

threat against a series of rights, including among them those of the environment.

Moreover, the constitution (Articles 187-190) allows for the creation of a tribunal dedicated exclusively to agro-environmental issues. Authorities to this tribunal were elected by the people in unprecedented elections held in October 2011 for the entire judicial system.

Finally, also in Bolivia, on December 21, 2010, the new Law Number 71 dedicated to the rights of Mother Earth came into being, with the purpose of recognizing nature's rights, as well as the obligations and responsibilities of the plurinational state and society in guaranteeing them.

Given everything I have said up till now, I believe that the objectives set out by the aforementioned governments clearly show us a path forward, even if some internal contradictions may exist in the constitutions. Nevertheless, we should recognize that there is still a big gap between theoretical discourse and the practical steps forward being taken by these governments, although I have no doubt that the political will exists to continue pushing toward the goal of *buen vivir*, based on harmony between humans and nature and one of the characteristics of the alternative to capitalism we need to build.

It is equally clear that by using extractive resources to tackle poverty, we are also creating better environmental conditions, because in many cases, poverty is a big contributing factor to environmental degradation. Illegal logging for firewood to use in cooking and to keep warm is one of the clearest examples of this.

### **PROMOTING DECENTRALIZATION AND PARTICIPATORY REGIONAL PLANNING: THE EXAMPLE OF KERALA**

Some Latin American nations have put into practice a variety of participatory budget processes, but I know of no experiences like that in Kerala, India, where a massive program of participatory

planning was carried out, demonstrating to the world that a Left government can take significant steps in this direction.<sup>110</sup> Using the legal backing of the 1993 constitution, which established three levels of local entities (districts, blocks, and rural villages), the communist government elected in 1996 began a notable and radical experiment in democratic participation, known as the People's Campaign for Decentralized Planning. This program entailed a fundamental change in the role different levels of government played and the emergence of what some people have called local self-governments.

*Decentralize All That You Can Decentralize*

One of the first decisions made by the new Kerala government was to transfer 35–40 percent of the funds it received from the National Plan toward projects and programs proposed by local entities. In doing so, the government helped stimulate popular participation as people became interested in participating because they saw they had the power to make decisions on concrete and important issues.

During the campaign, they applied the principle of “subsidiarity.” That is, anything that an entity at a lower, more local level could do should be done at that level, and only those tasks that needed the intervention of higher levels of administration should be delegated upward.

Given that support for the opposition was close to 40 percent and the government wanted to avoid a scenario in which these sectors could boycott the process, representatives of the opposition were invited to participate both on the high-level national commission as well as in the local commissions. Their opinions were sought when creating a commission with vast powers to investigate any corruption that local governments might get involved in during the exercising of their functions.

### *Community Assemblies: Mass Bases for Planning*

Participatory planning involves the realization of community assemblies (*grama sabhas*) at the level of electoral districts in Kerala, which contain around 1,500 to 2,000 people of voting age, in order to identify what are the most deeply felt needs and problems of the people, and what human and material resources exist in the local area. Once problems and resources have been analyzed, proposals are formulated. I think it is fundamental that they do not simply remain at the level of pointing out problems.

Great importance was attributed to the effective function of the community assemblies as a central component in the creation of a mass base for local planning and assuring transparency in the elaboration and implementation of plans.

Each one of these assemblies elects twenty people to represent it at the level of the rural village or urban municipality, creating what is known as the Council.

More than 1,000 entities were involved in the participatory planning process.

### *Steps in the Participatory Planning Process*

The starting point is identifying the most deeply felt needs of the people. This is done by convening community assemblies and attempting to ensure the maximum level of participation of local residents, especially women and the most marginalized. To facilitate participation, assemblies are convened on non-workdays.

Next, steps are taken to identify not only the problems but also the human and material resources that exist in the locality. Out of this discussion emerge proposals, or what I have termed project-ideas.

Once needs and available resources have been identified, the assemblies begin to develop projects. To make this step a reality, each local entity creates working groups for each project made up of elected representatives, functionaries, experts, and activists.

Based on this set of projects, representatives select those proposals that should be included in the plan. While the lower levels prepare their plans, the higher levels begin to integrate into their plans proposals that emerge from below, evaluating them in technical terms, but without questioning the priorities set by the municipality or village.

Finally, at the district level, a team of functionaries and experts carries out a technical and financial evaluation of the different plans and projects before the District Planning Committee approves them.

These six steps normally took one year to complete and involved three million citizens, tens of thousands of functionaries and experts, numerous mass organizations and other representatives of civil society, and around 100,000 volunteers trained in providing organizational support for the campaign.

### *Corruption Diminishes Thanks to Measures Adopted*

One of the arguments advanced by the opposition against decentralizing resources to local powers was that, given the corruption at the top level of government, decentralizing resources would only shift corruption to the local level. Nevertheless, the opposite occurred: rather than increasing, corruption decreased. This was not achieved spontaneously, however; instead, a series of measures that were effective in tackling this vice were adopted. Transparency was introduced in law. All documents pertaining to the plan, including the selection of people who benefited from programs, accounts, and invoices were considered to be public documents, open and accessible to any citizen.

Whenever a public work was being carried out, a large billboard or wall was constructed, visible for all to see, with all the information relating to the project written on it in the local language. Penalties were imposed if this measure was not enacted. The infamous alliance of contractors, engineers, and politicians was definitively broken in many places.

Regular social audits of community assemblies were carried out, something that was of great help in the fight against corruption.

In consultation with opposition leaders, a seven-member committee was created and granted vast powers to investigate cases of embezzlement that local authorities may have been involved in while exercising their functions.

Monitoring committees made up of ordinary citizens were established to watch over the process of selection, implementation, and evaluation of projects.

## *10. A Guide to Judging How Much Progress Is Being Made*

Thus far I have tried to analyze the characteristics of the processes of building socialism in our subcontinent. I indicated how progress can be made with this project using government power, and said that in order to judge our governments it is more important to look at the direction in which they are going and not the speed with which they are advancing. Now I would like to propose criteria that could allow us to make an objective assessment of the progress made by those governments that have explicitly set themselves the goal of beginning to build 21st century socialism.

**Attitude to neoliberalism and capitalism in general.** What is the government's attitude toward neoliberalism and capitalism in general? Does it lay bare the logic of capital, does it attack it ideologically, and does it use the state to weaken it?

**Attitude to unequal income distribution.** Are our governments moving to diminish the gap between the richest and the poorest; are they giving the latter more access to education, health, and housing? Are they taking measures to ensure there is a fairer distribution of wealth between the poorest and richest municipalities?

**Attitude towards the institutions our governments inherit.**

Do they convene constituent processes to change the rules of the institutional game, knowing that the inherited neoliberal state apparatus places huge obstacles in the way of any progress in building a different kind of society? Does the government strive to increase the number of people registered to vote, given that generally the poor are less likely to be on the electoral rolls? Are they taking steps to transform the inherited state apparatus, the manner of governing, the parliament, the judicial system, etc.?

**Attitude toward the armed forces.** Are steps being taken to transform this institution? Have there been moves to stop training officers at the School of the Americas and end joint training exercises with U.S. armed forces? Has the military been entrusted with social tasks that put it in close contact with the people? Has its education curriculum been changed? Has a new national security doctrine been drawn up? Has the system for the promotion of military officers been changed?

**Attitude to economic and human development.** Does the government consider the goal of satisfying human needs more important than accumulating capital? Does it understand that human development cannot be achieved with a paternalistic state, one that solves problems by transforming people into beggars? Does the government realize this can only be achieved through practice and creating spaces in which popular protagonism is possible?

**Attitude to national sovereignty.** Does the government reject foreign military intervention, military bases, humiliating treaties, etc.? Is it recuperating sovereignty over natural resources? Has it made progress in finding solutions to the problem of media hegemony, which until now has been in the hands of conservative forces? Is it promoting the recuperation of national cultural traditions?

**Attitude to the role of women.** Does the government respect and encourage the protagonism of women?

**Attitude toward discrimination of all types.** Is the government making progress in eliminating discrimination of all types (sexual orientation, gender, ethnicity, religion, etc.)?

**Attitude toward the means of production and producers.** Is social ownership of the means of production increasing, and are workers more and more the protagonists in the workplace? Is the division between intellectual and manual labor disappearing? Is workers' capacity for self-management and self-government growing? Is the distance between the countryside and the city diminishing?

**Attitude to nature.** Are the governments seeking a change in the institutional rules of the game in order to promote environmental protection? Are they making an effort to transition from a largely extractivist model toward a sustainable development model? Have they implemented policies that indicate the country will depend less on extractive industries in the future? Are they dealing with the problem of industrial pollution? Are they ruling out the use of transgenic crops and livestock? Are they implementing educational campaigns to promote environmental protection? Are they encouraging and taking practical measures for recycling rubbish?

**Attitude toward the need to place the wealth of society in their own hands.** Are the governments taking steps toward a greater decentralization of governmental functions? Are they allowing for citizens' participation in designing national plans? Are they carrying out participatory planning processes at all levels of society?

**Attitude to international—especially Latin American—coordination and solidarity.** Are the governments looking for ways to

integrate with other countries in the region? Are they providing solidarity to countries in the region that need it?

**Attitude toward popular protagonism.** Do the governments mobilize workers and the people in general to carry out certain measures, and are they contributing to an increase in the people's abilities and power? Do they understand the need for an organized, politicized people, able to exercise the necessary pressure that can weaken the state apparatus and power they inherited and thus drive forward the proposed transformation process? Do they understand that our people must be protagonists and not supporting actors? Do they listen to the people and let them speak? Do they understand that they can rely on the people to fight the errors and deviations that come up along the way? Do they give the people resources and call on them to exercise social control over the process? To sum up, is the government contributing to the creation of a popular subject who is increasingly the protagonist, one who is assuming governmental responsibilities?

PART 3

---

A New Political Instrument for  
a New Hegemony

## *11. Building a New Hegemony*

Previously, I specifically focused on the issue of participatory and protagonistic democracy as the fundamental characteristics of the new society we want to build. I also took up the characteristics of the transition in those countries whose governments have decided to advance toward socialism via the peaceful or institutional road. I explored some of the steps these governments could take, pointing out the need not to look at the pace with which they proceed but rather the direction in which they are going, since the pace to a large extent depends on how the obstacles in their path are dealt with.

Now, I would like to briefly focus on how we can achieve the necessary balance of forces in order to advance toward the society we want to build and the society's relationship with the issue of hegemony.

### **DEFINING HEGEMONY**

The word *hegemony* is commonly used as a synonym for dominance and to refer to different situations. It can refer to economic hegemony, military hegemony, political hegemony, and cultural hegemony. Here, I use the term to refer to the issue of consciousness, of cultural hegemony.<sup>1</sup>

My starting point, just as it was for Marx, is that the ideas and values that prevail in a determined society, and rationalize and justify the existing order, are the ideas and values of the ruling class. While in previous times these were fundamentally transmitted via the family, the church, and the school system, today they are more and more transmitted via the media, in particular television, whose soap operas have become, as Chilean sociologist Tomás Moulián said, the modern-day opium of the masses, with a strong influence among those sectors of society that are least likely to be armed with critical ideas and thinking.

For me, a class becomes hegemonic when its values, its proposals, its societal project are accepted, looked upon sympathetically, and taken up as their own by broad sections of society. Hegemony is the opposite of imposition by force.

Moreover, we should not confuse the word *hegemony* with domination, because a class can be dominant when its interests are imposed on society by force and can also be dominant when its interests are taken up as their own by the people. Therefore, a class can dominate through terror or dominate through consensus or through a combination of both. Furthermore, hegemony is not something that is achieved once and for all; it can also be lost. It tends to occur that when governments that rule through consensus begin to lose their social base of support, they will increasingly rely on authoritarian methods to maintain their domination. It can therefore be said that there exists a dialectical relationship between the weakening of the capacity to convince and an increase in the need to use force.

When a social class becomes hegemonic, one of its achievements is that it is able to form a social bloc; that is, it can unite a heterogeneous social conglomerate that is normally marked by—in some cases profound—class contradictions. The ideas and proposals of this hegemonic social class serve as a cohering element and help mitigate existing contradiction between different social sectors.

For these proposals to convince and unite others behind them, people must feel that they will help solve their problems. There

must exist at least the illusion that measures being adopted will resolve problems, because once people realize this is not the case, hegemony begins to break down.

*Bourgeoisie Achieves Popular Approval for Capitalist Order*

In a number of countries, bourgeois sectors have been able to embed their values, generate broad acceptance for the capitalist social order, and achieve cultural leadership over society; that is, they are able to govern by consensus rather than by using force. There, propaganda tends to be well refined and is not only able to manufacture artificial necessities but also creates the illusion among important sections of the population that their problems can be resolved by implementing the existing economic model.

*Bourgeois Hegemony Begins to Break Down*

Nevertheless, the global crisis of capitalism, the incapacity of its neoliberal form to resolve the most acute problems of our peoples, the rapid rise in misery, and the social exclusion of the great majority of the population while fewer and fewer individuals hoard the majority of the wealth have led a growing number of people across the world to reject this model. This was the tipping point that in many countries in Latin America created the condition in which we elected leaders who proposed alternatives to neoliberalism, and that today is the cause of the current mobilizations and popular uprisings occurring in different parts of the world.

**THE NEED FOR A POLITICAL INSTRUMENT**

This breaking down of bourgeois hegemony does not necessarily mean that a new popular hegemony has emerged in its place. This will not occur spontaneously; we need a political instrument, a political organization to help us construct it.<sup>2</sup>

In recent years, and in increasingly more countries, growing multitudes have rebelled against the existing order and, without a defined leadership, have taken over plazas, streets, highways, towns, and parliaments. But, despite having mobilized hundreds of thousands of people, neither the magnitude of their size nor their combativeness have enabled these multitudes to go beyond simple popular revolts. They have brought down presidents, but they have not been capable of conquering power in order to begin a process of deep social transformation.

The history of successful revolutions ratifies the fact that in order to not waste popular energy and instead transform it into a force capable of bringing about change, a political organization is needed. One that can help overcome the dispersion and atomization of the exploited and oppressed by proposing an alternative national program to serve as a cohering instrument for broad popular sectors. Also needed are strategies and tactics that allow for unity in action to most effectively deal blows at the decisive moment and the decisive place to the powerful enemy that must be confronted in decisive moments and places. This is even more the case today when the potentially revolutionary popular subject—the class of workers and peasants—is so heterogeneous and fragmented in each country.

Solid organizational cohesion not only gives people the objective capacity to act; it also creates an internal climate that facilitates energetic intervention into unfolding events and allow us to make use of opportunities that are available. We must remember that in politics it is not enough to have reason; we must also have time and the necessary force to make it a reality.

A lack of clear ideas as to why we should struggle and the sensation of lacking solid instruments that can help us put into practice the decisions we have made can have a negative impact because of its paralyzing effect.

I recognize that these ideas go against the current trend. There are many who are not even willing to discuss them. They adopt a negative attitude because they associate such ideas with the

anti-democratic, authoritarian, bureaucratic, manipulative political practices that have characterized many leftist parties.

I believe it is fundamental that we overcome this subjective blockade and understand that when I speak of a political instrument, I am not talking about just any political instrument. I am talking about a political instrument adapted to the new times, one that we all have to build together.

But to create or remodel the new political instrument, we first have to change the political culture on the left and its vision of politics. This cannot be reduced to institutional political disputes for control of parliament, of local governments, to pass laws or win elections. This form of conceiving politics ignores the people and their struggles. Politics can also not be limited to the art of what is possible.

For the left, politics must be the art of making the impossible possible.<sup>3</sup> This is not some kind of voluntarist statement. What I am talking about is understanding politics as the art of constructing social and political forces that are capable of changing the balance of forces to the benefit of the popular movements, and making possible in the future what today appears to be impossible.

The vision I have of this political instrument is one of an organization that must abandon class reductionism by taking responsibility for defending all social groups that are excluded and discriminated against economically, socially, politically, and culturally. Although it should be concerned with class, its concern must also extend to ethno-cultural, race, gender, sex, and environmental problems. It must bear in mind not only organized workers' struggles but also the struggles of women, First Nations people, people of African descent, young people, children, the elderly, the differently abled, gays, etc.<sup>4</sup>

This must be an organization capable of raising a national project that can bring together all those sectors that are suffering due to the crisis and act as a compass for them.

This must be an organization that directs its efforts toward society, respecting the autonomy of social movements, that refuses to manipulate them.

This must be an orienting and cohering organization at the service of the social movements, and therefore it should not try to gather to its bosom all the legitimate representatives of everyone struggling for emancipation. Instead, it should strive to coordinate the movements' practices into one single political project, by generating meeting spaces so that the assorted social groups can recognize each other and grow in consciousness in the specific struggle that each group has to wage in its own area: the neighborhood, university, school, factory, etc.<sup>5</sup>

This must be an organization that understands politics to be the art of building forces. We have to overcome the old and deeply rooted error of attempting to build political force without building social force.

#### **POLITICAL STRATEGY FOR CURRENT SITUATION: A BROAD FRONT**

We need a political organization that is capable of making use of the depth of the current crisis and the broad-ranging nature of the variety of sectors affected by it. A highly favorable scenario has emerged for overcoming fragmentation and bringing together the growing and diverse social opposition into one single column, in order to form an alternative social bloc. An extremely broad social composition and enormous force means it is sure to continue growing and convoke legions of potential followers.

In cases where a left government exists, the strategic task is to cohere and mobilize all those social sectors interested in defending and deepening the changes that the government has begun to carry out and which are fiercely resisted by those sectors that oppose the changes.

The characteristics of this social bloc—which could unite the immense majority of the population—will vary from country to country. The weight of each social sector, of each ethnic group, etc., will be different in each country. In Latin America, they will

include not only traditional groups, such as the urban and rural working class and the poorest and most marginalized sectors, but might also involve impoverished sections of the middle classes, the constellation of small and medium-sized business owners and shopkeepers, informal workers, small and medium-sized agricultural producers, the majority of professionals, the legions of unemployed, cooperative members, retirees, the police, and lower-level military cadres (sub-officers and subordinate cadres).

I also believe that those capitalist sectors whose business dealings have come into objective contradiction with transnational capital could also form part of this social bloc. I am not here referring to those sectors of the bourgeoisie that are able to propose their own project for national development. Rather, I refer to those sectors that, in order to survive in the context of neoliberal globalization, have no other choice but to insert themselves in a national-popular project that can assure them support in the forms of loans and an increased internal market, the product of the social policies of such a government.

And just as neoliberalism impoverished the great majority of the peoples of our countries, not just in the economic sense but also in their subjectivity, their consciousness of themselves as social beings, we should not only talk about economically affected sectors but also all those who are discriminated against and oppressed by the system: women, youth, children, old people, indigenous peoples, Afro-descendants, certain religious groups, those with different sexual orientation, etc.

This bloc should house all those who suffer the consequences of the system and are willing to commit themselves in the struggle, first to put a halt to its advance and, afterward, to reverse its course.

Moreover, in a world in which the exercise of domination is carried out on a global scale, it is more necessary than ever to establish conditions and strategies for struggle at a regional and inter-regional level. The World Social Forums and other gatherings of an international character have enabled notable advances in this sense, although much is still to be done.

What Uruguayan senator Enrique Rubio wrote in 1994 remains as true today as it did then: we need to unite all those who are “excluded, left behind, dominated and exploited at the global scale, including those that live in developed countries. It is necessary . . . to put capitalism in check from the political, both inside and outside the state, whether militant or not, whether pro-party or not, from the social movements, from the scientific-technical complexes, from the cultural and communicational centers where views are molded in a decisive sense, and from self-managed organizations. . . . To put it in a slightly schematic and perhaps confronting fashion, the revolution will be international, democratic, multiple and profound, or it will not be.”<sup>6</sup>

I believe that in order to build this bloc, it is necessary for us to be capable of proposing concrete and specific tasks that prioritize points of convergence. We must be able to correctly deal with the contradictions that necessarily will emerge between such diverse sectors of society.

It is important to elaborate a program or platform of accumulation for the political conjuncture, which plays the role of a cohering instrument for all the “losers” of the neoliberal model. This must be a platform that proposes halting the development of the neoliberal project and offers concrete alternatives to the grave problems currently being faced by the people.

This must be a platform drafted with the participation of all those who want to be part of this process. I agree with Rafael Agacino that “the democratic exercise of elaborating policies, of building consensus around popular demands” is very important. “What we are dealing with,” he said, “is the opening up of spaces for politics from below, stimulating the most elementary act of communicating face to face, and from there advancing the practice of social processing of diverse interests, congenial minds and willing people around general rights of all those who live off their own labor.”<sup>7</sup>

This platform cannot be confused with the program of the political instrument. It must delve more deeply into the goal that is to be achieved and the path to reaching it.

*Winning Hearts and Minds of the Immense Majority*

Moreover, if our project for an alternative society to capitalism is essentially democratic, we have to be clear that we must win the hearts and minds of the immense majority of the people.<sup>8</sup> We cannot impose our project; we must convince people that this is the best project for them and encourage them to participate in the building of this new society.

What can we do to achieve these objectives?

First, we must understand that it is not enough to lecture people. As President Chávez said, the hearts and minds of the people are won in practice, creating opportunities for the people to understand the nature of the project at the same time as they become its builder.

Second, our call must be broad and not exclude anyone. All good-willed people who want to work for the benefit of the collective, for their well-being, to build solidarity with others, should be included, regardless of their political stripes or religious beliefs.

Third, our attitude must be one where the people feel that their opinions, information, criticisms, reflections, and initiatives are taken into consideration.

This also implies understanding that we cannot govern simply for our own supporters. How many people have we been able to win over to the process because they have seen the government help those who are worse off, regardless of whether they are government supporters or not!

This is why it is fundamental to differentiate between the destructive, conspiratorial opposition and the constructive opposition, and avoid putting all of them in the same basket. I think it could help win over many of those not currently on our side if we show that we are capable of recognizing the positive initiatives of the opposition rather than condemning everything they do. We must combat their erroneous ideas, their mistaken proposals, but we must destroy them with rational and coherent arguments and not with verbal aggression. Perhaps this verbal aggression is well

received by the most radicalized popular sectors, but it is rejected by large sections of the middle classes and in many popular sectors. People tend to not feel comfortable with these types of attacks.

We have to ask ourselves, why is it, despite the truth that our project for an alternative society to capitalism is beautiful, profound, and transformational, reflecting the interests of the great majority of the population, that the governments proposing such a project do not count on the support of all those who should be supporting it?

I think that in large part this is because an important part of the population does not know the true nature of our project. The opposition media has entrusted itself with disseminating misinformation, creating false alarms and, on many occasions, terrorizing the people in regard to what the future holds for them. But they are not the only ones responsible for this situation. We have also contributed to it. We tend to have big problems in adequately communicating the nature of our project. We do not dedicate sufficient time, resources, and creativity to this task. And, worse yet, on many occasions the very way we act negates our own project. We propose the creation of a democratic, solidarity-based, transparent, non-corrupt society, and yet we implement authoritarian, clientalist, egotistical, non-transparent practices. Many times there is a wide gap between what we say and what we do, and so what we say becomes less credible.

Thus we should not be surprised that important sections of society do not yet identify with our project and that it is necessary to win them over. We have to work on correcting our errors and overcoming deviations, as only in this manner can we win hegemony over society.

## *12. A New Political Instrument*

Previously, I discussed the necessity of building a new hegemony and why a political instrument is indispensable to achieving this. Now, I want to develop some ideas regarding the kind of instrument we need and the task that this political instrument needs to take up.

### **WHY A POLITICAL INSTRUMENT IS NECESSARY**

Historical experience shows that the intervention of the state or government to push forward the transition to socialism is crucial. Why is this state intervention necessary? Did this happen with capitalism, too? No, the historical process of capitalist development was very different.

Capitalist relations of production were born in the bosom of pre-capitalist societies, and the only mission of bourgeois revolutions was to conquer political power to then use it to foster the expansion of this mode of production, which has its own logic of development.

The capitalist dynamic is explained by the hunger for profit satiated by exploiting wage labor and the economic laws that govern this process, which is led by an economic logic. The state only

intervenes to create the two basic conditions for the existence of the capitalist mode of production: first the complete separation of the producer from his means of production, and second, primitive accumulation of money capital. When this mode of production has established itself, the state intervenes to facilitate or favor the logic of how it functions.

Nevertheless, socialist relations of production are not born spontaneously in the bosom of the preceding society but need the intervention of some kind of political organization that with the support of the people conquers state power—or at least government power. This is because, from that position, they can begin to create the conditions that allow them to move gradually toward establishing socialist relations of production in the various economic spheres of the society. The speed at which this happens depends on the objective conditions in each country.

### *A Weighty Inherited Culture*

However, the people who must be the main protagonists in the construction of the new society do not drop from the sky; they are dragging a weighty cultural heritage behind them. This is why a large process of cultural transformation is needed if socialism is to be built, a process in which the individualist, consumerist, paternalistic culture of every person for him or herself which has created the habit of waiting for the state to solve our problems, is gradually overcome.

A 21st century socialism will only be able to consolidate itself if we manage to impregnate present and future generations with a new humanistic and solidarity-infused ethics, one that respects nature and stresses being rather than having.

What is more, if the goal we are pursuing is the full development of each person, and each person is different from the next, one of the most important characteristics of socialist culture must be respect for difference and fighting sexism and all kinds of discrimination.

*Fragmentation of the Revolutionary Subject*

Another facet of the reality bequeathed to us is an incredibly fragmented society. Playing upon this fragmentation has been one of the strategies used by the enemy to weaken us. Our transition processes usually get under way with a heterogeneous working class weakened by the processes of labor casualization and subcontracting, and very divided internally, not only because of the objective conditions caused by neoliberalism but also because of ideological differences, personalities, and “*caudillismo*.” There are also a large number of social and political organizations that are fighting for their own goals and forget that the most important thing is to make the revolution.

*People Have No Experience of Governing*

Although the strategic objective aimed for is self-government by the people, in other words that the people govern themselves, that they assume power, this is not something that happens overnight. As Aristóbulo Istúriz says, our people do not have “a culture of participating,” they have no “real experience of governing”; they are a people used to “populism, cronyism, to not reasoning politically, to asking for things.” It is therefore necessary to govern with the people for a certain length of time so that they can learn to govern themselves.<sup>9</sup>

**THE TASKS OF THE POLITICAL INSTRUMENT**

Building socialism entails developing new relations of production, carrying out a real cultural revolution that allows us to go beyond the inherited culture and building a revolutionary subject who is the bedrock of the whole process. It also requires that the people undertake an apprenticeship in forms of self-government. These are not things that come about spontaneously, which is why we need a political instrument.

The following is a list of the most important tasks that this instrument must undertake.

**Struggle to transform the people's consciousness by fighting against the harmful cultural heritage of the past.** Marx was convinced that decades of “civil wars and national struggles, not only to bring about a change in society but also to change yourselves, and prepare yourselves for the exercise of political power” were required.<sup>10</sup> Through their social practices and their struggles people must leave behind the muck of inherited culture as they begin to discover, experiment with, and incorporate into their lives new values—the values of humanism, of solidarity, of respect for differences, the struggle against sexism and discrimination of all kinds.

However, these practices are not enough. New ideas are needed to go up against the old ideas, otherwise why would Marx have devoted his whole life to writing *Capital*? We need, as Fidel Castro said, to wage a battle of ideas. However, battles don't have a successful outcome if no one is leading them. This explains another of the reasons for having a political instrument.

This political organization must also take on the responsibility for drawing up an educational strategy—based on practice and structured courses—that will make it easier for its members and for the people in general to acquire new knowledge. This kind of knowledge will enable them to have a critical attitude concerning the inherited culture and begin to take on more and more responsibilities related to building the new society.

**Design a project for the country we want to build and guide the course the process takes.** A political organization is needed because we need a body that sets the scene for the first draft of a proposal, program, or national project that is an alternative to capitalism. This program or project should serve as a map for finding our way, for making sure we don't get lost, for putting the construction of socialism on the right road, for not confusing what has to be done now with what has to be done later, for knowing

what steps to take and how to take them. In other words, we need a compass to ensure the ship does not go adrift but reaches its destination safely.

If I have talked about a first draft drawn up by the political organization, it is because I believe we must be very mindful that, as it goes along, this project should be enriched and modified through social practice, with the opinions and suggestions from social actors. As previously stated, socialism cannot be decreed from on high, it has to be built with the people.

Rosa Luxemburg never tired of repeating that the path to socialism was not laid down in advance, nor were there predetermined formulas and blueprints, since the “modern proletarian class does not conduct its struggle according to any blueprint reproduced in a book or a theory; the modern workers’ struggle is a part of history, a part of social evolution, and we learn how we should fight in the midst of history, in the midst of evolution, in the midst of the struggle.”<sup>11</sup>

This task needs time, research, and knowledge of the national and international situation. It is not something that can be improvised overnight, much less in the complex world in which we live. This project must be set out in a program that serves as a map, which takes the concrete form of a national development plan.

The political instrument must stimulate a constant debate on the big national issues so that this plan, and the more concrete programs that stem from it, are constantly enriched. I agree with Farruco Sesto that these debates cannot be limited to a simple confrontation of ideas but should “lead to the collective construction of ideas and of answers to the problems. . . . Arguments added to or raised against other ideas will allow a shared truth to be created.”

The political organization should be, according to Sesto, “a huge workshop for strategic thought, deployed all over the country.”<sup>12</sup>

In particular, the political instrument should not only encourage an internal debate but should also endeavour to facilitate active participation in spaces for public debate—such as those previously

mentioned—on subjects of more general interest, in which all interested citizens can take part.

For this reason, I find myself once again in agreement with Farruco, that since the party is not something apart from the people but rather has to make “its life within the people,” the ideal place for this debate is “in the bosom of the popular movement.” Moreover, “if one of the strategic lines of the revolution is to transfer power to the people, that implies transferring not only the ability to take decisions but also that of working out the basis for that decision” because “producing ideas and making clear the road to take is the most important activity in the exercise of power.”<sup>13</sup>

**Eliminate the social and political fragmentation we have inherited.** We need a political body that understands it is not enough to create a huge organization with hundreds of thousands of members; we must go beyond that. We have to create places (cyber or real) where people can meet. We must encourage coordination of the various emancipatory practices that exist by trying to bring together all the actors to discuss goals they have in common: parties, social movements, organizations, and individuals. Our political instruments should be instances for promoting the unity of the people, capable of filling millions of women and men with the enthusiasm to fight for a common goal.

On the other hand, we should strive through our political instruments to construct collective leaderships, and need to understand the positive role that a charismatic leadership can play in the initial stage of the transition process, given the extraordinarily fragmented societies such leaders inherit. Their charisma can contribute vastly to uniting the different sectors of the people. But these leaders should also understand that good leaders are those who create the conditions in which they become less and less indispensable. They should encourage the development of new leaders and the construction of a more collective leadership.

The elements I have outlined here help us understand why several of our presidents have sought to allow and actively promote their reelection to office, a decision forcefully attacked by the opposition, which accuses them of wanting to perpetuate themselves in power.

In this sense it is interesting to note that the *New York Times* has defended the issue of continuous reelection. An October 1, 2008, editorial criticized term limits because it supported the reelection of the mayor of New York City. The newspaper argued that term limits tend to limit elected officials' focus to short-term plans that can be implemented quickly, instead of projects based on a vision for the future that require much more time to be implemented. If a mayor requires more time, we can imagine how much more time will be required by those presidents who seek to radically transform society. We should not be surprised, therefore, that some of our rulers have decided to take measures to allow their reelection to office.

**Encourage and facilitate the people's protagonistic participation.** Finally, we have the most important task, because without it we will never manage to build socialism. What is needed is a political instrument that encourages popular protagonism in the most varied social and political milieus in the country, one that puts itself at the service of that participation so that it is the people themselves who build the new society. We cannot afford to repeat the Soviet experience, which Kropotkin criticized as one in which the party ended up drowning the creative initiative of popular organizations.<sup>14</sup>

Only thus will we be true to the thesis that revolutionary practice is essential for workers' emancipation and that of the popular movement in general. It is through practice that full human development is reached, this being the most important goal we are aiming for.

To the aforementioned tasks, we need to add two additional ones.

**Seek out and recruit new cadres who can breathe new life into and renew the political instrument.** All processes dedicated to building socialism are faced with the problem of a scarcity of cadres. Generally there are very few revolutionary cadres available, those politically and technically ready to carry out efficiently the multiple and complex tasks that building socialism entails. This is why all of our left governments have had to rely on the expertise of many professionals and technicians who have worked for previous governments, people not exactly brimming with revolutionary consciousness.

This situation must necessarily change if we really want to push ahead with building socialism. The political instrument should be especially concerned with spotting the new cadres who are coming up in the various spaces for popular participation created by the revolution.

As a temporary measure, perhaps, the revolution could rely on foreign professionals and technicians who are committed to the revolutionary project and whose most important job would be to get underway a process of training the new national cadres.

In addition, new cadres with the new values are needed to revitalize and renew the political instrument.

**Give early warning of the weaknesses perceived and the mistakes being made.** Lastly, the political instrument should detect in time weaknesses and errors that are made and that have an objective basis, given that our governments will confront limitations such as the following: a) The task of construction must be undertaken with an inherited state structure; b) This state structure will be staffed by professional and technical cadres who do not share our goal; c) The new government has to rely on a people whose political consciousness is far from ideal; d) It will have to experiment on how to go about transforming the relations of production in societies where scarcity and not abundance is king; e) It will often have to contend with parties created to compete in elections that are plagued by opportunists who want to take advantage of their party affiliation to obtain some job or privilege; f) It will

temporarily have to accept the fact that top party leaders are also top state officials because of the scarcity of qualified cadres; and finally, h) it will have to confront the permanent danger that even the most revolutionary cadres will become “bureaucratized.” The inherited state apparatus has a habit of swallowing up many who, bit by bit, abandon revolutionary logic and begin to operate under an administrative logic, or become corrupt.

In a process with these characteristics it is difficult to avoid mistakes and deviations. That explains the need for a political instrument that acts as the critical conscience of the process, gives early warnings so these errors and deviations can be corrected, and is also highly self-critical.

### CHARACTERISTICS OF THE KIND OF POLITICAL ACTIVISTS WE NEED

If we revolutionary activists are to contribute to the construction of socialism—the goal of which is full human development through practice—our most important task must be to encourage and facilitate popular protagonism.

However to do that, we have to begin by changing our way of thinking about politics. We cannot reduce politics to the battle to get a job in state institutions, nor want to govern from above because we think we are in possession of the truth.

Let us look at the most important characteristics the members of the new political organization must have.

#### *Way of Life and Activism*

One of the difficulties we face when building socialism is the cultural heritage of our peoples, the type of consciousness they have inherited. We have to build socialism without yet having people who have accepted socialist values as their own. However, we cannot build socialism without socialist men and woman. How

can we resolve this contradiction? What happens is that there are people who—because of their commitment to earlier struggles—have managed to transform their consciousness and begin to follow socialist values. These are the people who must be the members of the new political instrument.

Those of us who are members must be careful that our own practice does not violate the values of the new society we want to build.

In a world where corruption holds sway and political parties, and politics in general, are losing more and more prestige, it is of the utmost importance that we present a radically different ethical profile, one embodying values we exhibit in our daily lives. We must be democratic, show solidarity, be willing to cooperate with others, practice camaraderie, be honest at all costs, and practice clear-headedness. We must project vitality and *joie de vivre*.

Our practice must be consistent with our political discourse. Octavio Alberola notes: “People turn away from those churches that promise democracy without discrimination for all social classes yet deny their own loyal members basic freedom of expression when they do not blindly accept their slogans. . . . General staff who, on their own, negotiate and make agreements about the welfare of all. . . . Giant [party] machinery that takes away initiative, action, and the right to speak from individual members. . . .”<sup>15</sup>

Since the social revolution’s aim “is not only the struggle for survival but also the struggle to transform our way of living,” as Orlando Núñez says, “we have to venture into the realm of morality and love in search of a direct, daily transformation of [our] way of living, thinking and feeling.”<sup>16</sup>

If we fight for women’s social liberation, we should begin right now to change the women-men relationship in the family and eliminate the division of labor in the home and sexist culture. If we believe that young people are the raw material for our work, we must educate them to think for themselves, adopt their own positions, and be capable of defending them, based upon what they feel and think. If we fight against racial discrimination, we must behave in a manner consistent with that in our own lives.

*Nonsectarian, Willing to Dialogue and Coordinate*

We have to understand that if we are to be victorious, we need the support of the overwhelming majority of the people. To do that we have to create places, spaces where people can meet and exchange ideas, and we must coordinate all revolutionary forces.

All manifestations of sectarianism, each high-handed attitude, will only serve to weaken the march toward socialism. We cannot impose our ideas and our candidates just because we are the majority political organization, even if we are the majority by a long way. A small revolutionary organization can have, proportionally, more cadres ready to assume government tasks than the majority party has. What should count here is quality not quantity and, of course, loyalty to the government program. We must avoid reproducing the harmful practice of the Chilean Popular Unity in which all jobs were shared out on a quota system. When each party had a quota and carried on with its own policies.

We should learn from the new social actors of the twenty-first century. They are particularly sensitive to the topic of democracy. Their fights have generally had as a starting point the fight against oppression and discrimination. They reject being manipulated and demand that their autonomy be respected and that they can participate democratically in the making of decisions. In their organizations they seek consensus, and if this is not possible, they believe decisions should be adopted by a large majority. The Landless Workers' Movement (MST) of Brazil, for example, avoids using narrow majorities to impose its will on those who are in minority. It considers that if it is not the great majority, it doesn't make sense to impose a measure adopted by a narrow majority. It is preferable to wait until people continue to mature and end up being convinced by themselves of the correctness of that measure. Doing so they avoid internal disastrous divisions, so often suffered by movements and left parties, and they avoid big errors that could be made.

On the other hand, we should respect minority positions whenever they are willing to be channeled within the democratic process, remembering that historically there have been minorities who have been right because their analysis of the situation has been more accurate and because they were able to discover the real motivations of given social sectors.

### *Disciplined*

Another characteristic is that our militants should have discipline. The MST considers internal discipline to be a measure of respect for collective decisions. Discipline should be demonstrated for both big decisions and small questions; for example, arriving on time for meetings.

“If there is at least a little discipline, people will respect decisions made at all echelons. . . . This is neither militarism nor authoritarianism; it is only one of the rules of democracy,” João Pedro Stédile says. “There is no democracy without rules or regulations to control the behavior of the whole group. The discipline consists of accepting the rules of the game. We have learned this from football and in the Catholic Church, which is one of the oldest organizations in the world. . . . If somebody is in the organization of their free will, they must help to define the rules and respect them, they must be disciplined, respect the collective. Otherwise, the organization will not grow.”<sup>17</sup>

### *Respect for the People's Autonomous Organizations*

We must contribute to the autonomous development of the people's autonomous organizations, abandoning any attempt at manipulation. We must have as one of our main tenets that political cadres are not the only ones who have ideas and proposals and that, indeed, the popular movement has a great deal to offer, because through its daily struggles it learns, it discovers ways, finds answers, invents methods that can be very enriching.

*Not Cadres with an “I Order—You Obey” Mentality,  
but Popular Educators*

The members and especially the leaders of the new political instrument cannot have an “I order—you obey” cast of mind. We political cadres must be first and foremost popular educators, able to empower all the popular wisdom that exists in the people—both that which comes from their cultural traditions and their traditions of struggle and that which they acquire as they toil every day for subsistence. We must merge this popular wisdom with the more global kind of knowledge that a political organization can contribute. This is why the slogan “Order by obeying” is so wise.

**BUREAUCRATISM: THE BIGGEST SCOURGE**

One of the deviations that did most damage to the historical experiences of Soviet socialism was bureaucratism. Why do we say this? Because it destroys the people’s energy and creativity, that of the real builders of the new society, and therefore prevents the goal of 21st century socialism from being reached. This goal is that women and men develop themselves completely through revolutionary practice itself.

Due to the disastrous consequences of bureaucratism, I choose to delve deeper into this issue.

*The Roots of Bureaucratism*

Earlier, when discussing the subject of decentralization, I said that one cannot attribute the existence of bureaucratism in the Soviet state simply to the legacy of the tsarist past. Instead it is more correct to attribute to point to the excessive centralization that existed in that state. However, if excessive centralization inevitably leads to bureaucratism, this phenomenon can also arise in state institutions, in parties and other kinds of public or private institutions.

Moreover, if it were only a matter of red tape and being shunted around, all that would have to be done would be to improve management methods. But that doesn't work.

Where, then, lies the root of this disaster? It is related to the basic question of how management in an institution is conceived of and implemented. Do the top civil servants or cadres make the decisions because they think they are the only ones who have the expertise to do so, or is trust placed in the membership and the organized people, in their energy and creativity?

*Civil Servants or Cadres Who Turn Their Backs  
on the People's Initiatives*

It was often said in the Soviet Union that progress could only come about in that country devastated by an imperialist and a civil war if the workers and peasants en masse were committed to work for the country's reconstruction. Nevertheless, when the workers and peasants took these remarks seriously and tried to apply them in real life by taking the initiative on various occasions (by organizing, for example, a people's cafeteria or a day care center to increase female participation in the labor force), their efforts were rejected by the central authorities, both party and government, on various pretexts. The bottom line, however, was that the party could not stand the fact that the people had done things not controlled by them.

*Direct Negation of the People's Autonomous Activity*

Bureaucratism is the direct negation of autonomous activity. Any independent initiative, any new thought is considered heresy, a violation of party discipline. The center must decide and supervise each and every thing that is done. Nothing can be done if the order didn't come from the center.

Alexandra Kollontai, the feminist Russian revolutionary and leader of the Workers' Opposition, gives an enlightening example: "What would happen if some of the members of the Russian

Communist Party—those, for instance, who are fond of birds—decided to form a society for the preservation of birds? The idea itself seems useful. It does not in any way undermine any state project. But it only seems this way. All of a sudden there would appear some bureaucratic institution that would claim the right to manage this particular undertaking. That particular institution would immediately ‘incorporate’ the society into the Soviet machine, deadening, thereby, the direct initiative. And instead of direct initiative, there would appear a heap of paper decrees and regulations which would give enough work to hundreds of other officials.”<sup>18</sup>

### *Someone Else Decides for You*

Bureaucratism tries to solve problems with formal decisions made by one person or a small group, both in the party and in some state institutions, but the real stakeholders are never consulted. This way of operating not only restricts the initiative of party members but also that of the non-party masses. The essence of bureaucratism is that someone else decides for you.

### **THE NEED TO ENCOURAGE PUBLIC CRITICISM IN ORDER TO SAVE THE PARTY**

As discussed previously, a long process of cultural transformation is required to free ourselves of the muck of the inherited culture. According to Marx, this transformation can only be achieved after decades of civil wars and people’s struggles, and history has proved him right. It is not only difficult for the common people to change; but this is also true of some of those who are members of the political organization itself.

Even the parties with the most experience in revolutionary struggle, those who led wars of national liberation for many years, such as the Chinese Communist Party or the Vietnamese

Communist Party, have suffered from the scourge of bureaucratism and corruption. In spite of the enormous sacrifices they made during the long years of struggle to liberate their peoples, several of the leaders no longer serve the people, have moved away from them, have become arrogant, treat others in a high-handed authoritarian manner, enjoy privileges, and have become corrupt.

### *Why Do These Situations Arise?*

We must remember that revolutions carry the load of an inherited culture on their shoulders, a culture in which those who held public office always had special considerations and privileges.

Moreover, if their political future does not depend on the people, whom they should serve, but on their superiors, it is natural that these civil servants would be more inclined to satisfy the demands of their superiors than to respond to the people's needs and aspirations. What tends to happen is that because they want to please their superiors or to obtain monetary rewards, they falsify data or obtain the results demanded of them at the cost of the quality of public works. Indeed, it was rather common in socialist countries to inflate production data. However, this is not only negative from a moral point of view but extremely negative from a political point of view, because by falsifying data, they are providing bad information about the situation that really exists, which prevents the party or government from taking the necessary corrective measures.

I should also add that what tends to happen is that those who flatter their bosses tend to be promoted to posts with more responsibility, whereas those who criticize and adopt an independent posture are marginalized in spite of being competent.

Then again, since there is no encouragement for the people to exercise control over the way cadres behave, misappropriation of public resources for personal purposes becomes very tempting.

*How to Fight against These Mistakes and Deviations*

How can we fight against these errors and deviations? Can we trust the party itself to resolve its problems internally by, for example, creating an ethics committee charged with dealing with these situations? It seems that this is not the solution.

History has shown—especially in one-party regimes or regimes with an obviously hegemonic party that controls the government and often confuses itself with the government—that it is necessary for the party to be controlled from below and be subject to public criticism. That seems to be the only way to prevent cadres from becoming bureaucratized and corrupt and thinking they are the lords of the people's destiny, and accordingly putting the brakes on popular protagonism.

Mao Zedong explained the need for criticism and self-criticism by using the image of a room that needs to be cleaned regularly to prevent it from filling up with dust. His words on this point were: "The only effective way to prevent all kinds of political dust and germs from contaminating the minds of our comrades and the body of our Party" is, among other things, "to fear neither criticism nor self-criticism," "to say all you know and say it without reserve." "Blame not the speaker but be warned by his words" and "correct mistakes if you have committed them and guard against them if you have not."<sup>19</sup>

**CRITICIZING FUNCTIONARIES TO SAVE THE PARTY**

There are some journalists who, when faced with the mistakes and deviations committed by party cadres, try to convince us that any party, or as I prefer to call them, any political instrument, is bad. I think that I have given enough arguments above to substantiate the thesis that we cannot do without a party when building socialism. The point, then, is not to try to do without a political instrument but to find ways of correcting these possible deviations.

Therefore, in the same way that Lenin thought that to save the Soviet state it was necessary to accept the existence of strike movements that fight against bureaucratic deviations, we think today that to save our governments and our political instruments, which are much more than the sum of their leaders, we must allow the organized people to publicly question the mistakes and deviations that some of their cadres may commit.

There is a basic argument for this. We must remember that the political organization is an instrument created so we can achieve the socialist goal of full human development for all people, and therefore it is the people and not the party that is the most important thing. The people have the right to watch over the instrument that will help them to develop themselves and make sure that it fulfills its role, that its cadres really help develop popular protagonism, that they do not try to stifle people's initiatives or disrespect them, and much less use their positions to gain privileges or unjustified rewards.

If we are realists, we cannot think that the very leaders of the party will commit hara-kiri. There is a tendency for leaders to want to protect themselves from criticism by their subordinates and by the people in general. Therefore it is extremely important that it be the people who supervise the actions of government and party leaders. For that reason, the people must be allowed to criticize these leaders' mistakes publicly without being accused of having an "anti-party attitude." The political instrument has to understand that getting rid of these arrogant, corrupt officials who are causing it to lose prestige can only strengthen the party.

It is important that the people's uneasiness over the mistakes or deviations that the leaders make is not suffered in silence, because it can build up inside and explode at any moment. However, if channels for expressing this discontent are established, the defects identified can be corrected in time.

*Public Criticism Does Not Weaken the Revolution, It Strengthens It*

An argument often used to condemn public criticism is that it is used by enemies to weaken the party and the transformation process. This is the reason why some accuse those who criticize to be anti-party or counterrevolutionaries.

On this point, the remarks Fidel Castro made on criticism and self-criticism are important. He made them after half a century of revolution, in an interview given to Ignacio Ramonet, editor of *Le Monde Diplomatique*. Some days previously, on 17 November 2005, the leader of the Cuban Revolution had said that “a fight to the finish” must be waged against certain evils that existed in Cuba, such as small-scale corruption, theft from the state, and illegal enrichment. He also told Ramonet that they were “inviting the whole country to cooperate in this battle, the battle against all defects, including small theft and massive waste, of any sort and in any place.” When Ramonet asked him why the “usual method of recurring to criticism and self-criticism didn’t work,” Fidel replied:

We used to trust in criticism and self-criticism, it’s true. But this has become almost fossilized. That method, in the way it was being used, no longer really worked because the criticism tended to be inside a small group; broader criticism was never used, criticism in a theatre, for example, with hundreds or thousands of people. . . .

We have to resort to criticism and self-criticism in the classroom, in the workplace and outside the workplace, in the municipality and in the country. . . . We must take advantage of the shame that I am sure people feel.<sup>20</sup>

A little later in the interview, after having admitted to various mistakes made by the revolution, and encouraged by another of Ramonet’s questions he said: “I am not afraid of accepting the responsibility I have to accept. . . . We cannot go about being wimpy. Let them attack me, let them criticize me. Yes, many must

be hurting a little. . . . We have to take risks, we have to have the courage to tell the truth.”

However, what I found the most surprising and the most interesting was what he said next:

It doesn't matter what those bandits abroad say and the cables that come in tomorrow and the day after tomorrow making ironic comments. He who laughs last laughs loudest. And that is not saying bad things about the revolution. That is saying very good things about the revolution because we are talking about a revolution that can deal with these problems, can take the bull by the horns, better than a Madrid bullfighter. We must have the courage to admit our own mistakes precisely for this reason, because this is the only way to achieve the objective we set out to achieve.<sup>21</sup>

To sum up, public criticism can be used by the enemy to attack the party and the revolution, but it can be better used by revolutionaries to correct mistakes in time and thus strengthen the party and the revolution.

#### *When Will Public Criticism Not Be Necessary?*

If the political instrument had an excellent information system that allowed it to quickly identify which of its cadres had fallen into errors or deviations; and if, moreover, it took immediate measures against those cadres, there would be no need for public criticism. Nor would there be any need for it if this information were provided from outside the party or from its own grassroots members and the party had time to process the information and adopt the relevant sanctions.

However, if these conditions do not exist, and the mistakes and deviation that occur every day are in full view of everyone, including the opposition, my opinion is that there is no other option but to denounce them publicly so as to appeal, as Fidel says, to the

shame of those who are destroying the political instrument with their attitude.

Is it not better to ask the people, those who have firsthand experience of the cadres' defects, to watch over their behavior and denounce the mistakes and deviations they commit, and do so constructively? Is that not better than having our enemies, filled with rage and the desire to destroy our revolutionary project, denounce them?

### *How Can We Avoid Anarchic Criticism?*

However, stressing the need for public criticism does not mean swallowing any old public criticism. We must avoid anarchic, destructive, ill-founded criticism. Criticism must be filled with the desire to solve problems, not to increase their number.

To do that, it is necessary that a) criticism and denunciations be well-founded; b) strong sanctions exist for those who make unfounded criticisms or denunciations; c) criticisms are accompanied by proposals for solutions; d) an effort is made to get criticisms to the party first; and if they are not answered after a short space of time, then they can be made public.

The ideal situation is for the party to take the initiative and open up public spaces so all those interested can make known their opinions on how the party and state cadres in a given locality are operating.

## CONCLUSION

These reflections about the political instrument needed to build 21st century socialism are intended to show how we imagine the horizon toward which a growing number of Latin American governments are moving.

However, so that this task may be successfully carried out, we need a new left culture: a tolerant and pluralist culture that gives

the most important place to everything that unites and a secondary place to that which divides; that promotes unity around values such as solidarity, humanism, respect for difference, and protection of the environment; and that turns its back on the hunger for profit and the laws of the market as the principles that guide human activity.

We need a left that begins to realize that being radical does not consist of raising the most radical slogan or in carrying out the most radical actions—which only a few agree with and which scare off the majority—but is instead about being capable of creating spaces for bringing together the broadest possible sectors where minds can meet and join in struggle. Realizing that there are many of us who are in the same struggle is what makes us strong; it is what radicalizes us.

We need a left that understands we must obtain hegemony; that is to say, we need to convince rather than impose.

We need a left that understands that more important than what we have done in the past is what we do together in the future to win our sovereignty and build a society that makes possible the full development of human beings: the socialist society of the 21st century.

# Notes

## Introduction

1. Marta Harnecker, “Five Reflections About 21st Century Socialism,” *Solidarity Economy*, June 18, 2012; Marta Harnecker, “Conquering a New Popular Hegemony,” *Links*, September 21, 2012.

## Part I: Latin America Advances

1. The first part of this book has benefited from the valuable contributions of Chilean investigator Ximena de la Barra and Mexican investigator Ana Esther Ceceña, who provided me with valuable suggestions and new elements for consideration after reading an earlier draft.
2. In total, Chávez won four presidential elections (1998, 2000, 2006, and 2012) and a recall referendum (2004).
3. Roberto Regalado, Introduction to *América latina hoy ¿reforma o revolución?* (Mexico: Ocean Sur, 2009), ix.
4. According to Eric Toussaint: “Cuba [played] a pioneering role. It attempted to promote the creation of an international front for the non-payment of foreign debt, but unfortunately was not able to win the support of other governments.” In Preface to Esther Vivas, *La lucha contra la deuda externa, campañas internacionales y en el Estado español* (Madrid: El Viejo Topo, 2007). This campaign “garnered support from a number of important peasant organizations, trade unions, parties . . . in Brazil, Argentina, Peru, Ecuador and Mexico. It was a massive and popular campaign that included street mobilizations and the publication of books and informational materials. Despite this, Latin American governments in the end opted against building a united front for non-payment.”
5. Speech at event to commemorate the 24th anniversary of the Caracazo, February 2, 2013, available at <http://www.youtube.com/watch?v=W7vIIC9fgVg>.

6. The exact death toll was never known. The government officially recognized 372 deaths, but some human rights organizations put the figure at around 5,000.
7. Marta Harnecker, *La izquierda después de Seattle* (Madrid: Siglo XXI, 2002), in particular “Primera Parte, Capítulo V. Ecuador: Movimiento indígena encabeza la lucha”; and Marta Harnecker, *Ecuador: Una nueva izquierda en busca de la vida en plenitud* (Caracas: Monte Avila, 2013).
8. Víctor Toledo Llancaqueo, *Pueblo mapuche: Derechos colectivos y territorio, Desafíos para la sustentabilidad democrática* (Santiago de Chile: LOM ediciones, 2006) 103.
9. *Ibid.*, 104–5, 107.
10. This repression has been denounced by, among others, UN Special Rapporteur for Indigenous Peoples Rodolfo Stavenhagen and Pedro Cayuqueo, the editor of the Mapuche newspaper *Azkintuwe*.
11. Marta Harnecker, *Forjando la esperanza* (Santiago de Chile: LOM ediciones, 1995).
12. *Ibid.*, 177–78.
13. Harnecker, *La izquierda después de Seattle*.
14. Founded in 1984, the MST unites sharecroppers, tenants, rural workers, occupants, and small farmers. It is estimated that out of the 800,000 families that have been given access to land since the end of the military dictatorship until now, some 450,000 follow the MST, and another 80,000–100,000 are in occupation camps demanding land.
15. Marta Harnecker, *Sin Tierra: Construyendo movimiento social* (Madrid: Siglo XXI, 2002)
16. Marta Harnecker and Federico Fuentes, *MAS-IPSP: Instrumento político que surge de los movimientos sociales* (Caracas: CIM-Monte Ávila Editores, 2008), in particular chapter 1 of Part 2, “Explosiones sociales y ciclos de lucha.”
17. Ana Esther Ceceña, “Procesos emancipatorios y militarización de nuestra América en el siglo XXI,” *Línea Sur* 4 (Ministerio de Relaciones Exteriores, Comercio e Integración, Ecuador) 2013: 86.
18. Thomas E. Ambrogi, “Jubileo 2000: La campaña para la cancelación de la deuda,” *Revista del Sur*, September 1999, [http://old.redtercermundo.org.uy/revista\\_del\\_sur/texto\\_completo.php?id=735](http://old.redtercermundo.org.uy/revista_del_sur/texto_completo.php?id=735).
19. Justino Martínez Pérez, “Triple grito por dignidad, justicia y vida,” *Red Ciudadana por la Abolición de la Deuda Externa*.
20. Ceceña, “Procesos emancipatorios y militarización de nuestra América en el siglo XXI,” 89.
21. Gabriel Boric, ex-president of FECH in 2011, interviewed in Marta Harnecker, “Entrevista colectiva a dirigentes estudiantiles de la FECH,” Santiago de Chile, November 25, 2012, unpublished manuscript.
22. *Ibid.*
23. Author’s interview with Francisco Figueroa, FECH vice president, November 2011.

24. Tomás Moulián, *Chile actual, anatomía de un mito* (Santiago de Chile: Ed. Arcis/LOM ediciones, 1997), 102–14.
25. Harnecker, “Entrevista colectiva a dirigentes estudiantiles de la FECH.”
26. Andrés Fielbaum, in *ibid.*
27. Gabriel Boric, in *ibid.*
28. Ceceña, “Procesos emancipatorios y militarización de nuestra América en el siglo XXI,” 89.
29. *Forajidos* was the name that Lucio Gutiérrez gave to the protestors; it was later appropriated by the movement that overthrew him.
30. “One section of the elites saw Lucio as a *cholo* (half-caste) who could not be president of Ecuador,” said Osvaldo León in an interview I did with him for my book *Ecuador: Una nueva izquierda en busca de la vida en plenitud*.
31. Ximena de la Barra, “Estructuras legales transformadoras en América latina en el siglo XXI,” *Revista Sociedad y Equidad* 1 (January 2011).
32. Francis Fukuyama, “The End of History?” *The National Interest* (Summer 1989).

73. Pomar, “10 anos de PT no governo e o desafio de uma esquerda socialista de massas.”
74. Valter Pomar, “La línea del Ecuador,” *Rebelión*, October 12, 2008.
75. Michael A. Lebowitz, “Venezuela: A Good Example of the Bad Left,” *Monthly Review* 59/3 (July–August 2007).

### **Part 2: Where Are We Going? Twenty-First Century Socialism**

1. Hugo Chávez Frías, *Discurso de la unidad* (Caracas: Ediciones socialismo del siglo XXI, 2007), 41.
2. An empanada is a typical Chilean food.
3. Diana Raby, *Democracy and Revolution. Latin America and Socialism Today* (London: Pluto Press, 2006), 33.
4. Some authors, such as Michael Lebowitz, prefer to call it “socialism for the 21st century.”
5. Tomás Moulián, *Socialismo del Siglo XXI: La Quinta Vía* (Santiago de Chile: LOM Ediciones, 2000). On the debate over who first used the term, see Javier Biardeau, “El nuevo socialismo del siglo XXI. Una breve guía de referencia,” April 5, 2009.
6. Chávez Frías, *Discurso de la unidad*, 37.
7. *Ibid.*, 37–39, 44.
8. *Ibid.*, 47.
9. Álvaro García Linera identifies four civilizing regimes in Bolivia. “The first is the modern, mercantile, industrial regime, the second is economy and culture organised around simple domestic type mercantile activity, either

craft or peasant (this activity accounts for 68 percent of urban employment), the third is communal civilization and the fourth and final is Amazonian civilization based on the itinerant character of its productive activity, technology based on individual knowledge and industriousness and the absence of a state.” Altogether, two-thirds of the country’s inhabitants are in the last three “civilizing or societal bands.” Furthermore, most of the Bolivian population “is submerged in economic, cognitive and cultural structures that are non-industrial and, in addition, are carriers of other cultural and linguistic identities and other political habits and techniques that stem from their own technical and material life: placing collective identity above individuality, deliberative practice above elections, normative coercion as a form of behavior that is rewarded above free acceptance and compliance, the depersonalisation of power, its consensual revocability, rotation of positions etc., are forms of behavior that speak of political cultures different from liberal and party representative political cultures.” Álvaro García Linera, “Estado plurinacional,” in Álvaro García Linera, Luis Tapia Mealla, and Raúl Prada Alcoresa, *La transformación pluralista del estado* (La Paz: Muela del Diablo, 2007), 46.

10. Chávez Frías, *Discurso de la unidad*, 44.
11. In his *Critique of the Gotha Program*, Karl Marx spoke of the “all round development of the individual” (Moscow: Progress Publishers, 1971), 18.
12. See Michael A. Lebowitz, *Build It Now: Socialism for the Twenty-first Century* (New York: Monthly Review Press, 2006); Michael A. Lebowitz, *The Path to Human Development: Capitalism or Socialism?* (Toronto: The Socialist Project, 2009); and Michael A. Lebowitz, *The Socialist Alternative: Real Human Development* (New York: Monthly Review Press, 2010).
13. “Above all we must avoid postulating “society” again as an abstraction vis-à-vis the individual. The individual is the social being. His manifestations of life—even if they may not appear in the direct form of communal manifestations of life carried out in association with others—are therefore an expression and confirmation of social life. Man’s individual and species-life are not different, however much—and this is inevitable—the mode of existence of the individual is a more particular or more general mode of the life of the species, or the life of the species is a more particular or more general individual life.” Karl Marx, “Economic and Philosophic Manuscripts of 1844,” in Karl Marx and Frederick Engels, *Collected Works*, vol. 3, (New York: International Publishers, 1975), 299.
14. Miodrag Zecevic, *The Delegate System* (Belgrade: Jugoslovenska stvarnost, 1977).
15. Marx, *Critique of the Gotha Program*, 17–18.
16. I have borrowed this idea from Michael Lebowitz. He writes: “Read *Capital* with the purpose of identifying the inversions and distortions that produce truncated human beings in capitalism and we can get a sense of Marx’s idea of what is ‘peculiar to and characteristic of’ production in the ‘inverse situation,’ socialism.” *The Socialist Alternative, Real Human Development*, 56–57.

17. Karl Marx, *Capital*, vol. 1 (New York: Vintage Books, 1976), 283; and Karl Marx, *Capital*, vol. 3 (New York: Vintage Books, 1976), 949.
18. Marx, *Capital*, vol. 3, 959.
19. Frederick Engels, “Principles of Communism,” in Marx and Engels, *Collected Works*, vol. 6 (New York: International Publishers, 1976), 353.
20. Regarding the influence of Liebig on Marx, see John Bellamy Foster, *Marx’s Ecology: Materialism and Nature* (New York: Monthly Review Press, 2000), 149–56.
21. *Ibid.*, 142.
22. Marx, *Capital*, vol. 1, 637–38.
23. Frederick Engels, *Socialism: Utopian and Scientific* (Sydney: Resistance Books, 1999), 90.
24. Alfredo Maneiro, *Ideas políticas para el debate actual, Selección de Marta Harnecker* (Caracas: Ministerio del Poder Popular para la Cultura, 2007), 35–36.
25. Personal comments sent to the author on a previous version of this text.
26. In Venezuela, municipalities are divided into parishes.
27. Lebowitz, *The Path to Human Development: Capitalism or Socialism?*, 27
28. The letter goes on to say: “At present, it is the party committees, not the soviets, who rule in Russia. And their organization suffers from the defects of bureaucratic organization. To move away from the current disorder, Russia must return to the creative genius of local forces.” Peter Kropotkin to V. Lenin, March 4, 1920.
29. Marta Harnecker, “De los consejos comunales a las comunas,” *Rebelión*, February 22, 2010.
30. “What they are electing,” says Tapia, “is a person that will substitute for the citizens, for a period of time, in carrying out executive or legislative tasks within the state, be that at a municipal or national level. What the representative does after being elected may have no relation to what the citizens that voted for them want, in the sense that there is no space for citizens to participate and feed through their political opinions to the supposed representative.” Luis Tapia Mealla, “Gobierno multicultural y democracia directa nacional,” in García Linera, Tapia Mealla, and Prada Alcoresa, *La transformación pluralista del estado* (La Paz: Muela del Diablo, 2007), 126–27.
31. Álvaro García Linera, concluding remarks at a press conference in Maracaibo, Venezuela, during the VI International Forum on Philosophy.
32. Karl Marx, “The Civil War in France,” in Karl Marx and Frederick Engels, *Selected Works*, vol. 2 (Moscow: Progress Publishers, 1977), 222.
33. István Mészáros, *Beyond Capital* (New York: Monthly Review Press, 1995), 906. According to Mészáros, the positive reference made by Lenin in *The State and Revolution* “to the experience of the Paris Commune (as the direct involvement of all the poor, exploited sections of the population in the exercise of power) disappeared from his speeches and writings and the accent was laid on ‘the need for a central authority.’” A little further on, he

- says, “The ideal of autonomous working class action had been replaced by the advocacy of the greatest possible centralisation.”

57. Lebowitz, *The Socialist Alternative*, 31–45.
58. Another example of separation between juridical and real ownership is when the state intervenes in a company. The capitalist continues to be the owner from the legal point of view, but the state-appointed managers decide how the means of production are to be used and what is to be produced.
59. Engels, *Socialism: Utopian and Scientific*, 90.
60. “Social ownership is best defined as ownership by those affected by decisions over the use of the assets involved, in proportion to the extent to which they are affected. It has much in common with the green concept of stakeholding. Following the principle of subsidiarity which underpins, at least in theory, the multi-layered governance structure of the European Community, the social owners will differ according to the degree of generality, the reach, of the decisions to be made. Decisions made at higher levels of generality will involve more assets and affect a wider range of people and interests than those made at lower levels. At each level, the social owners need to negotiate with one another to agree on the use of the assets that will further their collective social interest, as defined by them. This multi-layered process of negotiated coordination is what is meant by participatory planning.” Pat Devine, “Social Ownership and Democratic Planning,” in *Feelbad Britain: How to Make It Better*, ed. Pat Devine, Andrew Pearmain, and David Purdy (London: Lawrence and Wishart, 2009).
